"No!" stormed Helga. "Why should she? Give up her youth and her happiness and her peace of mind because she thinks it's her duty not to leave that old woman alone? Why should she?"

"But she hasn't any peace of mind now," insisted Emanuel Lind gently.

And, Helga knew, that was true. But she could not bear the thought of Bess back there with Charity Wheeler. It was too much to ask of a girl! And yet—oh, what *was* right?

And then one day—the leaves had begun to turn and the grass on the bare slopes had become burnt golden-brown—Helga started out for the office and overtook Doc Davy from town.

Body by Fisher

Everything that *Everybody* Wants

A long, clean stride away from the hackneyed in motor car design. Months and months of pitiless testing and development engineering. Bodies created by master Fisher craftsmen. And the result—

★ ★ ★

—a stirring example of America's automotive supremacy . . . . the All-American Six. A car that rises above the commonplace like a lighthouse from the sea. A car with *everything* that *everybody* wants.

★ ★ ★

Power, drive, snap and staunchness. Litheness, speed and *personality*. The spirit of our breathless age expressed in a motor car.

★ ★ ★

You've watched it flashing by you. You've heard of its success. Now why not acquaint yourself with its many innovations? Why not see an Oakland-Pontiac dealer—enjoy the revelation of a ride?

NEW LOW PRICES

LANDAU COUPE $1045

2-Door Sedan $1045 | 4-Door Sedan $1145

Sport Roadster $1075 | Cabriolet $1145

Landau Sedan $1265

The New and Finer Pontiac Six, $745 to $925. All prices at factory. Delivered prices include minimum handling charges. Easy to pay on the liberal General Motors Time Payment Plan.

Authorities Urge AUTOMATIC MOTOR *Protection*

as the only *effective* means of fighting dangerous cold—and breaking car-owners of the costly cold-weather "choke" habit.

ENGINEERING findings show that cold is definitely responsible for 50 to 75% of all premature motor wear. Tests prove at 60° Fahrenheit cold strikes its first blow at unprotected motors.

"Over-choking" warns you!

Coughing, spitting noises and delayed starting are the danger signals. Out comes the "choke"—flooding cold cylinders and cylinder walls with raw gasoline. Glass-like metal surfaces are washed clean of the vital oil film of protection. Vital motor parts are exposed to grinding friction. Excessive dilution follows, fouled spark plugs, high gas consumption, extreme carbonization, corrosion and rapid cylinder wear. These are the troubles that bring *big* repair bills—troubles for which *cold alone* is responsible.

Winterfront regulates motor temperature

The radiator on your car was put there to waste heat—thus to prevent overheating in hot weather. An efficient radiator throws away 35 to 40% of the heat of the fuel. At 60° Fahrenheit there is no heat to spare, yet heat-waste continues through the radiator. Obviously, therefore, there is only one place to efficiently control motor temperature—that's at the radiator, where heat-waste occurs.

The motor car dealer who recommends and sells you a Pines Automatic Winterfront is considering your interests first. Take his advice. Your dealer will supply you.

Closes Itself when your motor needs heat.

Opens Itself when your motor needs cool air.

Pines Automatic Winterfront completely covers the radiator and remains closed until the motor is warm enough to operate without damage to vital parts. The shutters then begin to open, *automatically,* allowing the entrance of exactly enough cool air to maintain a scientifically correct temperature.

Important—The moment your motor stops, Winterfront shutters begin to close, automatically, and are fully closed while your motor is hot. Thus you are certain always of complete motor protection. There is no chance for dangerous neglect.

With a Winterfront on your car you "warm-up" in seconds. You lose the dangerous "choke" habit because Winterfront eliminates the need for it. Your motor starts quicker and easier with less battery strain. You enjoy a noticeable increase in gasoline economy—snug warmth inside your car—summer-time smoothness and flexibility in your motor.

Put on any car in ten minutes

Pines Automatic Winterfront is sold by automobile and accessory dealers everywhere. It is installed in less than ten minutes. Models for all cars—priced $22.50 to $30.00. Special models for Ford, $15; Chevrolet, $17.50; Dodge Four, $20. Slightly higher prices in the Rocky Mountain area and West—also Canada. Pines Winterfront Company, 424 N. Sacramento Blvd., Chicago.

Pines Automatic Winterfront is the only Automatic Radiator Shutter on the Market

It is automatic because—

There is no other way to assure you of timely, constant protection against the destroying force of cold. When cold strikes, Winterfront is *always* ready. You can't forget to operate it. There's nothing to remember. Its results are possible *only* because it is *automatic.*

148

PINES WINTERFRONT—*It's Automatic*

"'Lo, Helga, give me a lift?" he called. "The old flivver backed down on me. I always *did* like a horse. They don't run out of gas, nor do you always have to monkey at 'em with wrenches and whatnot. I've been up to see Charity Wheeler. . . . Now, there's a woman I admire. She's got a backbone! I told her six months ago that she might last a year—m vbe not that; but she goes right along as r nothing had ever happened. Yes, sir, she's got sand—that old woman!"

Helga felt her face sting. She did not know, afterward, what she had said to Doc Davy.

When she came to the Wheelers' house that day, she saw Grandma Wheeler out picking grapes off their vine over the arbor. Grape jelly . . . a year . . . maybe not that. Twenty quarts of cherries . . . grape jelly . . . Helga's mind was full of confusion.

After supper that night she said to Hilda and Anna, "You do the dishes tonight, girls; I have to go up to see Bess."

She hated her errand fiercely, but she was compelled to go. Her telling Bess became identified somehow in her mind with the lifting of that terrible look in Bess's eyes. The telling was, she knew, the spring to release Bess; it would let her go back.

The air was crisp and full of fall smells. But Helga was not aware of the world. She was pulling away from what she was going to do. Why, it would be like putting Bess back into prison! It was a prison, too! Why should it be right for Bess to go back to that domineering, snoopy old woman? What good would it do anyone? But, presently, she stood on the porch of the little tenant cottage and told Bess.

"*Oh!*" was all Bess said; but she said it sharply, as if someone had stabbed at her. Then quietly enough, "Thanks for telling me, Helga!"

She smiled at Helga a little, and there was more than thanks in her eyes; there was a sudden bond of complete understanding between them, so complete that Helga had a sense of being lifted up to a height she had not known existed in friendship. There was, too, a swift peace in the girl's face—a release and a freedom.

BESS and Ed went back to the farm. Folks up Sweden Hollow said Bess was a fool to do it. Grandma Wheeler pretended she was not glad to see them. She said things about their "knowing which side their bread was buttered on," and "being glad to eat humble pie." She kept on making remarks about Bess. Bess was no housekeeper, and never would be one. She couldn't make a light loaf of bread to save her life. She fussed over clothes when she ought to be housecleaning. She laughed when Ed didn't want to dress up of a Sunday.

Yes, Charity Wheeler kept on as she always had. She kept count of how many handkerchiefs Bess had in the wash, and she even read a letter or two of Bess's. But Bess didn't fly up in sudden bursts of half-hysterical resentment now, nor did she keep silent for days on end. She had been released from all that.

She helped what she could, knowing it wasn't much. She kept on "gadding," as Grandma called it (though Helga saw she only went when Ed was to be about the

"Difference of opinion makes horse-racing," is the immemorial proverb and auspice of the sport of kings. Yet for Man O' War who was indifferent to all but the victorious goal, king and stable boy rise to agree there was *no difference of opinion* when that super-horse faced the barrier.

No Difference of Opinion

When Supremacy is so Outstanding

In its repertoire of brilliant abilities, the New Hudson Super-Six asserts its supremacy in vivid performance facts that stand free and clear of opinion or debate.

Here is a new power in motordom—totally different in development and expression—totally new in range and efficiency—the smooth and mighty power of the steam engine delivered with silky ease and vivacity.

The basis of this great Hudson capacity is a new companion invention to the Super-Six principle which turns waste heat to power. Together they combine the highest efficiency in power generation and transmission ever achieved within our knowledge.

In the new Hudson motor, spark knock heretofore characteristic of the high-compression motor is eliminated, and ordinary gasoline gives the performance results sought through special and higher-priced fuels.

It is receiving the greatest public reception in Hudson history, because in all ways it is the greatest Hudson Super-Six ever built.

"Hot water or cold—it works swell with either!"

Next to my face I like Barbasol *best*

(with apologies to B V D)

Because it has such taking ways with the toughest beards.

Because it works so smoothly, swiftly, cleanly.

Because it leaves the face so youthful, cool and grateful—leaves the natural oils right in the skin—takes nothing away but the whiskers.

Here's the Modern Way of Shaving:

1. Wash the face (but leave it wet)
2. Spread on Barbasol (but don't rub in)
3. Shave!

No brush. No rub-in. No after-smart or sting. Quick relief from ingrowing hairs, sunburn, windburn, chap. How about a little Barbasol?

"Mister, you're next!" Try Barbasol three times, according to directions.

Barbasol

For Modern Shaving

house). She fussed over the few remaining flowers, the last marigolds and zinnias, cosmos and chrysanthemums. She put them on the supper table, but when Grandma Wheeler snorted at them, she had the courage now to say, laughing, "Now, you *know* they're pretty there, Mother Wheeler!"

She had never used to call her "Mother." She had not been able to, because Charity Wheeler had been so hideously different from her own mother, from all that mothers meant to her own mind. But now she did it, and felt yet more free. It was as if she felt the strength in that old body to be greater than she had known, and was compelled to respect it. For Grandma Wheeler still kept her secret to herself.

But there were days when she would sit nearly all the afternoon out under the maple with the baby in her lap. And once she said, "I wish you'd make some roll-jell cake for supper, Bess. You make that so good!" And one day she said to Helga, "Bess and I gets on better now. She don't seem quite so uppity—she's more willing to learn."

The gayety that had been quenched in Bess seemed to come back, suddenly unafraid. She ate more and slept better. She looked well.

IT CAME before the year was up. It was in late November, and Sweden Hollow was a valley of frozen ruts and bare, bleak trees. Grandma Wheeler sat by the kitchen stove, crocheting rags for a rug.

"Those colors are so pretty," Bess said once spontaneously.

"Yes, kind of cheerful," agreed Grandma unexpectedly. "I thought as how you'd like this for your room, mebbe. It's kind of like those curtains you put up!"

Something very bright and very sweet glowed up for a second in Bess's eyes.

"Oh—how good of you!" she said, in her quick, impulsive voice. And for the first time since the day Ed had brought her here, she bent over and kissed Grandma Wheeler swiftly on the cheek.

"Well, you been a good daughter!" said Grandma Wheeler, a little of her impatience still putting a tang to her words. Bess remembered that impatience afterward with gratitude. It was a proof that Grandma Wheeler was herself, even to the end; that her courage was like a granite rock.

About half an hour after that, Grandma let the rags drop to the floor.

"I feel kind of dizzy, Bess," she said. "I guess I've got to lie down."

Bess helped her to the couch. Then she called Doc Davy. When she turned from the 'phone, it had happened.

Helga saw the doctor's car there, and went up. Bess sat by the kitchen table, her fair head down, crying.

"It's come," she said to Helga, brokenly. "Oh, Helga—we'll miss her!"

That night, when Emanuel Lind had come down to the barn to help Helga unhitch, Helga said:

"To go back, Father . . . I can understand how she had to do that—but to go back *and love her*—!"

Emanuel Lind's worn face took on a gentle but authoritative dignity as he answered her.

"Well, that's *growing*, Helga!" he said.

P. A. never wears out its welcome

I'LL say this for P. A.—the longer you stay with it, the better you like it. One of those cases where familiarity breeds *content,* if you'll permit this little twist of an old saying. You can smoke it from morning to midnight, seven days running, and never tire of it.

I had a feeling that P. A. and I were going to become fast friends the first time I got a full breath of its fragrance. That was years ago, but I remember it as though it were yesterday. And the taste more than matched the aroma. I had never experienced anything like it.

Cool and comforting, like a breeze on a summer's day. Sweet and refreshing, like a little girl all dressed for Sunday-school. Mellow and mild, like a soft answer, but with a full, rich, satisfying tobacco body. Prince Albert never bites the tongue or parches the throat.

I get so much genuine joy and satisfaction out of this long-burning tobacco, I feel like telling every man I meet. One thing certain, if you have never smoked P. A., you can't have any idea what a lot of fun you can get out of that old jimmy-pipe of yours. Take me up on this!

P. A. is sold everywhere in tidy red tins, pound and half-pound tin humidors, and pound crystal-glass humidors with sponge-moistener top. And always with every bit of bite and parch removed by the Prince Albert process.

PRINCE ALBERT

the national joy smoke!

WHY MEN LEAVE HOME with half-clean faces

MOST fellows shave and bathe every morning, and yet go to work with half-clean faces.

Pore-dirt hides in *every* face. Millions of tiny, grimy particles fly about in the cleanest air. You can't see them; they're too small—so small, really, that they get worked down *under* the skin.

After a while, pore-dirt gives you a grayish pallor . . . like a fellow who needs a vacation. "But I can't see any pore-dirt on *my* face," you say. That's because it's *in* your face, not on it. Here's proof:

Send for the free tube of Pompeian Massage Cream. When it comes, first wash your face—then treat yourself to a quick, invigorating massage.

What happens?

Goes in pink, ROLLS OUT GRAY . . . The upper picture, taken under a powerful microscope, shows a section of skin *before* using Pompeian Massage Cream. Compare it with the lower picture, taken *after* using Pompeian Massage Cream. That's skin that really IS clean—Pompeian clean! See those dark marks . . . dried pellets of cream, gray with the pore-dirt that a few minutes' massage brought out. And remember that imbedded dirt couldn't have been washed free in a month of Saturdays!

Photomicrograph taken under the lens of powerful microscope showing section of skin before using Pompeian Massage Cream.

Photomicrograph of the same section of skin after using Pompeian Massage Cream. Compare the skin tone. Note the dried pellets of cream, dark with the pore-dirt that has been rolled free.

Give yourself a Pompeian Massage. Free your pores of sallow-toned dirt. It not only sets you up with a clean, confident feeling, but invigorates your skin with a fresh and ruddy glow that makes the others say, "Never saw you look any better, old man . . ."

FREE test convinces thousands

Pompeian is 60 cents at any toilet goods counter. We'd really rather you tested it FREE. Fill in the coupon and drop it in the mails—right now, while you are reading this message.

POMPEIAN MASSAGE CREAM

The Pompeian Company. Dept. 300-K, 595 Fifth Ave., New York.
Gentlemen: Please send me a generous trial tube of Pompeian Massage Cream . . . enough for three facial massages.

Gossip!

(*Continued from page 9*)

"The speaker must have been misinformed. Mrs. Guest and I have just celebrated our twentieth wedding anniversary, and we are now making plans, God willing, to celebrate our fiftieth. As to the liquor story, the fact is that I personally went dry long before the country did."

Thus I have come never to believe any tale. I have made it a rule never to repeat, even within my own walls, any story reflecting on man, woman, or child, or industry.

"Watch that man," said a friend of mine the other day, as I was starting a golf match; "I am told he is dishonest."

Now, nothing in that man's conduct from start to finish bore out that whispered bit of malice. I found him to be genial, thoughtful, and considerate. I enjoyed his company.

"Did you ever play with him?" I asked my friend later.

"No," he said; "I was simply telling you what I had been told."

"Well, don't tell it again, unless he cheats you," I said. "He has been made the victim of someone's malice."

All things considered, the tongue is the most unruly member of the human body. If I had my life to live over, and could know what my present experience has been, I should devote more time to learning tongue control. I should make speech my servant, not my master. I should make at least eight rules for myself and I think they would be these:

Speak pleasantly and courteously to all.
Speak with caution.
Never in the presence of strangers discuss the personal, social, or business affairs of another.
Never discuss my own affairs in public places.
Never utter offhand opinions of strangers. The smart tongue is the father of embarrassment.
Never repeat any bit of gossip which lacks confirmation.
Never tell anything to a known gossip.
Always be watchful of my tongue, but doubly watchful when angry.

I HAVE often wondered what the relationship is between the thought and its utterance. Why should the tongue seem so eager to give away the secrets of the mind? What is there about gossip which makes us all rush to repeat it?

If at a gathering of friends, I should say:

"I have the greatest car in the world; it hasn't a single weakness; it is finished perfectly within, and its motor is wonderful," I should probably start an argument. But not one of them would go over to their neighbors and repeat my statements unequivocally. But let me chance to remark:

"That's the last car of that make I'll ever buy. I've had nothing but trouble with it. The gears are noisy and it just eats up gas."

Within the week I'll be stopped on the street by people with the remark: "I hear you don't like your car."

Strangers, about to buy a similar car, will telephone me to get my opinion.

Pipe Smoker Waxes Poetic Over His Favorite Tobacco

Here is a bit of pipe-smoking sentiment pretty well expressed, in our opinion:

"A Prescription"

Have you ever noticed
right after a meal
How tired and lazy
you always feel?
I'm telling you folks
it isn't a joke,
It will freshen you up
if you try a good smoke.
But whatever you do
these lines you must heed,
There's a certain tobacco
of course, that you need.
It's packed in a tin,
the tin's colored blue.
Not only the smoking
but the chewing kind too.
Of course if you never
are bothered this way,
Just keep the prescription
for some other day.
Ask for tobacco,
the best that's on earth;
To shorten the story,
just call it "Edgeworth."

Chas. J. Butler
Owensboro, Ky.
Feb. 2, 1927

To those who have never tried Edgeworth we make this offer:

Let us send you free samples of Edgeworth so that you may put it to the pipe test. If you like the samples, you'll like Edgeworth wherever and whenever you buy it, for it never changes in quality.

Write your name and address to Larus & Brother Company, 3 S. 21st Street, Richmond, Va.

We'll be grateful for the name and address of your tobacco dealer, too, if you care to add them.

Edgeworth is sold in various sizes to suit the needs and means of all purchasers. Both Edgeworth Plug Slice and Edgeworth Ready-Rubbed are packed in small, pocket-size packages, in handsome humidors holding a pound, and also in several handy in-between sizes.

To Retail Tobacco Merchants: If your jobber cannot supply you with Edgeworth, Larus & Brother Company will gladly send you prepaid by parcel post a one- or two-dozen carton of any size of Edgeworth Plug Slice or Edgeworth Ready-Rubbed for the same price you would pay the jobber.

[*On your radio—tune in on WRVA, Richmond, Va.—the Edgeworth Station. Wave length (254.1 meters) 1180 kilocycles.*]

Salesmen for other cars will start dropping in on me to induce me to change vehicles. The man who said "Even the walls have ears" knew what he was talking about. He had probably whispered something in strictest confidence to a human leak.

If business men could get rid of the gossips about the office, the store, or the factory, they could double the efficiency of their institutions.

But always the sharp eyes and the quick ears and the glib tongues are at work disturbing the morale of the force.

INTO one of our prominent stores one morning walked the competitor of the proprietor. He remained in the office of "the boss" for almost an hour. At the noon luncheon that day tongues were busy. The store was to be sold. There was to be a merger of the two stores. One place would be closed up entirely. The present manager would be discharged. The other store had been losing money. Bill Blabb had known this was coming for weeks. He had heard So-and-so telling So-and-so that the boss had decided to get out of business. Out on the street went the story, growing larger and larger every minute, until it finally got into the newspaper offices. Reporters visited both men and got prompt and definite denials.

"Ridiculous," they both said, and ridiculous it was; but it had disturbed two great organizations, and kept them disturbed for a week. The meeting of the two proprietors had nothing whatever to do with business. Both men were serving on a committee to raise funds for their church, and that one hour's conference was merely to discuss plans for the campaign.

Jumping at conclusions is the favorite sport of the gossip. It's a dull day in Detroit when a new automobile merger isn't being made or Henry Ford's plans are not being told by someone not connected with the Ford Motor Company. As a matter of fact, I think you can get more misinformation in Detroit about Henry Ford than anywhere else, unless it be in the smoking compartment of Pullman cars. I have known Mr. Ford a long time, and I have never known him in all those years to tell a gossip anything he did not wish repeated, or let him see anything he did not wish him to see. A lot of people who think they are close to him are miles away from him.

If the human tongue could be controlled, life would be a different and easier proposition than it now is. If Kaiser Wilhelm had not talked so much and so loosely, the World War might never have happened. The history of his reign is filled with tense situations his busy tongue alone produced. All his diplomats could not teach him what to say and when to say it, nor undo the mischief which his thoughtless conversation produced.

If the human tongue could be controlled the divorce courts would have less to do; so would the police; so would the doctors; so would the undertakers. One bit of reckless conversation has started neighborhood rows, broken up churches, disrupted business, and stopped progress everywhere.

Only the other day a great organization of business men ceased to function. It was a group formed for the betterment of a certain industry. It began as a co-operative society and it ended in a free-for-all fight.

"Can't this difference of opinion be reconciled?" I asked one of the men interested.

He looked at me rather strangely, and then said:

"The original trouble was trifling, and could easily have been straightened out. But too many bitter things have been said by both sides. The association has been literally talked to death."

When I began to play golf, I soon discovered that a golf ball could not properly be hit in the way I was attempting to do it. I took lessons from a professional, and found that I had to train my muscles in a certain way to obtain the result I desired. It was unnatural, and at first difficult. Try as I would, my hands and shoulders and wrists and arms and hips would not perform in the way I wished them to.

But I persisted, and although I am not a good golfer now I can hit a ball as it should be hit. I can hold a club properly, and I can swing it through. My shoulders don't misbehave now as often as they used to, and when I go out on a course to play, any golfer has only to look at me once to know that I have been trained in the game.

If I have trained contrary wrists and hands and arms and feet and shoulders and hips to function in golf as they should, why should I not also be able to learn to control my tongue? Why should I keep on letting that unruly member of my body violate every rule of common sense and decency? I have no trouble keeping back the smart retort in the presence of the man who could black my eye; surely then, I could keep it back in the presence of those I don't fear. If I am smart enough to save myself pain, I can be smart enough to save others needless pain. I don't have to lend my tongue to rumor or gossip or scandal. If in golf I have made myself keep my eye on the ball, why can't I make my tongue keep off the topics which are loaded with trouble?

ONE warm night in June I was sitting on the hotel veranda in Albion, Michigan. A young traveling salesman sitting next to me began the conversation by discussing the meals, not only in Albion but also in Lansing and Owosso and St. Johns and several other places. It was interesting to get the opinions and comments of an epicure, and I listened attentively.

"By the way," said he, "I see that Edgar Guest is talking here to-night."

"That so?" said I. "Are you going?"

"I wouldn't walk across the street to hear him," he replied.

"Neither would I," I said; and it seemed to please him that at last he had struck a topic on which we were in agreement. Just then the bell boy came through, paging me, and as I rose at the call of my name and started to go to the telephone his mouth fell wide open and his eyes almost popped out of his head.

There is some excuse for the man who takes a check from a stranger. He at least thinks it is all right. But the man who insists on giving himself away to strangers has himself only to blame.

Behind Nearly Every Lie There Lies a Fear

(*Continued from page 15*)

e have jam you get none, because you e yours all at once."

As was to be expected, Buddie cried piously. He loved jam. But there was certain justice about the arrangement hat bade him accept it, and steal no more m.

It is the adolescent children, so full of ger altruistic strivings, caught in the ruggle for spiritual growth, that make e errors of judgment. Such children eed the most tactful and sympathetic andling. Let me illustrate this point y telling you about two girls in their rly teens whose mother was far from ell. They saw her valiantly trying to de her pain and discomfort, and longed help her. One morning she told them hat she must go to the doctor—an all-y trip—and asked if they could stay one until she returned.

The girls soon completed the tasks their other had laid out for them, and still long day stretched before them de-anding occupation.

"Let's wash Father's flannel shirts," id Frances, the older one.

The boiler was put on and filled with ater and the six flannel shirts were rubbed on the board, well soaped, and unged in the boiler to boil "good."

When the washing was hung on the line e young laundresses stood back and oked at the dejected, dripping things, d shook their heads. "They look funny, n't they?" said Frances doubtfully.

"M-m-m. Kind of skimpy," replied etty.

"Well, they'll stretch," said Frances pefully.

When the tired mother returned in the ening the first thing that caught her e was the line of shrunken shirts.

Sick and tired as she was, the mother alized the unselfishness of the girls' tentions. "It was fine of you, my dears," e said, "to try and help me; but next me you'd better wait until I come home efore you do any washing. It's too big an ndertaking for little girls. But I love u for thinking of me."

HOW can I teach my son good manners?" a mother asked me. "If I have rrected him once I have corrected him thousand times. He puts his fingers in is salad, forgets to take off his hat, yells rough the house as though he were in e playground, interrupts people, and ehaves like a little savage."

I told this mother to cease from worry-g. Parents all over the world are con-onted with this same problem as the nimal spirits of their children (more arked, however, in the boys than in the irls) develop and demand expression.

There's only one thing to do: Keep ight on teaching your children good anners. But be sure that you, their arents, are setting them an example orth following. Children when they are rowing up are little savages. It's a phase hey must pass through if they are ordi-ary normal, healthy children. All that ou can do is to try to instill courtesy and houghtfulness in them by constant attention to their conduct and by repeated corrections of their lapses.

Now, Pudge was eleven years old and sturdy. His heart was in the right place, but his manners were not of the little Lord Fauntleroy type. He forgot to give his mother a chair, forgot to pass the bread, forgot to tone down his voice, forgot to close the door softly, forgot to wash behind his ears. In short, he behaved just like the healthy little animal he was. And his mother shed tears over her apparent inability to make any impression.

One afternoon, Mrs. Curly, who lived down-street, came to call, and in the course of her conversation said, "Tell me how you manage to teach Pudge such exquisite manners. For a little boy, he has the nicest manners I ever saw. I was telling my husband about him only last night. If he meets me on the street he raises his hat. He opens the gate for me and closes it, as if he thought it a privilege. When he was at a little party the other afternoon I watched him. He behaved perfectly from the time he sat at the table until he made his bow to his hostess and thanked her for his pleasant afternoon. How in the world do you do it?"

NO ONE was more surprised than his mother to hear of Pudge's good behavior away from home. And yet this is a common enough "miracle." It would seem that the familiar routine of home dulls children's minds to the need of practicing courtesy. Home to them is a place where "company manners" are to be laid aside, just as we grown-ups lay aside formal dress and slip into something comfortable. Learning manners is work done under high pressure. Only with practice do good manners become ingrained.

School life, too, brings its special problems. Some children take to school as ducks to water; others have to be broken in gently to its routine and discipline. How many times have I heard parents complain about their children's lack of interest in school work; their day-dreaming, lack of concentration and half-hearted attention.

Of course, the first thing to be done in case of any school difficulty is to make sure that the child is physically fit. An eye the least bit below perfection, an ear slightly dulled, a spine out of true, a stodgy liver or balky stomach, a gland working over or under time, will make learning difficult or impossible. Have the child examined physically and mentally, and then proceed with the school work.

I am assuming that the disinterested, dreaming, wandering child is physically fit. Why then doesn't he pay attention? The answer is, he does. It is impossible for a normal-minded child *not* to pay attention. The trouble is that the teacher does not *hold* his attention.

In the beginning, attention is involuntary. The child is obliged to notice the thing that is placed before him. If it interests him, if it makes him curious or eager he will dwell upon it, and then we say he is interested. If that interest is held, his mind absorbs it and the idea

Follow trails where cars can't go!

MILES from traffic jams along a quiet country road with the glorious scenes of a summer's end! Back-woods hunting grounds along winding trails or distant towns but a short spin away!

Ride comfortably *for only one cent per mile* on a Harley-Davidson Single—the famous mount that travels 80 miles on a gallon of gasoline!

New 1928 model has Fore Wheel Brake—doubled safety. And 12 other outstanding improvements that make this mount the world's greatest motorcycle value.

Price, complete, only $235, f. o. b. factory. Also Twin cylinder models in a wide range of prices. See your local dealer for demonstration—send coupon for catalog.

When your mirror says "Coated Tongue" ..*there's trouble ahead!*

YOU remember the physician's first words when you call him in—"Let me see your tongue."

He knows that almost invariably the furry tongue, and the unpleasant breath that go with it, warn of intestinal stoppage, the real cause of many, many ills.

People who want to keep fit know this too. So there's a fine health habit growing up among them—each morning they look at the tell-tale tongue. *When it is coated they take a refreshing, sparkling draft of Sal Hepatica, the approved effervescent saline.*

Sal Hepatica *promptly* and gently rids the intestines of the products of waste the natural way—by releasing the secretions of water in the intestines.

When you take Sal Hepatica, gone are the headaches—the feeling of fatigue,—and all the other enervating symptoms of intestinal sluggishness.

Sal Hepatica not only corrects intestinal stoppage—it is beneficial, too, in the treatment of rheumatism, hyper-acidity, colds, biliousness, and disorders of the liver and kidneys.

For Sal Hepatica contains the same health-giving salines as the waters of the famous European spas where so many people yearly go to "take the cure."

And just as you drink the waters at the spas, you take Sal Hepatica half an hour before your meals. Simply dissolve it in a glass of water—you will like its bubbling, sparkling qualities—its bracing tang.

Take Sal Hepatica when you need it. It is helping to keep millions of people internally clean and free of the poisons of waste.

Send for our free booklet that explains more fully how Sal Hepatica corrects intestinal stoppage and relieves other common ills.

Please address BRISTOL-MYERS CO.
Dept. L-117, 71 West St., N. Y. C.

Sal Hepatica

takes on a personal meaning and becomes a part of him. In other words, his powers of concentration are brought into action, and are coupled with a will and a purpose to learn. That sums up the complete learning process in a few sentences. The mind repeats that round with increasing power until it is the habitual process of a fully released and cultured mind.

When a child fails anywhere along the line of the learning process one must search for the cause of the break, and adjust matters. It may be because he lost the first point of the lesson. That will make the second one unclear. And nobody can be interested in what he does not understand!

IT MAY be, too, that a child loses interest in a lesson because it is beyond his mental growth. Sometimes work is given too soon, or too late, or it is work outside his field. But it may also be that the child is just plain lazy, and objects to making the necessary effort for the accomplishment of the task. When this is the case he must be held down to his work in spite of his struggles to escape. Every bit of work we do, no matter how much we enjoy doing it, has one hard place, one phase where discouragement and doubt enter, where drudgery must be borne with whatever patience and cheerfulness we can muster. Children must learn to face that condition and conquer it. It is the race-old struggle of the mastery of the spirit over the flesh. Its achievement means happiness and success; its non-achievement spells failure and regret.

A mother said to me recently, "Phil wants to leave school. He is in the last grade of elementary school, but he hate s grammar and won't look at his book. Of course he has a deficiency in it, and that will prevent his graduation. He wants to end his education and go to work. What can I do with him?"

This is another common prob'em that parents are constantly asked to meet.

In ninety-nine cases out of a hundred the child who reaches the last grade in elementary school with a passing grade in all but one subject is shirking. Grammar is drudgery and, to the adolescent child, a heartless imposition put upon him by carping teachers. If the child is permitted to have his own way, he will pay dearly for it all his life. We who know what it means must help him bridge the gap between his slumping, selfish being and his growing, achieving self.

I told Philip's mother to make it plain to him that he was going to stay in school until he made his grade in grammar. "But," I went on, "you must help the lad get a grip on himself. Sit down beside him when he starts his home work and see him through his grammar lesson. Insist that he do it first. When that's off his mind he will be much happier. Stick to this routine night after night; confer with the teacher, and get her to help you by sending home his papers and study topics. And, above all, praise him for each sign of effort and success. Once he masters grammar, he will like it. We all like doing what we can do well, and it's only human to shun work that we do badly. We really have nothing on Philip."

I have found that the kind of study a child does affects his power of concentration. Few of us can concentrate on what we are doing while in the bosom of the family. We must have isolation and freedom from interruptions. But it happens that isolation and quiet are about the last things a healthy child desires. He wants to be in the thick of things, sharing in all that goes on. But if he tries to study in the midst of the bustling activity of the family living-room he will acquire a scattered habit of mind, lack the power of concentration, and grow into the type of pupil to whom persistent effort is positive pain.

Let's take the case of Archie, who in his first year at high school has a deficiency in algebra. If we could listen in on Archie's home-study period this is what we would hear:

"Now, Archie, you must go to your own room where it is quiet, and do your algebra. You've a deficiency in it and it would be dreadful to fail."

"Oh, Mom, I won't fail. I can study down here just as well. I won't pay any attention to anything. Let me stay."

"No; you can't study with everything going on here."

"Aw, Mom. It's cold up there. I'll freeze if I have to go up there. I can study here—"

"All right. But remember. The first time you stop work you go upstairs, cold or not."

Archie unstrapped his books on the living-room table. "Did anybody use my fountain pen? Kit, did you? Did you see my pen?"

"No. How would I see your pen?"

"Well, you borrowed it the other day. Oh, here it is. Oh gee, I forgot to bring home any paper! Mom, can I go down to Sam's and get some paper?"

"No. You've wasted time enough. Use what you have."

"It isn't the right kind. Teacher won't take it if it isn't the right kind. Can't I get some?"

"No. You can't. Use what you have."

SILENCE settles down on the household. Archie opens his book and scowls. "Pop, listen to this. I can't do it. If a man starts at noon going four miles an hour and another man—"

"Archie! You keep still. The teacher said you knew how to do the work, and that you must help yourself. Now don't speak again until you have finished."

Archie reads along in a muffled undertone, "If a man starts—gee. I don't know anything about these silly examples. She never explains anything to us."

The doorbell rang, and Archie was at the door before its echoes had ceased. "That you, Mac? Finished your home work? I got my algebra to do. Yea. I can finish it in five minutes. Wait till I ask. Mom, can I go over to Mac's? I can do these examples in five minutes when I get home. Can't I, Mom? Aw, gee!... No, I can't go. See you to-morrow."

Heavily he drags himself to his chair, and gloomily looks into space.

"Get on with your work, Archie."

"I can't. This stuff is awful hard."

"You just said you could do your algebra in five minutes," said sister Kit with devastating calmness.

"You mind your own business. What do you know about it? You'd better study your own lessons."

For Trips of Good Cheer!

At this season, when the motor car is so much in demand, the woman driver will especially appreciate the service she receives from Firestone Gum-Dipped Balloons. Any trip, anywhere, is taken with added confidence—a feeling of security and comfort which leaves her mind free and ready for the holiday occasion.

She chooses Firestone Gum-Dipped Balloons, desiring to take no chances on skidding over wet, slippery pavements. The tread is scientifically designed to give a sure hold and to flex easily with the carcass. The instant response to wheel and brake completes her confidence and makes her more efficient in handling the car.

Firestone Balloons are made stronger and more flexible by the Firestone process of Gum-Dipping. They give many thousands more miles, with freedom from delay and repairs. The Firestone Dealer is prepared to give expert suggestions and aid on the subject of tires. He will be glad to explain why you and your family should have the added benefits (at no added cost) which these "Better" Tires give.

At noon—each day

JAPAN TEA

Your most restful drink

There is pleasure in its taste, of course, in the fragrance and flavor that only green, unfermented tea can have.

But the greatest delight in drinking Japan Green Tea is in the restfulness it gives you.

Try it at noon. Sit back for ten minutes after luncheon and *linger* over a cup or two, steaming hot. Relax.

You'll get up refreshed and rested, ready for a better afternoon of work or play.

Japan Tea is tea at its best—tea in its *natural* state, uncolored and unfermented, with all the flavor-laden juices of the fresh leaf preserved by immediate sterilization.

Specify Japan Green Tea when you buy. Packaged for the home under various well-known brands. Several grades and prices. The best you can buy will cost you only a fraction of a cent a cup

"Archie, that's about enough. You did your algebra correctly last night. Now, you go right up-stairs. And you are going to do those examples and the rest of your lessons if you sit up all night. I've made up my mind. Now up you go."

All that Archie needed was the habit of retiring to his own room for his study period, and a little supervision of his work. His attention was constantly attracted by what was going on around him; his interest was scattered, and concentration was impossible, because he was wishing to do a host of things outside the field of his work.

Nobody knows what a child may turn out to be. Family tradition is not decisive. He is not a combination of his mother and father but rather a composition of all his ancestors. He is a new organization of old material, and as much a mystery to himself as to his people. Again the principle of education shines through the chaos. Let him follow each phase of his growth to its limit. Each feeds the succeeding one, and the combined growth strengthens the complete expression.

Few children know what they intend to do for a living before they have completed adolescence, therefore it is usually better to give them a general cultural course until graduation from high school. Then, if they are not going directly to college, let them work for a year or two at some gainful occupation in which they gather experience in industry, in meeting people, in facing emergencies, and in applying their knowledge.

Usually, after a year or so of this training, a child has a clearer idea of what he wishes to do. Out of his wish evolves his purpose and the will to carry it through. Higher education without the creative wish and the accompanying purpose and will comes dangerously close to waste.

I hope I have made it clear that rearing a child is not the simple thing that it appears to be. It is not a matter of saying "Do this and do not do that, and all will be well." It is the complicated struggle of a soul striving toward a height which even the best and strongest among us glimpse but dimly.

A child must develop his own power through experience and suffering. You cannot give him the one and spare him the other. But what you can do is to stand tolerantly by, and with sympathy and understanding help him in his fight against ignorance, interpreting his experiences for him in the light of our own wider and richer life.

And, above all, hold fast to your faith that he is here for some destined good, some high calling, and he will, in good time, justify that faith.

"FIVE Years Ago He Tried to Give Away Half His Business" is one of those business romances that are always occurring in American life. The hero is William A. Burnette, who, starting out as an uneducated "poor-white" teamster in the Tennessee mountains, became a minister, and wound up as the president of an organization the sales of which amount to about one million dollars a month. The message of his life is told in a few simple words: "When a man tries, really tries, a way is made clear."

Getting Ready for Winter

(*Continued from page 63*)

have more than the average of colds, pneumonia, and other infections. In midwinter, if your windows are not frosted, get busy—something is wrong.

Another way to test your indoor atmosphere during the winter is to bring some flowers into the room. Most of you folks live in an atmosphere during the winter in which flowers will not grow. When your plants begin to die, if you go to the florist and make inquiry as to what is wrong, he will probably explain that your temperature is too high and the humidity too low.

Human beings thrive best in the atmosphere that plants grow well in—temperature about 68 to 70 degrees Fahrenheit, humidity 40 to 50, and with a reasonable amount of sunlight.

And in this connection, let us remember that the violet rays, the wonder-working rays of sunlight, do not pass through ordinary window glass. If you want a baby to thrive, it must be out-of-doors, or before an open window where the sunshine strikes it directly. The sun parlor is a joke. You cannot get a real sun-bath with light that comes through ordinary glass, since it filters out the most important rays.

The temperature of about 68 degrees Fahrenheit for indoor living seems to be that at which there is less tendency for the skin to perspire, and therefore less danger from chilling if suddenly exposed to drafts. It isn't fair to ruin the health of the entire family in order to make comfortable one chilly or elderly person who demands a temperature around 80 degrees. Far better that the chilly or elderly one should put on extra garments and habituate himself to the enjoyment of a healthful temperature.

Occasional changes in temperature are good for the health. It isn't healthful to live in a perfectly equable temperature. The human skin should be accustomed to frequent changes in temperature. It serves to keep the circulation toned up.

Now let us turn our attention to the prevention of some of the infections and other disorders which are so commonly associated with the winter season. More than one half of the health problems of the winter season can be solved by a sane régime as regards exercise, diet, clothing, and humidity; but it will not be amiss to speak in more detail of the best ways to side-step colds, sore throats, influenza, pneumonia, and other winter ailments.

In general, a cold is an infection. While colds are not confined to winter, since we do have summer colds, the summer variety generally belong to the hay-fever class.

Our winter colds are primarily due, in

t hasn't a single belt, fan or drain pipe . . . .

It always works perfectly and never needs oiling . . . .

NE of the first things at made me favor this eneral Electric Refrigerator is the fact that it needs no ling. All you have to do is ug it into an electric outlet ..and then you can forget It hasn't any belts, drains, fans, stuffing boxes.

ut, of course, the thing that ap- eals to me most is the way it has cut y housekeeping job. I only market rice a week now, because I have plenty space and just the right temperature keep all sorts of foods in perfect con- tion.

Ve go away for week-ends without hav- g to worry about ice. Everything is ady for use when we get back.

ooking has become easier, too. Des- erts, which used to be the most difficult art of the dinner to prepare, now are eautifully simple—and ever so much nore attractive.

xpensive to run? Not a bit. It uses ery little current to make all the ice we need and give us perfect refrigeration. And, do you know, it's quite remarkable the way the top of this box never gets dusty. The circulation of air through those coils seems to drive the dust away.

For fifteen years the vast laboratories of General Electric have been busy developing this truly simplified refrigerator. Four thousand models of nineteen different types were built, field-tested and improved before this new-day refrigerator was brought to its present simplicity and efficiency.

You will want to see the models. Let us send you the address of the dealer who has them on display and booklet 11-A which is interesting and completely descriptive.

WILL YOUR NAME BE ON ONE OF THESE?

$10,000 *prize contest*

ONLY a few weeks more and Postum's $10,000 prize contest comes to a close. One thousand and one money prizes will be given away—prizes simply for writing letters! These prizes will be won by persons like yourself. Some will win $1000 each—others $500! Why not be one of them?

All that is wanted is a letter on any one of the three Postum subjects given below.

Others have told us, before this contest started, how they used Postum in place of caffein beverages for thirty days—and became regular Postum users forever after! "I sleep better"—"No more indigestion." Typical comments. Give us the results in *your* case—whether you are an old-time Postum user, or only a beginner. Hundreds of prizes for the best letters!

Or write a letter about Instant Postum made with milk for children. Mothers have written: "My little girl has gained weight wonderfully"—"My children couldn't drink milk until I discovered Instant Postum made with milk"—"No more worries about coffee for the children in *this* family!" Win a prize by writing a good letter!

In addition, hundreds of prizes for letters on "How I make Postum—and why I like it best made *my* way." Some Postum enthusiasts won't have anything but Instant Postum, prepared instantly in the cup with either boiling water or hot (not boiled) milk. Others like Postum Cereal much better—prepared by boiling, or in a percolator. Some people like Postum strong, others weak, others "in between." Just as with other hot drinks, individual tastes must be suited in preparing Postum. How do you prepare Postum? A thousand dollars for the best letter!

The prize money is waiting to be won! Don't let another day go by! Read the rules on this page, and enter the contest!

Subjects and Prizes

1. **"What the 30-day test of Postum has done for me."**
   (Letters on any subject not to exceed 300 words in length)
2. **"Why I think Instant Postum made with milk is the best hot drink for boys and girls."**
3. **"How I make Postum—and why I like it best made *my* way."**

For the best letters on *each* subject: First prize, $1000; second, $500; third, $250; fourth, 3 prizes of $100 each; fifth, 4 prizes of $50 each; sixth, 5 prizes of $25 each; seventh, 10 prizes of $15 each; eighth, 25 prizes of $10 each; ninth, 35 prizes of $5 each; tenth, 35 prizes of $3 each; eleventh, 68 prizes of $2 each; twelfth, 146 prizes of $1 each for first and second subjects, 145 prizes of $1 each for third subject.

RULES

1. You may write on any one or all of the subjects, and submit as many entries as you care to.
2. Write the subject at the top of the first page of each manuscript you submit.
3. Write plainly on one side of the paper only. Neatness counts.
4. Write your name and address on each manuscript.
5. In case of ties, each tying contestant will be awarded the full amount of each prize tied for.
6. Contestants agree to accept the decisions of the judges as final.
7. No communications will be acknowledged, and no manuscripts will be returned.
8. Employes of the Postum Company, Inc., are not eligible.
9. Address envelopes to "P. O. Box 594—F, Battle Creek, Michigan."
10. Manuscripts must be received before 5 p. m. December 31, 1927.

(Prizes will be awarded, and the names and addresses of prize winners announced as early as possible in 1928.) This contest is not limited to residents of the United States—it is open to everyone everywhere.

THE JUDGES

U. S. Senator Royal S. Copeland, M. D., former Health Commissioner of New York City; Alice Bradley, Food Editor, Woman's Home Companion; Sarah Field Splint, Home Economics Editor, McCall's Magazine.

© 1927, P. Co., Inc.

Postum is one of the Post Health Products, which include also Grape-Nuts, Post Toasties, Post's Bran Flakes and Post's Bran Chocolate. Your grocer sells Postum in two forms—Instant Postum, made instantly in the cup, and Postum Cereal, the kind you boil. If you are not one of the millions who now purchase Postum, you may obtain a sample of either Instant Postum or Postum Cereal by addressing the manufacturer.

my opinion, to the drying out of the respiratory mucous membrane by indoor living in an atmosphere too low in humidity. Enlarged turbinates, crooked septa, diseased tonsils, adenoids, polypi, sinus infections—all these are predisposing causes of colds. The circulation of the blood, the so-called general vitality of an individual, undoubtedly has something to do with this tendency to catch cold. I find in the study of my patients who are predisposed to colds, that it is a different group of causes in nearly every case.

The first thing to do to prevent colds is to try to be in good health, and the next thing is to try to improve the circulation of the blood, and this is where exercise and bathing come in. People who have cold hands and feet may do something to get ready for winter by the morning cold bath, or, still better, the alternate hot and cold shower. The best way is to take a shower bath, say a minute or two of hot, and then twenty or thirty seconds of cold water; alternating this way half a dozen or even a dozen times, beginning with the hot and ending with the cold. This tones up the circulation.

People who do not enjoy the morning cold shower can improve the circulation by the employment of dry friction, taking a Turkish towel and rubbing the skin until it is good and red. Regular exercise also is good for the circulation—it promotes elimination, and it helps to prevent colds.

We have learned of a type of cold which is recurrent and which is caused by too little calcium in the blood. Now, calcium can be taken in many forms, but one of the best ways to take it is in connection with the ordinary table salt. This is particularly to be recommended if you live in a goiter belt, for then you probably have too little iodine in your water, and it is best to use the brand of salt that some states now require by law to be supplied to their citizens. I refer to the ordinary table salt which contains both iodine and calcium.

IF YOU are a victim of colds, see a nose and throat specialist early in the fall and make sure that your nose is in proper condition. It is a waste of time to take baths, exercise, calcium, and vaccines to prevent colds which are due to a chronic diseased condition of the nose and throat.

Remember that there is always danger of chilling, and consequent colds, if your undergarments are wet with perspiration, and you go from a warm room out of doors into lowered temperature.

One young housewife was seized with a severe pain in the head, which proved to be sinus trouble, and in going carefully into her history we found that when she made frequent trips to the back porch to deposit paper or garbage, she always stepped out of an overheated kitchen into the cold, with no protection for the head or shoulders. She contracted a serious and painful sinus infection as a result of her carelessness.

Let us not forget that many of our winter colds and other infections are caught from crowds. When epidemics are prevalent, and when you are feeling tired and a little below par, stay away from crowded gatherings.

If you expect much benefit from nose ointments, or throat gargles, they must be used in the very early hours of a threatened cold. These preventives are most effective

Digitized by Google
Original from STATE UNIVERSITY SYSTEM OF FLORIDA

en they are used in the so-called dry ge of a nose and throat infection; that the stage in which there is a dry or ling sensation in the mucous mem- ne of the nose and throat. After cous discharge starts, or after the oat has been sore for a number of rs, I very much doubt the efficacy of se remedies; nevertheless, we continue ise them and they may do some good.

Certain people are born into this world n poor and unstable skin circulation. w, some people can almost cure them- es of this cold hands and feet tendency, others cannot. Some of you who read article will always have cold hands feet; but this doesn't mean the blood oor or that you have anemia. It means t, for some reason, the blood vessels of r extremities do not move the blood und with sufficient vigor to keep a h, warm supply in the skin.

Exercise is good for this condition, but are not going to cure it. You are g to learn how to get along with it. are going to learn that your arms and s must be clothed (during the winter) a le more warmly than the average per- 's, and you will in time learn how to rcome this handicap, and will see that n no way predisposes you to catching quent colds.

HIS question of circulation brings up the problem of winter bathing. I be- e that the average individual gets along y nicely with two or, at most, three rm cleansing baths a week. Avoid tak- baths too hot, for by failing to cool m down you set up a profuse second- perspiration. It is chilling from this rspiration after going to bed or dressing it makes so much trouble.

I have already paid my respects to the rning cold bath. I don't believe in ad- cating it as a general practice for every- dy, and I see no reason why people who not like them should take cold baths as natter of duty. Certainly something is ong with the morning cold bath if you ve headaches following it, and are lly until noontime. You probably can oid these unpleasant after-effects if you e a hot bath just before the cold ower, or if you will take a little exercise fore your cold shower and perhaps a le afterward—not enough to start per- ration.

I am far more interested in exercise as a nter health practice than in special ms of bathing; that is, for well people. m saying nothing against electric-light ths, sun baths, and other treatments at your physician may advise because u are suffering from some ailment.

Neither do I approve of such insane actices as breaking the ice in order to ke a winter dip; or sending the "kiddies" t in zero weather with socks and bare ees in order to "harden" them. Send e children out to play every day during e winter; but dress them sensibly.

Among other common ailments which dict us in winter are chapped hands and s. Individuals with dry skins are par- ularly addicted to them. Much can be ne by way of protection by the use of ld creams or other ointments which will otect the skin from the wintry blasts.

If these chapped conditions are allowed go on sometimes eczema develops, and zema is very hard even for doctors to

about hair health

If poetic promises would grow hair there needn't be one bald man in the whole forty-eight states! But magic aside, what are some unvarnished *facts* about the day-to-day care of the hair?

The care of the hair is not a new subject. Doctors have studied it for years. As the makers of Packer's Tar Soap, we have studied it with doctors for years—over fifty years. Specialists have always recognized that pure pine-tar was very beneficial to the hair. In their books on the care of the hair and skin they have always recommended pine-tar.

The difficulty was that pine-tar alone could not be conveniently applied to the scalp. It remained for Daniel Packer, 60 years ago, to successfully incorporate pine-tar in a soap—Packer's Tar Soap. And ever since doctors have been recommending Packer's Tar Soap —largely because of the healthful qualities of the pine-tar in it.

If you talked to a doctor today about guarding your hair, he would probably tell you something like this: In the care of the average head of hair there is just one real secret. Wash it frequently with a fine soap like Packer's and —massage the scalp.

A hair soap, of course, should yield a mountain of lather—at the double-quick. Packer's does! And a great many men tell us that the piney fragrance of this willing Packer lather makes a shampoo fun—really!

So, if you suspect magic promises but wish to give your hair as fine and intelligent care as it can get, outside of special medical treatment, we suggest that you get a cake of Packer's Tar Soap in its metal box and begin to give your scalp the benefits of weekly Packer shampoos.

Send 10c for Sample and Manual

For 10c (stamps or coin) we will send you a generous sample of Packer's Tar Soap and a copy of our new Manual, "The Care of the Hair." This profusely illustrated 28-page book presents the most scientific thought on the care of the hair; suggestions for the care of dry hair, oily hair, falling hair and dandruff. Fill in coupon, clip and mail.

THE PACKER MFG. CO., INC., Dept. 6-K
Box 85, G. P. O., New York, N. Y.

cure. The remedy that will be helpful to one person doesn't always help another. In the case of the eczema of children, and even adults, ordinary crude coal tar is perhaps the best home remedy. It is employed as follows: Crude coal tar, 8 parts, and zinc oxide ointment, 60 parts. This is spread in moderate amount over the affected part, which is then bandaged for twenty-four hours. It is discoloring for the time being, but if this is applied as directed it is a simple and effective remedy. As little water as possible, or none at all, should be used in cleansing the affected skin area. Use olive oil instead.

Ordinary chapped hands will respond to simple measures. I know of nothing better than dilutions of glycerin, using one part of glycerin to four parts of water. This should be applied after each washing.

The use of a plain, uncolored lip stick, procurable at all drug stores, will help prevent chapped lips. It should be applied when going out in the wind and cold.

A great many persons, especially if they are above thirty-five or forty years of age, and live in an atmosphere that has little humidity, suffer with an intolerable itching of the skin, which often keeps up until the month of March arrives. Now, I have used many remedies for this "winter itch," but I have found the following program to be the best for the average individual: Take a fairly warm, soapy bath, twice a week, scrubbing the skin clean; dry thoroughly, and then liberally anoint the body with coco butter. Nine times out of ten you will control the itching; but if you do not, rub the coco butter on the body each day, or twice a day if necessary. If persisted in, this will usually afford relief.

Salves which contain carbolic acid will give quick relief from the itching, but they sometimes set up an irritation of the skin, so that in the end the remedy will prove to be worse than the disease. Folks who suffer from "winter itch" should avoid eating shellfish or oysters.

PNEUMONIA is very largely a winter disease, but not always. Proper exercise, good ventilation, control of the appetite, avoidance of chilling, exposure, crowds, alcohol, will contribute enormously to the prevention of pneumonia.

Neuralgia and neuritis, while they tend to appear and bother us more in winter, are really the result of focal infections. They are due to the action of pus-producing germs some place in the body.

It is interesting in this connection to note that some diseases, such as measles and scarlet fever, are almost always confined to the indoor season. When the fires are drawn and the windows are thrown open these diseases vanish, and then in the fall, when we lay our fires and shut up the house, back they come.

All of which leads me to repeat what I said at the beginning of this article—that man is an outdoor animal. However, since modern civilization and our climatic conditions necessitate our living indoors almost half of the year, it behooves us to do everything in our power to get ready for winter, and so to live during winter as to keep ourselves, as far as possible, above the disease line, particularly above the line of those so-called house diseases—colds, "flu," bronchitis, pneumonia, and tuberculosis.

War Drums

(*Continued from page 61*)

ne bench in a little recess in the shrubery, a book in her lap. She wore white ith a green shawl about her shoulders. achlan knew now what he had only aguely guessed at their first meeting in e dusk of evening—that her hair was of most wonderful red gold in which the ntangled sunlight worked miracles. He new now also that her eyes were not gray ut gray-green, with yellow-tawny lights nd very large, and that, in spite of those yes and that hair, she was not fair-skinned ut richly dark.

At that first meeting in the dusk he had een thrilled by her voice, by the grace of er slender form, by the poise of her head. But he had not really seen the brilliant eauty of her, beauty which could shine vith its full radiance only when there was ight to glorify her hair and reveal the parkling depths of her eyes.

It was not strange, perhaps, that he was naware of the signal that her eyes flashed o him—that he sat motionless, absorbed, ntil he was roused by a sudden imperious movement of her head which more plainly than words bade him descend.

He did so, with something less than his usual agility, since as he leaped downward a vine caught his foot and nearly threw him. He stumbled, then turned to find that she had risen and was moving toward him.

"I WILL read your thoughts, sir," she said in low, clear tones, full of a mock humility. "You are thinking what a monstrous unmaidenly thing it is that I have done in bringing you here to a meeting with me in this secret place."

Lachlan smiled.

"It happened," he replied, "that when the black boy plucked my sleeve, I had been searching my brain to find a way in which I might come to you, and I had already decided to try the garden wall. It had served me once and might serve again."

She flushed. It seemed to Lachlan that her tone was colder as she bade him take seat beside her.

"I brought you here," she said, "to offer my apologies, to make amends for my ungracious conduct on that occasion when you so gallantly came to my assistance, thinking me in distress. Believe me, sir, my scant courtesy then has troubled me ever since. I could not rest until I had spoken these words to you; and I knew no other way to accomplish it save this."

"It was nothing, Mam'selle," Lachlan said quickly. "I interfered in what did not concern me, and you sent me about my business. It is I that owe you thanks, since your intercession saved me, an unarmed man, from Captain Falcon's sword."

He hesitated, then continued, smiling:

"It may interest you to know that since then I have squared my account with that gentleman."

She caught her breath.

"You mean?" she asked.

"It is a long story," said Lachlan, "and there is something else that I would tell you first, something of much importance to you: Gilbert Barradell is alive, and

Just Wait— 'til He Learns to Play!

BEFORE New Year's he will have mastered the scale. In another week he'll be playing popular tunes. And by spring he'll be "the boy wonder" with his Buescher True Tone Saxophone.

At school he'll perk up and take the lead in his classes. He'll grow up with the right companions. He'll "make" the band. And the minister and the family doctor will regard him as a model boy.

Fun! Good friends! Health in mind and body! A pleasant, easy way to work his way through college! These are the gifts thrown in with Dad's Buescher True Tone Christmas.

Could your boy learn to play? Can he whistle a tune? Can he keep step with the band? Anyone who can do these things can quickly master any Buescher True Tone Instrument. It is not uncommon for beginners to learn scales in a day, play easy tunes first week. Your boy, or girl, or you, yourself, can learn to play a *Buescher.*

But only with the simplified keys and the perfect tune of the Buescher is rapid progress assured. You don't have to fuss and favor for certain notes. You just open or close the key and blow normally. It's almost as easy as playing "Home, Sweet Home" at the piano, with one finger. But oh! how beautiful.

Six days' trial in your own hands, at home, any instrument you choose, will prove to you how easy it is to learn to play a Buescher. Then, when you've tried, and you see how easily sweet music is produced, you may, if you choose, pay a little each month while learning. Easy to play. Easy to pay.

Let's flood our homes and our school rooms with the sunshine of harmony and foster a healthier, happier, holier generation. Our beautiful book, "The Story of the Saxophone," tells how, and it is mailed free to anyone interested in purchasing a Saxophone. No obligation. Trial and terms given if you decide to order. Send the "Happiness Coupon" now.

Buescher Trumpets, Trombones, and other band instruments are superior in easy playing, perfect tonal qualities, and are used by the leading artists throughout the world. Any instrument sent on six days' trial. Easy terms of payment. Mail the coupon for special catalog of your favorite instrument.

He stropped a new blade and it changed his whole idea about shaving

LIKE many men he had always said "Why should I bother to strop my blades when new blades are so cheap?"

To him a new blade meant a good shave. To be sure the second, third and fourth shaves were not so good, but he got by.

One day on a Pullman he got out a new blade, and was unwrapping it when his friend Putney showed him his Twinplex and offered to strop the new blade.

That first shave with a new blade, Twinplexed, was an eye opener to him. He admitted to Putney that never before had he had such a wonderful shave with a new blade.

Of course he bought a Twinplex when he got home, and now every shave is like that first one,—caressingly smooth.

To his surprise and delight he finds that a blade when stropped regularly on Twinplex holds its original keenness for weeks and weeks. He shaves in less time, has a cleaner shave and has more than saved the cost of his Twinplex.

You can now buy a Twinplex for as little as $2.50—less than a year's saving on blade purchases. Other models $3.50 and $5.00.

Stropped blade FREE

Name your razor and we'll send you, free, a new blade Twinplexed. We would like to show you what real shaving is.

within the week Almayne and I will go to him."

She rose with a stifled cry, her hand at her forehead, her bosom heaving. She opened her lips to speak, but no words came; and suddenly her eyes, wider than ever now and wildly staring, were full of terror.

Those eyes looked past Lachlan, and over his head where he sat on the bench, leaning forward a little, and looking eagerly up into her face. Suddenly his own eyes narrowed. Perhaps it was wholly the fear in her face that warned him; perhaps his keen ears had caught some slight sound behind him.

He gained his feet, but only for an instant. There was a crash, the world went black, he was falling, falling, falling an interminable distance.

LACHLAN McDONALD sat in Captain Lance Falcon's cabin on the brig "Good Fortune." Across the table sat Falcon, and between them stood the same silver wine pitcher which upon another occasion had served Lachlan as an effective weapon at close range. It was half full of red wine now; but Falcon, smiling grimly, picked it up and held it in his hand, testing its weight.

"Odds Fish!" he exclaimed. "The marvel is you did not kill me. 'Twas my hat saved my life. And your own head? How does it feel?"

"There was some pain; but it has passed. It must have been some hours ago that I was struck down."

Falcon poured wine for himself and pushed the pitcher toward Lachlan.

"It was on Sunday morning," he said, "and this is Monday forenoon. Meanwhile, you have enjoyed a long sleep here on my brig, and I rejoice to see that you have awakened refreshed and quite yourself again. When I bade my men bring you here to my cabin from your sleeping quarters in the hold, I did not know whether they would bring a live man or a dead one."

He sipped his wine; then, pushing back his chair, swung his booted legs up on the table. He was in high good humor.

"You must admit," he said pleasantly "that my little plan was skillfully conceived and that I worked fairly fast."

He paused as though expecting a reply, but Lachlan held his tongue. He knew now what he had already suspected—that he was a prisoner on Falcon's brig; and he knew that the man opposite him meant to kill him.

"It was a pretty plan," Falcon continued; "yet I owed something to luck. Perhaps you have not yet quite grasped all that has happened to you?"

He paused, his eyebrows lifted, and, at Lachlan's nod, proceeded briskly:

"Of course, it was necessary for me to lay hold of you at once. It was a clever game that you played as Don Ruy Ortiz, and you played it well; aye, and fought well, too, they tell me, after you had put me to sleep. In truth, it grieves me to interfere with the designs of so promising a young man. But you learned too much here in this cabin that night, and, although you could hardly prove your tale, I thought it best to get my hands on you before you could go to the governor with your story of Captain Lance Falcon as an agent of the Spaniards. In the nick of time, Mistress Jolie Stanwicke's black boy, who is in my pay, brought me word that at a certain hour you would be in the Stanwicke garden. This was a stroke of fortune. I regretted the necessity of rough work in the lady's presence, but that could not be helped."

He refilled his glass and drained it; then, noting that Lachlan's glass stood empty, he leaned forward and filled it also.

"Drink, sir," he exclaimed, with a gleam of strong white teeth under his thick, reddish-brown mustache. "Drink while you may! Since no travelers ever return from that mysterious country, we do not know whether or not they quaff wine there to the thrumming of the angels' harps."

He smiled more broadly. "Your pardon," he said, "for the intrusion of an unpleasant thought. To continue my explanation:

"I have in my crew three Indians of the Mohawk nation, who, long ago, while I lay in New York Harbor, forswore the forest for the sea, but who still retain their skill in woodcraft. They were the very men for my little enterprise, since, you will understand, I did not wish to appear in the affair myself, and I did not wish the lady to know that my men were concerned in it. She knows only that, while you sat talking with her in her garden, you were set upon by three Indians who leaped suddenly from the bushes. Being new to Charles Town, and thinking us even more barbarous than we really are, she has no difficulty in believing that your assailants were Indians of some tribe hostile to the Muskogee nation, of which I understand you are a chief."

Lachlan had followed the narrative with close attention. He frowned. The plan had been well made, indeed. Yet there were details as to which he felt a certain curiosity.

"I CONGRATULATE you, Captain Falcon," he said steadily, "upon your strategy. You have been frank in telling me how the trap was set and sprung. One thing more: After your Mohawks had knocked me down, what happened then?"

"The lady rushed into the house, crying for help," Falcon answered at once; "but when she returned, you and my fellows had vanished. I had, of course, foreseen the difficulty of getting you through the streets to the river front in full daylight. Townspeople who saw my Mohawks pass perceived that they were carrying on their shoulders a small boat's mast and sail. None knew that under the folds of the sail a handsome youth was lying unconscious!"

Lachlan nodded. The story was complete, and he detected no flaw in the execution of the plan. Almayne might suspect what had become of him, but Falcon had covered his tracks well.

Falcon, eying him keenly, seemed to read his thoughts.

"You perceive," he said gravely, "that the business of getting you away was managed exceedingly well. The rest is both simple and safe. If I now decide to let my men drop you into the ocean, I can do so without fear of embarrassment later."

Lachlan poured a glass of wine and swallowed it. His hand shook a little, sweat stood on his forehead. Falcon had lowered his legs from the table and sat upright, staring at him intently; and sud-

When the ball goes 'round the end for 40 yds.

"You're there with a Crosley!"

The Crosley Radio Corporation,
Can you explain "balancing," so folks can understand it? We technical people know that Hazeltine's neutrodyne principle is a wonderful thing. If you can make it understandable to laymen you're good.
Yours truly,
Giller Ward Hasner Hdwe. Co.,
St. Louis, Mo.

Nature always puts obstacles in our way. When men begin to study a new invention or discovery they find that there are many problems to solve before a successful device can be built. This was the case with the steam engine, the printing press, the automobile, the aeroplane, and every other major invention that you can think of.

The vacuum tube is, perhaps, one of the most remarkable inventions ever made. We found that we could use it to amplify the radio signals. But when we tried to tune these amplifiers, so that they would help us select the desired signal, we found that the vacuum had a tendency to misbehave.

SIGNAL VOLTAGES GOING INTO AMPLIFYING TUBE

When a tube is used to amplify, the output voltage is much stronger than the input voltage. This is the natural result of the amplification. But there is a path back through the tube through which some of the strong output voltage can get back to the input side of the tube. This voltage is then again amplified and again returns, getting stronger each time, the result being that the tube goes wild. It becomes a miniature broadcasting station on its own hook.

SIGNAL VOLTAGES LEAVING TUBE GREATLY AMPLIFIED BUT SOME RUN AROUND TO ENTRANCE AND CROWD IN WITH THE LITTLE INCOMING SIGNALS

AMPLIFIED SIGNALS RETURNING TO TUBE MIXING IT UP WITH INCOMING SIGNALS

If we can provide a second path from the output circuit to the input circuit, so arranged that the voltage which comes back through this second path is opposed to the voltage that comes back through the tube itself we can prevent the trouble. This is called "balancing" because the second path is adjusted so that it exactly balances the path through the tube.

HAZELTINE DIVIDES BOLSHEVIK VOLTAGES. BALANCING EACH OTHER BY OPPOSING EACH OTHER THEY CAUSE NO RUMPUS IN THE TUBE AND PROGRAM SIGNALS GO THRU AMPLIFIER WITHOUT INTERFERENCE

The Hazeltine method of balancing (or neutralizing) this path through the tube has several unique advantages over all the other methods that have been proposed. This is why Crosley radios use the Hazeltine "neutrodyne" method.

THIS new Crosley Bandbox

6 TUBE RECEIVER *de luxe*

is the national radio hit at $55.

The "All American" radio of 1928! With license to participate in the enormous radio resources of The Radio Corporation of America, The General Electric Co., The Westinghouse Co., The American Telephone and Telegraph Co., and The Hazeltine and The Latour Corporations, the Crosley Bandbox of 1928 is an "eleven" of super-efficient features and amazing co-ordinated performance. In it are incorporated:

1. **The best idea of balancing.**
2. **The best ideas of shielding.**
3. **The best ideas of sharp tuning.**
4. **The best idea of controlling volume.**
5. **The best idea of station selection.**
6. **The best idea of finish and color.**
7. **The best idea of power tube use.**
8. **The best idea of console installation.**
9. **The best idea of power supply connections by enclosing all leads in a cable.**
10. **The best idea of AC tube operation.**
11. **The best idea of converting AC current to necessary radio DC.**

Operation of the Bandbox receiver from house current is possible with the AC model at $65, which uses the new amazing R. C. A. AC tubes. Power converter costs $60 more.

These new Bandbox receivers are now on display at over 16,000 Authorized Crosley dealers. Their faultless reception of the many wonderful events constantly on the air is proving such a startling demonstration that a national enthusiasm sweeps the country in the natural exclamation—"You're there with a Crosley!" If you cannot locate your nearest dealer write Dept. 2 for his name and literature.

Approved Consoles

Selected by Powel Crosley, Jr., as ideal, acoustically and mechanically for the installation of the Crosley "Bandbox." Genuine Musicone built in. Crosley dealers secure them from their jobbers through

Zenith was first

at the Arctic

to build DeLuxe Radio

holder of world's long distance record

Zenith *is* first

The Zenith De Luxe ten-tube Electric was the first receiver of this type to be produced on a commercial scale. Now it is the first ten-tube set to be equipped with a power speaker, ready for operation from any light circuit. The Zenith De Luxe Model brings remarkable tone quality, range and selectivity. It reproduces all voices and instruments with fine delicacy and faithfulness. It tunes out the most powerful broadcast and selects the wanted station without interference. Hear this great musical instrument! Your delight in Zenith will not lessen—*in years.*

English Electric De Luxe Model

The ten-tube Electric Chassis in this beautiful example of period furniture. Entirely electric, with power speaker—no batteries, loops or antenna. The doors in this model are shown moved back into the recesses—another exclusive Zenith feature.

Price $800.

denly something in the man's eyes, some expression of hateful, triumphant expectation, stabbed Lachlan like a sword.

He had held himself in check until now; but now at last his tautened nerves threatened to give way. Falcon was waiting and watching for this, was expecting it.

A sudden hot anger blazed in Lachlan because this man had expected him to falter, anger which was all the hotter because he knew that for an instant he *had* faltered. He leaned across the table, and struck Falcon across the mouth with the back of his hand.

"You call yourself a soldier," he said hoarsely. "If you have a soldier's pride, you will wipe out that stain before your seamen throw me to the sharks!"

Falcon did not move. There was a fleck of blood upon his mouth, but the lips were smiling. At last he brought his open hand down upon the table with a crash.

"WELL done, Lachlan McDonald!" he cried. "Well done, and well spoken, and a happy, happy thought—a flash of inspiration, no less! A thrust through the heart or lungs in fair fight is not murder, and it is a more gentlemanly way of killing a man than dropping him overboard."

He rose, and, suddenly extending his long arm across the table, tapped Lachlan's chest with his forefinger.

"An hour from now, sir," he said, "I shall take great pleasure in placing my sword point there!"

Again his forefinger tapped Lachlan's chest above the heart.

A space had been cleared on the brig's deck between the masts. Around it in a circle were gathered the vessel's crew—some fifty seamen, English for the most part, but many of them sunburned as dark as Spaniards. In the center Captain Lance Falcon stood, his hand upon the hilt of his rapier, the point of which rested upon the deck in front of him. A little behind him stood Lachlan McDonald, pale, but level-eyed and cool, in his right hand a rapier somewhat more slender than Lance Falcon's.

There was a silence broken only by the swish of the water, the creaking of rigging, the harsh cries of a few circling gulls. On every sun-tanned face in that crowding, eager circle was written a savage, joyous expectancy. Some were bareheaded, some wore scarves of red or blue or yellow upon their heads, all were bare-armed and bare-chested, many had hoops of gold in their ears.

Lachlan's black eyes swept round the circle of faces. He saw there what he might have seen in the faces of men gathered around a cockpit: no hint of mercy or compassion; only blood lust flaming in hard, relentless eyes; the seething, passionate excitement of savage men about to witness that which their stern souls loved most to see.

Falcon raised his hand, although there was no need to command silence. He stood bareheaded and coatless, his arms bare to the elbows, his white shirt open at the throat; a tall, broad-shouldered, immensely powerful man, yet so perfectly proportioned that, for all its weight and bulk, his body had something of a tiger's grace.

Lachlan's lips tightened. Knowing his own powers, he was nevertheless aware that he faced an antagonist whose experience was far greater than his. Yet his hand was steady as he placed himself on guard. Now, as always, the feel of the sword gave him courage.

Falcon had turned and was facing him, his weapon raised in salute. Lachlan, on guard, watched him closely—watched, waited, was struck with sudden wonder. Gradually, yet swiftly, Falcon's countenance was undergoing an astonishing metamorphosis. The sneer was fading from his lips; the tan of his cheeks was deepening to a purplish-red; on his forehead the veins were swelling; into his eyes had crept a look of rapt, incredulous amazement.

He stood as though paralyzed, mouth open, eyes glaring; and those eyes looked past Lachlan, stared wildly, fixedly, as though they saw a ghost. Then from some seaman in that part of the circle behind Falcon burst a hoarse cry:

"The 'Merry Amy'! Black Lowther's ship!"

The spell was shattered. The circle of fierce faces was now a milling mass of men who surged this way and that, cursing, shouting, craning their necks, staring toward the east. Another moment, and the circle broke as most of the seamen rushed to the rail.

Out from the heavy fog bank ahead and to the eastward had burst a great ship, a ship of towering masts and tapering spars, high-sided, her black hull pierced with gunports like a frigate. She flew no flag. Her wet, bellying sails shone like silver in the sun; her white decks were dotted with men running to and fro. She was sailing on a course which would bring her presently across the brig's bows; and even as Lachlan watched her, there came a puff of smoke from her forward deck, and a ball struck the sea ahead of the "Good Fortune."

Close behind Lachlan a thunderous voice bellowed a command. Falcon stood there, his face aflame with excitement, his eyes blazing. Still grasping his sword, he shouted orders with his bull's voice, turning now forward and now aft. Lachlan saw chaos magically transformed.

Hubbub ceased, confusion vanished. Men ran to the ropes; suddenly, with a mighty flapping of canvas, the brig swung 'round into the wind, careening so sharply that for a minute Lachlan, struggling to keep his footing, thought that she must capsize.

SHE righted herself, her sails filled, slowly she gathered headway, her stern now turned to the great ship which had come out of the fog. Lachlan, gazing aft, saw that the ship also was turning in a maneuver as swift and daring as that in which Falcon had turned his brig. Beside him a harsh voice croaked an oath—a one-eyed, ear-ringed seaman, teeth bared in a snarling grin.

"By the Pit!" the man growled, "Black Lowther knows his business too!"

A hand fell on the seaman's shoulder and sent him spinning. It was Falcon. "Come aft, sir!" he snapped at Lachlan, and strode toward the stern, shouting orders as he went. Lachlan followed, saw Falcon snatch the wheel from the helmsman, stood by with thumping heart and parted lips, as the man before him, oblivious of his presence, dealt with the peril that had burst upon him out of the fog.

... Modern

Here is the Eveready Layerbilt "B" Battery No. 486, Eveready's longest-lasting provider of Battery Power.

Radio is better with *Battery* Power

NOT because they are new in themselves, but because they make possible modern perfection of radio reception, batteries are the modern source of radio power.

Today's radio sets were produced not merely to make something new, but to give you new enjoyment. That they will do. New pleasures await you; more especially if you use Battery Power. Never were receivers so sensitive, loud-speakers so faithful; never has the need been so imperative for pure DC, Direct Current, that batteries provide. You must operate your set with current that is smooth, uniform, steady. Only such current is noiseless, free from disturbing sounds and false tonal effects. And only from batteries can such current be had.

So batteries are needful if you would bring to your home the best that radio has to offer. Choose the Eveready Layerbilt "B" Battery No. 486, modern in construction, developed exclusively by Eveready to bring new life and vigor to an old principle—actually the best and longest-lasting Eveready Battery ever built. It gives you Battery Power for such a long time that you will find the cost and effort of infrequent replacement small indeed beside the modern perfection of reception that Battery Power makes possible.

Luxury and service in AMITY GIFTS fashioned of fine leather

CHOOSE your gifts from the Amity line of distinguished and serviceable leather articles—wallets, billfolds, ladies' de luxe hand-bags, cigarette cases, Key Kaddies.

Expert craftsmen fashion these articles from the finest of selected leathers—imported steerhide, pigskin, calf, morocco, ostrich, soft European goatskin, cowhide, pin seal.

Many Amity articles are richly tooled, hand-colored and hand-laced—at once the most artistic and most practical things of their kind. Always look for the name Amity. It is your guarantee of real leather, of long wear, of skilled craftsmanship.

The prices, for such magnificently worked leather, are decidedly moderate. You will be particularly interested in Amity sets packed in handsome silk-lined gift boxes.

Inspect the Amity line at your dealer's. Write us for free illustrated booklet No. 11. Amity Leather Products Company, West Bend, Wisconsin.

AMITY
it's leather

He crowded sail on the brig until she was carrying every inch of canvas. He sent men aloft with buckets to wet the sails so that they would hold the wind. From a long gun on the after-deck he answered the cannonade which the pursuing ship maintained, until both sides desisted, seeing that the shots fell short. Meanwhile, he prepared for battle. Lachlan saw that men were busy at the broadside guns, that ammunition was being brought from the magazine, that cutlasses, hangers, and pikes were stacked upon the deck.

Then, after half an hour of feverish activity, of ceaseless bellowing of orders, a strange stillness and silence fell. Lachlan knew that for the present all that could be done had been done, that the issue rested with fate.

Falcon turned to him then.

"You have good luck, Mr. McDonald. D'ye know our friends yonder?"

Lachlan shook his head.

"That ship," Falcon continued, "is named the 'Merry Amy,' and she is commanded by a gentleman of some fame upon the seas. From his amiable disposition, he is known as Black Lowther, and, like myself, he is a privateer of somewhat easy conscience, who does not quite understand where privateering ends and piracy begins. Once in the Gulf of Florida I stole from him a prize which he had taken, and he swore by his favorite saint that he would cut off my ears and feed my heart to his pet dog. His ship, being twice as large as the 'Good Fortune,' and carrying eighteen guns to our eight, he conceives that he has his opportunity now." He glanced aloft, shouted an order, then turned again to Lachlan.

"It may happen after all, sir," he said calmly, "that I shall have to drown you like a rat instead of killing you like a gentleman. If I am forced to that necessity presently, you will please blame this inconvenient fellow, Lowther, who has interrupted our little affair!"

IT WAS an hour after noon when the "Merry Amy" burst like a phantom ship out of the fog and the chase of the "Good Fortune" began. Two hours later it was plain that the chase could have but one ending: Black Lowther's ship was gaining. At first, while the breeze held light, she had dropped a little behind; but the "Good Fortune" belied her name; luck, or fate, turned persistently against her. The fog bank to the eastward, in which Falcon had hoped to lose his pursuer, lifted and disappeared, and simultaneously the breeze freshened.

The "Good Fortune" sailed well in any wind. She gathered speed as the breeze increased, and Lachlan, standing beside Falcon at the wheel, marveled at her swiftness as she leaped quivering through the seas.

"I think we shall win, Captain Falcon," he said presently.

The tall man smiled sourly. "A landsman's opinion," he replied. "In light airs we could outpace her. In a stiff wind the 'Merry Amy' is the fastest vessel on the Western Ocean."

For a while he said no more, and Lachlan, watching the ship behind, soon saw that he spoke truth. Little by little the "Merry Amy" was creeping up. Black Lowther, too, had crowded on all sail; from truck to rail his ship was a towering mass of canvas. Beside Falcon, who still handled the wheel, now stood Diccon Drews, his second in command, a short, broad, hairy, tattooed ruffian, stripped to the waist, his sash bristling with pistols.

Lowther's tremendous press of canvas was straining his tall masts and tapering spars. Again and again, Diccon Drews, a long glass pressed to his glowering eye, studied the "Merry Amy's" bellying sails, and any moment he hoped to see a topmast snap. Falcon, knowing Black Lowther's seamanship, dismissed this possibility, but turned his head at intervals to gauge the lessening distance between the two vessels.

Good shooting was impossible in such a sea; but a little later, when the range would be shorter, a lucky shot from the long gun at the "Good Fortune's" stern might give that slim foretopmast a fatal wound. It was one chance in a hundred; and, even then, with half a gale blowing, the ship would outsail the brig. But the chase would last longer and there might be time to play the last card.

With a quickening pulse, Lachlan learned what that last card would be. If they were not overhauled meantime, Falcon would head in for the coast opposite Edisto Inlet, and either wreck his brig on the treacherous shoals at the inlet mouth, or, by some miracle of luck and seamanship, drop anchor safe in Edisto River, where his pursuer could not come.

AN HOUR passed, and always the wind rose higher and the waves grew mightier, so that the "Good Fortune" plunged and leaped from wave to wave, burying her prow deep in the crested combers, her decks awash with brine and foam. She still carried all her canvas, but Lowther had shortened sail. Yet the "Merry Amy" still gained, was now within easy gunshot.

For half an hour the long gun in the brig's stern had been sniping at the pursuer's spars. Shooting from that plunging deck was like shooting in the dark. Every shot had gone wild. Nevertheless, Falcon held his gunners to their task, laughing, cursing, swearing that the next shot would do the work.

Above the roar of the wind, Lachlan heard a hollow booming sound which seemed miles away. Lowther had opened fire with his bow chaser. At the same moment there ran up to the tip of the "Merry Amy's" mainmast a small black square of bunting.

At the sight a deep-throated shout burst from the "Good Fortune's" crew, and Falcon laughed grimly and bellowed an order forward. Three minutes later, a black flag blazoned with white crossbones and skull climbed to the "Good Fortune's" main peak.

Falcon spoke over his shoulder to Lachlan, standing just behind him.

"He is a brutish clodpole, this Black Lowther," he said, "but he has a certain wit. In these tame times the Jolly Roger is seldom flown, because most rovers have grown too discreet to proclaim their profession. But when two gentlemen of that profession meet to settle a quarrel, it is fitting that they should meet under the good old flag!"

He had scarcely finished when the gun at the brig's stern roared again. Suddenly Diccon Drews, who had been gazing at the "Merry Amy" through his glass,

15 jewel; radium dial $28.50

This Assurance is Priceless

Of course it is important to remember, in buying a watch, that it must be a perfect timepiece. It must know no excuse for inaccuracy. Such a timepiece is Bulova.

But to the most perfect timepieces mishaps will occur. You may drop your watch, breaking a minute part in the movement. It is, therefore, equally important in selecting a watch, to be sure that your jeweler can replace the broken part accurately, so that the watch will be as perfect, as trustworthy, as it was before the mishap.

This priceless assurance is yours with a Bulova Watch. For every Bulova jeweler has on hand always a supply of each tiny part that makes the Bulova standardized movement. Without loss of time, he will return your watch to you *as dependable as the day you bought it.*

Bulova Watches vary in cost only as they vary in design. They are alike in dependability.

The BONDSTREET . . . a *new idea* in masculine jewelry

USUALLY, a man chooses his clothes (and his jewelry) far more conservatively than a woman. Most men are suspicious of new fashions. . . . Yet the Bondstreet has set an authentic style trend in men's watch chains.

No other chain is like it. Its heavy, rugged links are twice as large as the usual ones. But they give no hint of clumsiness. The Bondstreet reflects the best traditions of masculine taste. . . . Bond Street in London, where the styles of the world are originated for men, gave its name to it. Appropriately so. For the most carefully dressed men of all ages—from Wall Street bankers to Hollywood movie stars—are wearing this beautiful Simmons design.

Your jeweler will show you a wide selection of Bondstreets and other Simmons Waldemar, Dickens, Vest and Belt Chains. Priced from $4 to $15. Shown here is chain No. 28,993. Price $10.50. R. F. Simmons Co., Attleboro, Mass.

SIMMONS

CHAINS

The swivel says it's a Simmons

leaped into the air, clutching wildly at one of the pistols in his sash. He jerked it out and fired it above his head.

"A hit, by Judas! A hit!" he shouted. "Square in the foretopmast!"

A great shout, exultant yet half incredulous, rose from the brig. To the unaided eye there was nothing to show that the man spoke truth, but almost instantly came the proof. On the deck of the "Merry Amy" there was a sudden activity. Yet, swift as Lowther was to act, he was too late. Before he could shorten sail to relieve the strain, the wounded spar snapped with a report louder than the "Merry Amy's" cannon, swayed drunkenly and toppled to leeward, its ripped canvas fluttering and streaming in the wind.

Falcon's great voice boomed out above the gale and the yells of his men—

"Lance Falcon's luck, my bullies! It's never failed us yet!"

Then suddenly the easy nonchalance which had sat so well upon him vanished. With the frenzy of a madman he threw himself into his work, straining at the wheel, cursing with fearful blasphemies the gunners, who still plied the stern gun as fast as they could ram each charge home, bellowing hoarse orders to the seamen forward and in the vessel's waist.

"He knows there's a chance now," Drews growled in Lachlan's ear, "an' he's begun to fight."

But the chance was slender. To Lachlan there came within the next half-hour conviction that the race was lost.

THE "Merry Amy" still gained—less rapidly than before, but steadily, surely. It was not only a race now but a battle, for Black Lowther was firing from his bow chaser and from two of his forward ports; three guns against one, since only the long gun on the "Good Fortune's" after deck could be brought to bear. Already there were three great holes in the "Good Fortune's" sails. The "Merry Amy's" fire was more accurate than the brig's; being much larger, she was a steadier gun platform. She outpointed the brig too, and while she gained, she crept slowly to windward. A little while more, and Lowther would be able to train his port broadside on his adversary.

All on board the "Good Fortune" knew what that would mean. The brig would be hammered to pieces, smashed little by little into kindling wood by an overwhelming rain of iron.

A round shot struck the water just behind the "Good Fortune," so close to her that Lachlan felt the spray on his cheek. Next moment, with a whining, humming hiss, a ball passed not six feet from Falcon where he stood at the wheel and, ranging diagonally forward across the deck, nicked a great chunk out of the port bulwark. Lowther had changed his tactics. Hitherto he had been shooting at the "Good Fortune's" spars. Now, with the race as good as won, his target was the brig's deck.

For a while, though both vessels fired steadily, there were no more hits. Then a cheer arose from the "Good Fortune." One of her shots had gone home.

It had struck the "Merry Amy's" deck squarely, just as the ship plunged into a hollow between two waves, and it had worked havoc. Lachlan saw men running to and fro on the ship's forward deck, and Diccon Drews, peering through the glass

Ingersoll

RADIOLITES
Tell Time in the Dark

Under Your Pillow at Night

When you wake up early these dark winter mornings, sleepily wondering what time it is, just pluck your Ingersoll Radiolite from underneath the pillow and you'll *know.*

When you go home late at night, and street lamps are few and far between, your Ingersoll Radiolite will tell you the time truthfully *without* making you peer or strain your eyes.

Its luminous hands and figures, glowing brightly in the dark, show the *right* time in any light.

For use

—in the nursery, sick room or the photographer's dark room; when night driving in your car; at the movie theatre; by nursing mothers, nurses, soldiers, night watchmen, policemen, and farmers at their chores.

INGERSOLL WATCH CO., Inc.
New York · Chicago · San Francisco
Service Department: Waterbury, Conn.

The Ingersolls illustrated below are: Yankee Radiolite, $2.25; Midget Radiolite, $3.75; Wrist Radiolite, $4.00; Eclipse Radiolite, $3.25; Junior Radiolite, $4.

just as the shot struck, swore savagely that the crew of the "Merry Amy's" forward gun had been wiped out.

"First blood!" roared Falcon. "By—"

A rending crash drowned the oath. Behind and to the right of Lachlan the brig's bulwark had been ripped asunder. A splinter struck him between the shoulder blades, though without inflicting a wound, and he staggered and almost fell. Recovering himself, he sickened at what he saw. Forward, in the waist of the ship, where the ball had ranged, five men were down.

ABOVE the yells and groans of the wounded, Lachlan heard a whining, a humming. It was so loud, so near, that this time he was sure his end had come; but the ball passed him, passed Drews and Falcon and the men of the after gun, and smashed into the "Good Fortune's" waist near the port rail as she rose on a billowing wave. Thence it ranged forward along the deck, its force almost spent, and Lachlan saw it, and saw the devastation which it wrought.

Men went down before it like ninepins in some bowling game of the giants—man after man in swift succession, until six men had fallen.

Falcon gripped Diccon Drews's arm, bade him take the wheel, then strode forward along the heaving deck. Lachlan followed, not knowing why. Close to the mainmast, Falcon halted.

"Men," he roared, "a half-hour more and we can run for Edisto Inlet. Will you stand the gaff till then, or will you hoist the white flag?"

He quelled with his raised hand the shout that arose.

"Surrender'll mean life to most of you. Black Lowther wants me and Diccon Drews and half a dozen others; but he'll let the rest of you go. We'll die; but most of you'll live. Which shall it be? The white flag or fight?"

From far forward a deep voice made reply. "To hell with Black Lowther!" boomed the words above the din of the gale, and the cheer that greeted them was half a cheer and half an unearthly laugh.

Falcon whirled and strode aft again, his eyes ablaze. In Lachlan's eyes, too, as he followed, a strange light flamed.

The half-hour had nearly passed. The "Good Fortune" was a ship of blood, a habitation of death. Sailing almost abreast of her and scarcely more than a pistol-shot away, the "Merry Amy" had poured broadside after broadside into her. But for the heavy seas, in which marksmanship even at close range was difficult, the "Good Fortune" could not have lived so long.

But she did live, and her masts still stood, and Falcon still held the wheel, though Diccon Drews was dead. Lachlan McDonald had taken his place. In his bull's voice Falcon still shouted his orders forward; but to Lachlan he gave his instructions for the powder-blackened men who worked the after gun. Once, when the "Good Fortune" still reeled under the shock of another broadside, he slapped Lachlan's back and congratulated him on becoming first mate of a pirate brig.

To Lachlan the thing seemed somehow not unduly strange—he was one with this crew of cut-throats, this crew of heroes. He was Lance Falcon's man. He had been Falcon's man since the moment when Falcon had made that speech beside the mainmast.

He had been afraid, weak with fear, sick with the sight of blood, bewildered by the incredible, infernal din of the fight—the thunder of the guns, the crashing of rent timbers, the cries of wounded men. But all this had passed; he was as cool now as Falcon himself. The battle was in his veins. He was drunk with the stark, incalculable courage of these men who fought and cursed and died and still yelled above the tumult, "To hell with Black Lowther!"

From the "Merry Amy" another broadside roared, and this time, whether by design or accident, the shot went high. From aloft came a loud crack, and a great spar hung dangling, the sail which it had supported flapping loosely. Falcon bellowed an order. To Lachlan it meant little; but he saw that men left the guns and leaped to the ropes.

Suddenly Falcon threw his weight on the wheel and the brig swung to port, turning directly away from the "Merry Amy," racing, with the wind behind her, straight for a narrow gap in the distant line of trees which marked the coast.

There was still spirit enough in what was left of that battered crew for another cheer, and they cheered, and Lachlan cheered with them. Yet he at least knew—for Falcon had told him—that in attempting to enter the inlet, they were going to destruction almost as certain as that which in another half-hour Lowther's guns would have dealt.

Lachlan looked astern. The "Merry Amy" had come about and lay broadside on. Then slowly her bow swung landward, her yards were squared, and the chase was on once more.

"He'll follow us in till the water shoals," growled Falcon. "Then he'll tack and watch us drown."

THE minutes passed. Lachlan heard the hiss of the waves, the whine of the wind, the wailing of a wounded man somewhere forward, the groaning and creaking of the brig's straining spars. Yet, now that the guns were still and there came no more the crash of timbers disintegrating under a hail of iron, it seemed to him that they moved through a silence, grim, unnatural, unbearable.

It was more terrible than the tumult of the fight, this silence. It was portentous, black with menace; somehow, he knew that it could not last, and that after it would come the end.

A loud crack, followed by others in quick succession, shattered it. A rending, rushing sound filled the air. Its shrouds and backstays long since shot away, the mainmast had broken fifteen feet above the deck, snapped by the prodigious pitching of the brig as she plunged head on into the rollers. It fell forward, fouling the foreyards; and in that moment the "Good Fortune," already a wreck below from Lowther's guns, became a wreck above, also, a helpless plaything of the waves.

A cry rose from her deck, a cry which was not a cheer, a hoarse, long-drawn moan of dismay. Slowly she fell off until she lay in the trough of the seas, wallowing heavily, rolling her ripped and shattered bulwarks under. No spar ever fashioned could stand such a strain. Within three

Get a new hat with what it saves you

Using Listerine Tooth Paste instead of costlier ones, the average saving is $3 per year per person. With this a man may buy a hat, a necktie or two, hosiery and shirts; a woman may purchase stockings, handkerchiefs, cold cream, etc.

Thousands have switched to this new tooth paste - *because 25¢ the large tube*

You see it all around you—the effect of efficiency and mass production . . . wonderful motor cars at surprisingly low prices . . . household appliances now costing half what they used to.

Such a tendency was bound to extend to the tooth paste field.

That is why, today, we can offer you a first class dentifrice—at *25c for a large tube.* It is called Listerine Tooth Paste.

In our opinion, after fifty years of study of tooth and mouth troubles, it is the ideal tooth paste for all types of teeth.

In addition to certain ingredients for the proper care of teeth, mouth and gums, it contains a marvelous new polishing agent, which reduces brushing to a minimum . . . the speediest dentifrice known.

In the last six months, thousands have switched to Listerine Tooth Paste. Having proved that it cleans teeth whiter and in quicker time, they have discarded older dentifrices costing sometimes twice as much. They apply the saving to buying things they want.

We urge you to try this new dentifrice obtainable from any druggist. If you are not delighted with its results and its economy you will be the exception. Lambert Pharmacal Company, St. Louis, Mo., U. S. A.

Sturdy cowhide—strong one-piece hooks. Price $1.00

Your keys can't tangle

UNTIL you get a Buxton you can't know how easy it is to care for keys.

Buxton Key-Tainers have brought to millions a new sense of security and convenience. Every key always in place—compact, accessible, safe. And the Buxton Key Return Service on guard to bring them back if lost.

Buxtons are built for long wear. The leather reinforced pocket flap keeps the Key-Tainer always in shape. The tempered steel hooks won't break or bend.

You can get Buxtons in all popular leathers—exquisitely hand-wrought throughout. Priced from 50 cents up. A wide assortment around one dollar. Sizes to accommodate from 4 to 16 keys.

Leading jewelers, department, leather goods and stationery stores carry Buxton Key-Tainers. If you don't find what you want write us for booklet. Address Buxton, Inc., 201 Main Street, Springfield, Mass., *or if in Canada, The Julian Sale Leather Goods Co., Ltd., Toronto, Ont.*

Special features found only in a Buxton

BUXTON
Key-Tainer

minutes her dreadful wallowing fairly jerked the foremast out of her.

She lived a half-hour longer. Wind and tide and onrushing combers drove her drunkenly toward the coast. When she perished, she perished utterly. The sea raised her high and flung her down upon an invisible reef, raised her once more, and a second time flung her down. To Lachlan it seemed that she went to pieces as suddenly as though some monstrous cannon in her vitals had exploded and blown her into atoms.

LACHLAN lay on his back in a shallow hollow amid low sand hills. He raised his head slowly and looked about him. Four other men, naked or half naked, sprawled near him, breathing heavily. In the east the sun stood an hour high. The air was very still.

Against the blue sky a white-headed eagle circled on motionless wings. In a small gray-green bush across the hollow a wren sang merrily. Above a ridge of sand thirty feet away, Lachlan saw the head of a whitetail buck appear, heard the buck's snort of astonishment as he wheeled and vanished. From beyond the dunes came the continuous moan of the surf. Suddenly, Lachlan remembered.

It came crowding back into his mind—a torrent of memories, confused yet vivid. Most vivid of all was one!

He was in the water fighting his way toward a great floating timber, a fragment of the "Good Fortune," to which several men were clinging. He knew that he could not reach it, but he fought on.

At last he clutched for it, missed, and knew that he was done. But a hand reached out, grasped him, drew him up on the timber. Later he realized that the man next to him, the man who had saved him, was Lance Falcon.

All this seemed vastly remote, as though it had happened months ago. He remembered vaguely that, after an eternity, the sea had cast them ashore in the dusk, that they had staggered across the narrow beach to the sandhills beyond, and had flung themselves down on the soft sand.

Lachlan got slowly to his feet. He felt somewhat light-headed; his limbs were stiff and sore; he was cold. He swung his bare arms—his only garment was his trousers—to warm himself, and realized suddenly that he was weak and very tired. Without a glance at the four sleeping men, he walked to the top of the sand ridge in order to get a view of his surroundings.

Fifty yards away on the beach he saw Falcon, coatless and hatless, his white shirt hanging in ribbons, gazing out over the ocean.

Lachlan stood for some moments watching him. Presently Falcon turned, saw Lachlan standing on the dune, and beckoned him; and Lachlan walked slowly down the slope of the dune and across the beach. As he approached, he saw that Falcon was smiling; and this smile filled him with a dull surprise, a vague, undefined horror.

"Give you good morning, Mr. McDonald," Falcon said briskly as Lachlan drew near. "I have been mourning at the grave of the 'Good Fortune,' and now my faithful first mate has come to shed a few tears on her watery bier."

It was the tone, the sneer on his lips which made a hard, loathsome jest of the words. Lachlan stepped back a pace, his face suddenly white; but Falcon continued calmly:

"She was a stanch brig, but too small and not fast enough. As for my crew, they knew too much about me, and it was time I was rid of them. It may be that Providence, acting through Black Lowther, has done me a good turn."

The thought seemed to amuse him. He smiled more broadly, then added:

"It happens that the four who are saved are very faithful dogs whom I can trust and use. Else it might be well to finish what Lowther and the ocean between them could not quite accomplish."

He paced to and fro on the beach, while Lachlan watched him. Presently he halted and stood facing the younger man.

"I have a bargain to propose to you, Mr. McDonald," he said, "though why I bargain with you I hardly know. You are alone with me on a lonely shore. Man to man, you are not my match. I am heavier and stronger. You are weak from last night's ordeal. You are not fit either to fight or to run. I have no weapon, but I can easily kill you with my hands or with that piece of driftwood yonder. I may add that out there I saved your life last evening when I could have let you drown.

"My proposal is this: You will forget what you learned in my cabin about my dealing with the Spaniards. You will forget, too, that you saw the black flag flying at my peak or that I am aught else than an honest privateersman. You will give me your word of honor that you will not use these things against me in any way. You will not deny the story I shall tell in Charles Town about the loss of the 'Good Fortune.' As for the lady in whom it appears you are interested, with your friend Almayne, I place no restriction upon you. I shall take care of myself there."

HE CEASED, and stood searching Lachlan's face.

"Your answer, sir," he said brusquely. "Time presses."

Lachlan looked past Falcon over the leagues of ocean. Again there came crowding into his mind a host of memories; the din of the sea fight, the roar of the guns, the crash of shattering timbers, a great voice booming above the gale. He lifted his eyes and met Falcon's gaze.

"I agree," he said in a low, lifeless tone.

Then he turned his back on Falcon, walked to the ridge above the beach, and sat down on the sand.

(*To be continued*)

NEXT month, in "Dick Byrd—Gentleman," you will meet Commander Richard Evelyn Byrd, probably the most active officer on the United States Navy's retired list. Cited for heroism or extraordinary valor twenty-one times, Commander Byrd's achievement of flying over the North Pole made his name famous throughout the world. He crowned that fame when the plane "America," after one terrible night in July, landed on the coast of northern France. This intimate personal sketch, written by his friend Commander Fitzhugh Green, reveals one of the finest sportsmen that this country has ever known.

Men Who Set the Style

Their names are a part of America's social fabric. They move in the higher, select circles. With them, evening clothes is a habit. If they show such marked preference for Krementz Evening Jewelry the reason is not hard to find. Above all, it is correct! And so easy to use! The bodkin-clutch back on the studs and waistcoat buttons is easily inserted, holds securely; no trouble at all. Also, Krementz Sets are complete, with waistcoat buttons matching studs and links—the correct form! In rich, distinctive cases, these sets are largely used for gifts. Priced up to $50. Name of dealer near you, illustrations of designs upon request.

KREMENTZ & CO., NEWARK, N. J.

Set No. 2082—Full dress set, white mother-of-pearl centers; Krementz Quality White Metal rims; complete $8.00

Krementz Gift JEWELRY FOR MEN

"Folks Mostly Acts Like Human Beings"

(*Continued from page 55*)

Sheriff, I hain't sure but I'd kind of pamper public opinion some. 'Tain't allus wise to be drastic. That's one of the things I've learnt, muddlin' around the world. No, sir; if I was you I'd kind of keep an eye ahead agin criticism come next election."

"As how?"

"W-al, I'd show the folks I had jedgment. Instid of shuttin' her under the pust office, I'd arrange things to confine her right into this here house."

"Dunno but what that's common sense, Scattergood."

So it was done. Gertie was placed under formal arrest, charged with the murder of her foster father, and Scattergood, perceiving nothing more to be done in that place, drew Milt Green away. Gertie seemed not to be affected by their going. Apathy sat upon her—apathy and grim despair. They left her sitting in her chair, head bent, hands folded in her lap. Milt alone was wet of eye.

"Mr. Baines, she never said she didn't do it," said the boy.

"Neither'd I say I didn't," said Scattergood. "Now, young feller, you go off some'eres and set, and shet up. I got to think a mite. I got to think out which of a number of things could 'a' happened. Fust, if Gertie could 'a' done it. Second, if somebody else done it a-purpose and with malice. Third, if it was done by mistake—takin' the squire for somebody else. And last, if he done it himself. G'-by, Milt."

Thus abruptly, according to his custom, he dismissed the boy and returned to the piazza of his hardware store, where presently he might have been seen with shoes removed, toes wriggling freely and chin buried on his ample chest.

HE ELIMINATED: The finding of the rifle eliminated a section of the puzzle There remained to consider if the squire had taken the rifle himself and had committed suicide; if Gertie had lain in wait for the old man's return; or if some third person unknown had abstracted the weapon from the house with the thought to throw suspicion from himself and onto the girl.

The known facts threw out the supposition of suicide. The squire had been killed by a shot from a distance. Then was it Gertie or some person unknown? And who, besides Gertie, owned any motive for such a deed.

Scattergood pretended to throw Gertie out of the consideration. The guilt might be hers, but he did not wish it to be hers. So his effort was to hit upon someone who could profit by the old man's death. He considered the motives which might prompt a murderer. There was jealousy. The squire was too old to inspire that emotion. There was revenge. That matter Scattergood left for investigation. There was cupidity—and to that he gave scant attention, for the squire carried little money upon his person and his death

Sunshine all the way *to* California *via the* Sunset Route

TAKE the world-famed Sunset Limited or the Argonaut—one of these two fine trains will speed your journey through the balmy air and superb climate of the Golden Southwest. Daily from New Orleans to Los Angeles, San Diego and San Francisco, with the Apache Trail as an enchanting motor link along the way.

For the homeward trip have a Southern Pacific representative arrange your return over the

Golden State Route; through El Paso, portal to Old Mexico; via Apache Land, Kansas City, Chicago.

Overland Route; along the American River Canyon, via lovely Lake Tahoe, and across Great Salt Lake to Chicago.

Shasta Route; North via Klamath over new Cascade Line—Mt. Shasta, Crater Lake, Portland and the Pacific Northwest.

See the whole Pacific Coast

From Mexico to Canada—Metropolitan Cities—Movieland—Chinatown—quaint Spanish Missions, smiling valleys.

For information and literature write, phone or call your nearest Southern Pacific representative.

New York: 165 Broadway and 531 Fifth Ave. at 44th St. **Chicago:** 33 West Jackson Blvd. **New Orleans:** Pan. Am. Bank Bldg. **Houston:** So. Pacific Bldg. **Los Angeles:** Pacific Electric Bldg. **San Francisco:** Southern Pacific Building.

Southern Pacific

could benefit only Gertie. And there was fear!

Upon fear he paused. Did any man have reason to fear the squire? And why was he afraid?

Pliny Pickett, conductor on Scattergood's passenger train which plied up and down the valley, came up the street to make his daily report. He stopped, but his employer did not look up.

"Howdy, Scattergood," he said.

"How be ye, Pliny?"

"Town's kind of stirred up, seems as though."

"Seems as though," agreed Scattergood. Then, "The squire wa'n't a killin' man, d'ye calc'late. Eh?"

"Wouldn't 'a' killed a sheep."

"Um. . . . "Wa'n't a vindictive man, nuther?"

"Not what you'd call," said Pliny.

"Mild-like," said Scattergood.

"But sot," said Pliny.

"Uh-huh. Kind of stubborn and determined. . . . My hoss ain't hitched, Pliny."

"I'll hitch him."

"You 'n' me is goin' for a drive. Kind of want you to think at. Uh-huh. I'll talk and you jest set. Hope everybody hain't been tramplin' around."

"Around where?"

"Them woods the squire was shot out of."

"Um. . . . I'll git the hoss."

PRESENTLY they were driving down the road in silence. It was fifteen minutes before the old hardware dealer spoke, and then it was to say, "Squire wa'n't shot for what he had in his pocket; 'cause his pockets wa'n't disturbed."

"So I heard tell."

"He was shot," said Scattergood, "for what he had in his head."

"Mebbe so."

"But what was it he had in his head?"

"I dunno," said Pliny.

"Nuther do I. But, Pliny, when we git to know what he carried there we'll be cluss to knowin' who done the shootin'."

"Then 'tw'an't Gertie."

"*If* the squire had suthin' in his head, 'twa'n't Gertie. If he didn't have anythin', then 'twas Gertie. All depends on that."

"What could he 'a' had in his head, Scattergood?"

"Suthin'," Scattergood said, "that somebody calc'lated it was wuth a killin' to keep from leakin' out of it."

"You're guessin'," accused Pliny.

"I'm reasonin'," said Scattergood. "It's got to be that—or Gertie."

"You mean he knowed suthin' about somebody?"

"That's how I look at it."

Silence again for a quarter of a mile, then Pliny, looking ahead, said, "Looks like the place, Scattergood."

It was the place. A deputy lounged on the roadside, but arose upon their stopping.

"Howdy, Dep'ty," said Scattergood.

"Howdy, Scattergood."

"Keepin' folks from tramplin' the woods?"

"Aim to."

"Them orders include me?"

The deputy scratched his head. There were no exceptions mentioned in his superior's directions; but in Coldriver Valley Scattergood Baines was an exception to most things. He was one who could make or unmake sheriffs, if he set his mind to it.

"Calc'late you kin look around if you step careful," he said.

"Show me where the gun was found," said Scattergood.

They walked to a spot ten rods from the road and the man pointed. "She was found a-layin' under that bush."

"Um. . . . Shootin' done from here, d'ye calc'late?"

"Found the shell layin' under this tree. Looks as though."

SCATTERGOOD went gingerly to the tree and stood looking down at the spot upon which the murderer stood when he looked through the sights to take the life of the squire, driving along the road.

"Um. . . . Didn't stand here long. Jest stepped to this place to shoot. But he must 'a' waited some'eres near. Now, where's a likely place?"

He peered about him. A dozen yards to the left and slightly nearer the road was a growth of young spruce, dense with boughs intermingling—ideal cover for one who lurked.

"I bet you he squatted in there till he heard them buggy wheels," Scattergood said, and moved in that direction. "Um. . . . Folks allus takes the line of least resistance. Must be an openin' in. Um. . . . Here she be." He pushed his way into the narrow lane through the young trees until he came upon an oval spot some six feet in diameter. From the lower edge of this the road could be seen, but too much undergrowth intervened to make a shot certain.

"I'm guessin' he squatted in here till he heard the squire a-comin' down the road," Scattergood said.

"He?" The deputy signified his surprise at the masculine pronoun.

"Jest a figger of speech," said Scattergood. "Sat here quite a spell. Uh-huh. Kind of impatient, too, the way he gouged into the ground with his heels. Now it 'ud be int'restin' to know how he passed away the time, wouldn't it? When one man's a-layin' in wait to kill another, what does he do with his arms and laigs? Must be quite a chore, Dep'ty. Arms and laigs is bound to do suthin', if 'taint no more'n enjoy cramps."

"He was a kicker, all right," agreed Pliny.

"Nobody," said Scattergood, "kin sit around a place like this here for an hour, say, and not kind of write his name. Now, if I was one of them detectives like you read of, it 'ud all be clear to me. No two folks acts alike. Nobody else in the world 'ud 'a' done jest what the person did that sat here—if only we knowed what it was he done."

"He kicked his heels," said Pliny.

"That hain't illuminatin'," said Scattergood. "W-al, I calc'late we seen all's to be seen."

"And that wa'n't much," said the deputy.

Scattergood made no rejoinder, but walked back to his buggy, nodded good-by to the officer and drove back toward Coldriver with Pliny.

"Kind of useless," Pliny hazarded.

"Passed away the time," said Scattergood."

WHERE LIFE IS BETTER

Californians Inc. has published a beautifully illustrated 48-page booklet *"California, Where Life is Better."* Your copy is ready—send for it with the coupon below.

hat kind birds are in YOUR *rden this winter?*

Mocking Birds? Fat Plumed Quail? Purple-Throated Linets? The Californian knows hem all, even in city suburbs.

WHERE would you rather plant *next* year's garden than here in Calia? Perhaps you are one of the hun-s of thousands of Easterners who have the roses in bloom over our windows Christmastime, the green fairways of golf courses, the all-year highways ugh the giant redwoods, the bees hum-g in the almond-blossoms in February. n't all of it make you want to stay—the writer of the letter on this page?

ou can. The statistics of average prop-wealth, average savings deposits, age automobile ownership—of all the gs that denote prosperity—show that fornians are about *twice* as well off as average American family. Where five lion people are so prosperous, there is m and opportunity for more who can g with them enough ability and capito assure a good start.

Look it over this Winter

ome to San Francisco and see for yourf how busy we are, and how we are wing. In this metropolitan area about Francisco Bay, there are more than a lion people now. The annual output of great industrial plants exceeds a billion lars yearly. Ships pass in and out the lden Gate every forty minutes, bound r from the ports of all the globe. Giant ce buildings line Montgomery Street, ich men still living remember as a sandy ch. And every year the bulk of $700-, 0,000 of new wealth created by Calinia agriculture alone, pours from the eat Valley and neighboring valleys ough their rail and water and market dets on San Francisco Bay.

It's a Great Vacation!

n all this solid and increasing activity, u will need only adequate capital and lity to make it possible for you and your nily to prosper as others are doing, and to enjoy, every day, the same pleasures of climate and varied recreation that brings thousands of people to California for their summer and winter vacations. Read this authentic letter from a family who have proved it for themselves:

"San Francisco, September 6, 1927.

"We came to California from one of the prairie states, and rented a home for the palm tree that stood in the front yard. Last winter wat the second we have spent in California, and it seemed wonderful again just to go outdoors to a green lawn on which a flake of snow has never fallen; to send the children to school without mittens; to see gay-colored birds bathing in the garden fountain in mid-winter.

"Yet we can have snow, too, and go tobogganing on week-ends, just by a few hours' motor trip to Yosemite in winter, and come back home to a day of golf or tennis. There is more in California than a busy man's family can find time to enjoy, but on week-ends and summer vacations we are discovering ocean beaches and mountain lakes and little valleys covered with orchards—delightful places different from anything we have known before.

"All these opportunities for fun could not mean as much to us, of course, if it had been hard to get a start in business in San Francisco. But even in the short time since we came, it has been possible for me to get further ahead in my business than I could have done in an equal time back East. *(Name on request)* L. H. E."

San Francisco is headquarters for CALIFORNIANS INC., a non-profit organization of citizens and business firms who are interested in the sound and permanent development of the State. It is an organization that can help you in many ways—with information on any industrial, commercial or agricultural subject, or in planning your trip to California and the Pacific Coast.

CALIFORNIANS INC. has published an interesting 48-page illustrated booklet, "California, Where Life is Better." It is free—send for it with the coupon below.

Mt. Tamalpais, across San Francisco Bay

What *every San Franciscan* owns:

Climate: Average 59° in summer; 51° in winter. Less rain falls in San Francisco's wettest month (January) than in Atlantic Coast cities in July. No extremes of heat or cold.

Recreation: San Francisco is America's coolest summer city. At the middle of a thousand miles of seacoast, and the hub of railroads and highways leading to four national parks and millions of acres of mountain playgrounds.

Markets: Geographical and commercial center of Pacific Coast. The chief seaport, carrying 40% of all imports and exports. Over 1,000,000 people in the San Francisco metropolitan area.

Industry: San Francisco Bay District's annual manufacturing production exceeds a billion dollars a year.

Growth: Seven times as great, from 1921 to 1926, as the rate of growth of the country at large—seven times as many new customers each year for San Francisco business.

Art, Music, Literature: The cultural capital of the West with a widespread artistic, musical and literary life among its people. One of the three colorful "story cities" of America.

Crop Wealth: The outlet and commercial headquarters for the bulk of California's $700,000 000 annual farm production.

For every San Franciscan, here or on the way, these advantages spell *opportunity*

It was the day of the hearing—that preliminary proceeding before a magistrate to determine if there exists enough evidence against the accused to warrant holding him for trial. Gertie Tingley had been escorted from the home where she had lived since her adoption, to the court-room presided over by Justice of the Peace Goodspeed. The court-room was jammed; the streets were jammed. It was a holiday in the valley.

Gertie was to be defended by Johnny Bones, Scattergood's lawyer, not so youthful now as he had been upon his first association with the old merchant. Beside the accused at the table sat Milt Green—openly holding her hand.

SUCH evidence as was available to the prosecution was adduced under oath, circumstantial in its nature, but pointing toward Gertie. Prejudice pointed its finger at her. Johnny Bones did not cross-question, but left the facts adduced by the people as admitted and indisputable. When the prosecution rested Johnny arose to address the court briefly:

"I shall not ask Miss Tingley to take the stand—unless it shall prove to be necessary. In fact, I shall call but one witness. Mr. Baines, will you step forward and be sworn?"

Scattergood lumbered forward, raised his right hand, took his oath to tell the truth, the whole truth, and nothing but the truth, and seated himself heavily.

"Mr. Baines," Johnny began, "on August 14th, the day of the shooting of Squire Tingley, did you visit the scene of the crime?"

"I done *so*," said Scattergood.

"This proceeding," said Johnny, "is more or less informal. It is to arrive at facts in the easiest way. Therefore, Mr. Baines, will you tell this court what you found in or near the scene of the crime?"

"W-al," said Scattergood, "I see where the squire was found, and where the gun was found, and the spot where the murderer stood when he done the shootin'."

"Was that all?"

"No. I knowed he didn't wait on that spot, so I searched around till I found the place where he did wait."

"How did you know it was the place?"

"The' was signs that told me."

"Were there any signs to tell you who it was that waited?"

Scattergood cleared his throat. "The' was signs there. Now, 'fore I answer that right out, I got to do some talkin'."

"Talk up, Scattergood," said the justice.

"Everybody," said Scattergood, "is different from everybody else. We got different faces and different shapes; but the most difference is in our habits. You kin recognize folks by their habits if their faces come to be changed so as they look like somebody else."

"What habits?"

"One's they hain't conscious of havin'. Now, take for instance: One man will allus draw squares on a piece of paper when he's settin' near one. He jest can't help it. Another man'll twiddle his fingers agin his knee. Some men sniffle. Some men do this and some do that. But everyone has got some one habit that marks him off from everybody else, so if a body with eyes was to come into a place that man had been for an hour, he could tell who the man was."

"I think I understand," said Johnny. "Everybody unconsciously leaves his signature upon a spot he occupies for long."

"That's the idee. He can't help himself. I knowed a man that couldn't set in the woods 'thout pickin' off twigs and peelin' 'em with his thumb nail. Only man I ever see that done it. He couldn't help himself. Prob'ly, he never knowed he done it. Jest an example."

"Did this person who lay in wait for the squire have such a habit?"

"The' hain't no doubt of it," said Scattergood. "He wrote his name like he was registerin' at a hotel." Suddenly the old man got to his feet. "Hey! Didn't I tell you you sh'ud guard all them doors and winders! . . . And now, jest when I'm aimin' to name the man! . . . Git a guard onto that side door! Quick!"

"Name the man," said Johnny.

"His name's—"

But there was a sudden commotion, a vicious, thrusting rush for that unguarded side door, a sudden babel of sound, shouting, scuffling, thudding blows. Then the voice of ex-Sheriff Ulysses Watts bellowed above the uproar: "I got him, Scattergood. I got him so's he can't git away!"

Scattergood stood up to look. His face remained impassive, but he nodded his head. "The name that was wrote on that hidin' place in the young spruces," he said, "was Dep'ty Sheriff Penny. I calc'late that's all, Jedge."

But it was not all. Deputy Penny was groveling in terror. "'Twan't all me," he screamed. "I jest done the shootin'. But I was put up to it. I hain't so guilty as him." He struggled to be free. "I hain't goin' to suffer alone, neither. He put me up to it."

"Cart that man off to jail," bellowed the new sheriff, advancing threateningly.

"Keep him off of me," whined Penny. "He's the feller behind it. It's him. Sheriff Newsome. Yes, sir. 'Cause the squire 'd got the evidence agin him, and was a-comin' home to turn it over to the authorities."

"What evidence?" demanded ex-Sheriff Watts.

"Usin' his place as sheriff to fetch in whisky from Canady," said Penny. "He's been doin' it right along, and me 'n' other dep'ties has been a-helpin'. And the squire, he clinched the evidence to Higgins Bridge that day."

SCATTERGOOD, with Johnny Bones, walked up the street with Gertie Tingley and her sweetheart—toward the home which would be theirs together very shortly.

"But, Mr. Baines," said Milt, "I hain't got it through my head yit what it was Penny done that give him away."

Johnny Bones chuckled.

"I mean what it was he done amongst them spruces that told it was him."

"I'm wonderin' too," said Scattergood. "What you sayin'."

"That I'd kind of like to know myself," said Scattergood. "I studied that place mighty hard, but I couldn't make out nothin'. Though the' hain't no doubt he left some identifyin' sign visible to somebody, somehow."

"Then however'd you know 'twas him?"

Digitized by Google
Original from
STATE UNIVERSITY SYSTEM OF FLORIDA

"I didn't," said Scattergood. "Not ill he told me by bustin' for that door. No, sir. I was mighty curious to see who was goin' to jump—or if anybody was. You see, I told him everybody left some sign, and that got to stirrin' up his guilty conscience. Uh-huh. And I told him he left some sign, which he must 'a' done, thought I didn't notice it. . . . And then I kind of offered him an invitation to git away through that side door. When he up and accepted it, I knowed."

"But—"

"It come out about like I calc'lated. Folks mostly acts like human bein's. Rig up a set of circ'mstances that'll make one man act a certain way, and it'll make most folks act the same. I jest rigged the circ'mstances and let 'em go to work. Penny was obligin'. . . . Um. . . . I calc'late Ulysses Watts'll have to be sheriff agin." He paused, and Johnny paused with him. "G'-by," he said abruptly.

"But we—I—haven't thanked you, Mr. Baines," said Gertie.

"G'-by," said Scattergood; and, turning his broad back, he ambled hastily down the street.

Where There Isn't a Will There's a Way

(*Continued from page 43*)

or Way. I feared you would elope off with one of those jazz-hoppers or whatever you call them. Thank heaven, you'll have a church wedding, though what your poor father will say to the cost of it I don't know!"

That same evening at the dinner table Will and Way announced their engagement to Effie May, and, for once in his life, Timmerson Brown did not come back with a humorous remark. He dropped his fork and stared at his sons.

"But here! Wait a minute!" he exclaimed. "Do I get this idea? Both of you engaged to the same Wrinch girl? Is that what I heard you say?"

"Yes, sir," said Will. "But that, of course, is only temporarily, sir. It just happened so, Father. Effie May is such a darling, and I did rush her pretty hard—"

"And you may be sure I wouldn't take 'No' for an answer, sir," said Way.

"So she's going to let Way and me—"

"Effie May Wrinch?" Mrs. Brown interrupted Will. "Is that the girl with the beautiful hair? Is it the ice man's daughter?"

"Mother! You know her," exclaimed Will. "I introduced you at the East Orange game."

"I remember her quite well," said Mrs. Brown. "Isn't she rather—I mean she isn't—she's not the intellectual type. I don't mean she's light, but—"

"If you mean she isn't a long-jawed high-brow," said Will. "She's a little fairy made of woven sunshine!"

"She isn't made of sunshine," said Way. "She is the sunshine itself!"

"I must be thinking of the right girl," said Mrs. Brown. "I dare say I shall love her when I know her better."

"But about this business of both being

TO GET THE TRAINS THROUGH . . . SAFELY, SWIFTLY AND ON TIME

The Altoona Works are the largest of a chain which build and recondition locomotives, manufacture cars and other equipment. In these shops alone over 12,000 men are employed.

Another Giant is ready for the road

The work is finished. The traveling crane swings the huge locomotive to the tracks. Another giant is ready.

Tough metal has been wrought into a mighty machine. Yet in the next room stands a scale so sensitive that it will record the weight added to a paper by a penciled signature.

In these vast Pennsylvania Railroad shops brute power works at the side of exact, scientific precision.

In manufacture of equipment the work ranges from building locomotives to measuring microscopic fractions of an inch, from shaping massive forgings to fashioning delicate stained glass lamp shades.

Diners, day coaches, freight cars, whole trains are built by hundreds.

Here is fashioned comfort for the traveler. Here is built the machinery which makes possible safe speed. Here equipment is kept up to exacting standards.

At the Altoona Works this work requires the efforts of over 12,000 men representing widely varying trades and professions.

At other shops thousands more carry on the task. With their companions who operate the trains these shopmen all share in the common aim—the safe, swift, punctual movement of the trains.

Leaders of the largest fleet of trains in America

LIKE A FINE HOTEL ON FLYING WHEELS

LOS ANGELES LIMITED

Leaves Chicago
8:10 P. M. daily

Take the pacemaker of luxury to the land of old romance—a journey of only 63 hours with steward, maid, waiters, porters and barber, attending your needs instantly, surrounding you with a fine atmosphere of service and courtesy.

As you speed smoothly away from the chill of winter, the arresting scenes en route are made doubly enjoyable by the luxurious appointments of the Los Angeles Limited*.

Seven other fine fast trains to California, including the 63-hour San Francisco Overland Limited*; Gold Coast Limited; Continental Limited; Pacific Limited; Pacific Coast Limited. *Extra fare trains.

See magnificent, mysterious Death Valley en route. Only $40.00 additional for an all-expense two day side trip, starting November 15th.

For booklets describing California, Death Valley and these fine trains: Address nearest representative or General Passenger Agent, Dept. 158, at Omaha, Neb.

THE OVERLAND ROUTE

UNION PACIFIC

engaged to her," said Mr. Brown. "That's not—well, I never heard of anything like that, you know. It don't seem to me exactly—"

"But that's only temporary, as Will said," explained Way eagerly. "Will and I are going to talk it out to-night, and decide which is to be which. We haven't had a chance to get at it yet. We aren't going to quarrel about it, are we, Will?"

"No, sir!" declared Will positively. "There's no girl in the world I would quarrel with Way over. We'll fix it up to-night. We thought we ought to tell you and Mother, sir."

"And quite right, too," said Mr. Brown. "And I have no objection to the girl whatever. I've seen her here and there, now and again, and I think she is a beautiful girl—very lovely indeed, and sweet and all that. I will say, boys, that she seems to me a little light; not frivolous, perhaps, but not a mental giant, if you know what I mean."

"I don't want a mental giant," said Will. "Neither does Way, I guess."

"Then all I have to say," said Mr. Brown, "is that when you have decided which of you is to marry her I will do my part. You can't either of you support a wife on what you are making; but I'll see that you get along until you can. . . . Is there any more of that pie left, Sarah? I could handle another piece."

"FATHER was fine," Way said when the boys were alone after dinner. "Mother will be all right too when she knows Effie better. Now, how shall we settle this, Will?"

"There's only one way to settle it, as far as I can see," said Will. "I'm going to marry Effie May. I gave her my word and I wouldn't break my word where Effie May was concerned, not for worlds. All you have to do is look at this thing sensibly. I'm the oldest twin and I have the right of first choice."

"All right!" said Way. "I agree to that. You had the right of first choice—but you did not exercise it. You let it lapse. I asked her first and she accepted me first, and that is all there is to it. She's mine, Will."

"Not for a minute!" Will said. "You say you asked her first, and I don't deny it; but that was only your bad luck. I was her final choice. It is like America—the Indians had America first and no one denies it, but then the English came along. They were the last, and they got it. You had Effie May first, but I came along last, so she's mine. She is mine, Way."

"The English haven't got America, as far as that goes," said Way patiently, "but the comparison don't apply to Effie May. It is more as if Effie May was a house and I made a contract to buy the house. The contract holds, even if someone comes along later and thinks he is making a contract to buy the house. The first contract holds. She is mine, Will."

"Effie May is not a house," said Will. "She is a girl."

"And a mighty sweet one," said Way.

"The sweetest that ever lived," agreed Will. "Now, be reasonable, Way. Everyone knows that a girl's last word is the only one that counts. Thousands of girls have broken thousands of engagements, and married—"

"Effie May hasn't broken her engagement, as it happens," Way said. "Legally, Will, Effie May is not engaged to you. A girl can't be engaged to two men at once."

"A girl is," said Will.

They talked until almost morning, but it led only to each thinking of new reasons why his claim to Effie May was the more sound and logical and undeniable.

"I'm sorry, Will," Way said, when they were so sleepy they were yawning, "but this won't get us anywhere. Are you willing to wear spats and a stovepipe hat at the wedding?"

"I'd wear anything. I'd wear a bathing suit and a gas mask. I'd wear a sunbonnet and go on stilts. I'm going to marry Effie May!"

"I'm sorry," Way repeated. "But you'll have to get that notion out of your head. *I'm* going to marry Effie May. That's final; but no hard feelings, Will."

"No, indeed; no hard feelings, Way." And they shook hands and went to bed.

THE next evening the local newspapers held two notices, paid for. One was: "Engaged. Mr. Willard Brown announces his engagement to Miss Effie May Wrinch. The wedding will be at the South Side Chapel, at high noon, June first." And the other was: "Mr. Wayland Brown announces his engagement to Miss Effie May Wrinch. The wedding will take place at noon, June first, at the South Side Chapel."

The appearance of these notices created the inevitable comment and interest, and hundreds of persons asked Will and Way and Effie May about them. Effie May was flutteringly excited herself, and she did not conceal anything. It was delightful to tell about Will and Way, and almost everyone thought the complication was extremely romantic.

Any girl, they agreed, might find it hard to decide between the twins and, since the twins were willing to make the final decision, it was fair enough for them to fight it out in their own way.

Effie May went ahead with her preparations happily, and Will and Way went ahead with their far less numerous ones, and the matter of the final decision seemed to have reached a deadlock. Mr. Wrinch sold a pair of mules, and let Effie May have money for a trousseau and Mrs. Wrinch have money for the decoration of the chapel and the other wedding expenses. There wasn't even any trouble about the invitations. Both of the twins had their mother's maiden name for a middle name, so Effie May just had the engraver use the initials: "Effie May Wrinch to Mr. W. L. Brown." It wasn't exactly proper, but it would do.

Will and Way each bought cutaways and spats and silk hats, and each bought a marriage license from the county clerk. They went together to see the Reverend Mr. Raylor.

Fortunately, they had the same friends, and together they selected the ushers from the militia company. The matter of a best man settled itself; it was agreed by Will that Way should be his best man, and it was agreed by Way that Will should be his.

Each bought Effie May an engagement ring and she wore them both with great pride. Each bought a platinum wedding ring for use in the final ceremony. Each evening Will and Way called on Effie May

together, and on the way home and until long into the night they fought for her with words.

Mrs. Wrinch accepted the situation placidly. Either young man would make an excellent husband, and theirs was the duty of deciding which should marry Effie May.

As time passed, however, Mrs. Brown began to be nervous. She feared matters might remain unsettled at the very last minute, and end in great distress for Effie May.

She could visualize the scene at the chapel at noon on June first, with the Reverend Mr. Raylor waiting at the altar, the invited guests seated, Effie May coming up the aisle on the ice man's arm with all her lovely girl friends in attendance, and then Will and Way both stepping from behind the bank of flowers and both claiming her!

In such a situation Mr. Raylor could not be expected to do anything at all. Certainly, it was not his duty to decide which two he should marry. It would be a dreadful state of affairs—nobody would be married and everybody would be disgraced. In this dilemma she spoke to Timmerson Brown, but he gave her no comfort.

"I believe you think it is a joke!" she said indignantly.

"Well, isn't it, in a way?" he chuckled. "I can't kidnap one of them, can I? Can I break one son's heart? I've told them to toss pennies for her, but they won't. I've told them to put on gloves and fight for her, but they won't. They won't run a race for her. They won't risk their chances."

"I'll talk to Effie May," Mrs. Brown said.

An ice man always has a telephone, and she telephoned to Effie May and asked her to come to the house. She had tea and some nice cakes for her, and then mentioned the subject tactfully.

"You haven't decided yet which of my boys it is to be, Effie May?" she asked.

"I decide?" said Effie May, opening her eyes very wide. "But they said they wou'd decide that, Mrs. Brown. Why, I couldn't decide! I couldn't be so mean to either of them."

"And I'm afraid they won't decide," said Mrs. Brown; and she told Effie May what an awful thing it would be—almost desecration—to have the wedding go forward to the point where Effie May reached the altar and nothing decided. At this Effie May became quite serious.

"I hadn't thought of that, of course," she said. "There wouldn't be any wedding then, would there? I'd be a bride without a husband. And Father would have sold his mules for nothing; all that money wasted. I'll tell you, Mother Brown! You tell me which to marry!"

"Dearest," said Mrs. Brown, "I couldn't! They are both such dear, fine boys. You must decide."

"*They* must decide," said Effie May. "They said they would, you know."

THE morning of the wedding was beautiful. Never had there been a brighter, sunnier first of June, and the interior of the chapel was beautiful too. It was packed to the doors, and it seemed as if half the population of the town had massed outside, for the interest in the Will

Even a child can pick the best way to go to California

THE Santa Fe is the luxurious double-track way to winterless California. In splendid comfort you speed through the Southwest.

The Chief—extra fast, extra fine, extra fare—slips smoothly over half a continent in two business days—Chicago to Los Angeles.

The Santa Fe operates four other fine transcontinental trains—the California Limited, Navajo, Scout and Missionary.

Fred Harvey dining-car and station dining-room meals set the standard.

What would you give *now*?

To have discovered music when you were seven instead of seventeen! Or perhaps a talent for drawing; or the knack of making things; the fascination of plant and animal life; the pleasures of good reading!

* * *

Child Life today brings this opportunity to more than 250,000 girls and boys three to twelve years old. Joyous material from which to develop permanent interests!

Every month there are fascinating stories, poems and plays by such well-known authors as Padraic Colum, Carl Sandburg, and others equally beloved; articles on music, patriotism, lives of great men and women; true tales of far-away lands by Frederick Starr.

No end of beautiful illustrations, many in black and white to be colored. Games, contests, puzzles! Sewing and cooking made easy for girls! For boys, things to make with hammer and saw. Contributions by the children, too—letters, stories, verses, snapshots!

Why not make some child happy with a year's subscription? Only $3 for twelve generous issues announced by an attractive gift card bearing your name. Mail check or money order today. Single copies at your news stand, 35 cents.

and Way and Effie May wedding had increased as the days passed and no decision had been reached by the two young men.

Mrs. Wrinch, arranging Effie May's veil with the assistance of the maid-of-honor and the bridesmaids before they left for the chapel, gave her some sound motherly advice.

"Them boys," she said, "maybe won't make up their minds at all which is to marry you. If they don't, Effie May, you'll have to keep your wits about you and decide quick when you get to the altar. Don't you like one of them the least bit better than the other?"

"No, I don't, Ma," Effie May said. "I like them both the same. I won't choose. I can't choose. It would make the other one so unhappy, and it would be me that had done it. They've got to decide!"

Effie May, as she stood in the vestibule of the chapel a few minutes later, was more beautiful than she had ever been in her life. Her mother gave Effie May's veil a few final touches, and an usher gave Mrs. Wrinch his arm and escorted her to the seat reserved for her.

The little chapel was now packed to suffocation and the sexton closed the door. The ushers lined up two by two, the flower girl and the maid of honor and the six lovely bridesmaids took their places, and Effie May put her hand on her father's arm.

"Left! Left! Left!" Mr. Wrinch was saying under his breath as the church organ burst forth with the thrilling strains of the wedding march, and he got off safely with the left foot first. But, like all the others in the church, he was unable to take his eyes from the screen of flowers behind which all knew that Will and Way were waiting, one soon to step into view as the groom and the other as the best man.

AS THE march up the aisle began, the Reverend Mr. Raylor came from behind the screen and took his place before the altar, facing the approaching bridal party. But he was alone.

In one front pew Mrs. Brown crushed one hand in the other with nervousness, and even Timmerson Brown turned red in the face and wiped his cheeks with his handkerchief. In the other front pew, Mrs. Wrinch tapped the floor with her toe and bit her lips. And still no one followed the Reverend Mr. Raylor from behind the screen

The wedding party was half way up the aisle. Mr. Raylor turned his head and looked toward the flowered screen. No one was looking at the bride; everyone was looking at the screen.

Invisible to the wedding guests, Will and Way were standing face to face and eye to eye, unagitated but unyielding.

"I asked her first, Will," Way said. "I'm going to marry her, Will!"

"I'm going to marry Effie May, Way," Will replied firmly. "She gave me her promise last, Way."

"Will," said Way, "I am going to marry Effie May. Take your place as my best man; they're starting up the aisle."

"I'm ready to go out when you are, Way," said Will. "But get on the other side, that's where the best man stands. I'm going to marry Effie May!"

It is the custom, as everyone knows, for the groom to buy the wedding ring, and Will had bought one—solid platinum. So, too, had Way—also solid platinum. At the appropriate moment in the ceremony the best man hands the ring to the groom and the groom places it on the bride's finger, repeating: "With this ring—I thee wed—and with all my worldly goods—I thee endow."

All in the chapel were standing now, staring at the screen. As the bridal party reached the altar the ushers and bridesmaids divided and stood at one side and the other, the flower girl dipped to arrange Effie May's veil on the carpet, and the Reverend Mr. Raylor looked toward the screen and coughed meaningly.

BEHIND the screen Way Brown, his face as white as chalk, was fumbling in his waistcoat pocket with a white-gloved finger.

"Will," he said in a strained whisper, "go and marry her. I don't deserve her—I forgot the ring!"

He pushed Will from behind the screen, following close behind him, and a great sigh went up from the assemblage. Mr. Wrinch drew his arm away from Effie May and stood off to one side, and a reporter sidled toward the door to get the news to the afternoon edition of his paper.

The notes of the wedding march died away and the Reverend Mr. Raylor began the wedding service. But Will Brown drew back and gently pushed Way into the place at Effie May's side, and Way Brown was wed to Effie May Wrinch.

"But, Will," his mother said to Will later in the day, "I don't understand! It looked for a moment as if Way was going to let you marry Effie May."

"Yes," Will said wearily. "Way forgot the ring. He felt ashamed and he gave her to me. I had my ring in my pocket. I hadn't forgot mine."

"And then you resigned her to him, you noble boy!" cried Mrs. Brown.

"No," said Will, "I had to do it. It had to be done. The best man *always* hands the ring to the groom, and I had the ring, so I had to be best man. I couldn't be the bridegroom, because Way didn't have any ring to hand to me. You can't go juggling rings around when your fingers are all muffled up in brand-new white kid gloves. Fate settled it!"

Everything gets settled one way or another.

"And you know, Way," Effie May said as soon as she and Way were alone, "I believe I loved you best all the time, only I didn't know it. Isn't it wonderful?"

"Wonderful!" Way agreed.

And, still later that day, when Way had removed his white kid wedding gloves and stuck his fingers in his waistcoat pockets, he found there a platinum wedding ring, down in a pointed corner of the pocket where a gloved finger could not have found it. Three stitches that had not been put where they should have been had left that point in the corner of the pocket.

Whether Will or Way should marry Effie May Wrinch had been decided by a slight flaw in the black thread on the sewing-machine of a man of whom Will and Way had never heard—Mr. Isaac Blinsky, vest maker, late of Russia, but now of New York.

What a Man in Politics is Up Against

(*Continued from page 16*)

At this point Buzz woke up, roused nself out of his stupor, and said in a sky voice:

"I can see twenty."

Skillful politicians know with Walt hitman that "logic and sermons never nvince." But there are tricks of the ade. There is technique.

Governor Oglesby, of Illinois, opening ampaign at Belleville, began his speech saying:

"Fellow Citizens: The issue in this mpaign is very simple; we have got the ate House, and the Democrats want to rn us out and run the Government. ow, anybody knows that the Democrats n't run the Government; why, it's all can do!"

And there was Governor Hogg, of Texas, other mighty man on the stump. In e of his campaigns for governor, he was posed by an able lawyer who rather shly, as it turned out, challenged him to joint debate. The Governor had the ening, and at the conclusion of his gument, as his opponent rose to reply, e Governor got up and said, "Just a ord, please." Now this opponent did t present quite so imposing an appearce as Hogg did; he was a stumpy man, th a small head, short legs, and a round dy, bulging in the middle, like Falstaff, d, standing there beside the commandg Hogg, he presented a droll and somehat absurd appearance. Hogg, raising s hand with an imperative gesture, as ough the crowd belonged to him, said, ith flattering patronage, and as one nerously appealing for fair play:

"Now, my friends, I want you to pay e same kindly and patient attention to y jug-shaped friend here, as you have own to me."

The crowd looked at the short, solemn ndidate with the protuberant paunch, urst into a roar of laughter, and the ebate ended there.

A GOOD many years ago—more than I like now to count—we had a state nator who won his election in a rather icturesque way. I can see him now, as he ame and went in the Senate Chamber, a lent giant, with massive shoulders, large, trong hands, and the weatherbeaten face f a man who has lived much out of doors. e was dressed in modest, loose, gray weeds, and there was something of native istinction about him. He represented a ural constituency. I do not think he ever nade a speech; but he had a great deal of nfluence in that body, because he had so nuch common sense, such a seasoned udgment. During his campaign in the receding autumn, he had gone every day nto the country, driving in a small buggy nd, seeing the farmers at work in the ields, husking the standing corn, he would itch his horse to the fence, climb over nto the field, and say:

"Boys, I want to talk a little politics to ou."

To this frank introduction of himself, he suspicious farmers, of course, would nvariably reply that they were too busy to talk politics, but my candidate would say:

"Oh, go right on with your work; I will keep up the down-row."

And thus, lending a hand and assuming alone the most difficult part of their task, that of husking the corn that had been beaten down by the wagon as it passed through the field, he would go on talking as he worked, about the issues of the campaign.

Those who would succeed in politics, that greatest of all games, must learn the technique, and they must learn it young; first in the precinct; then in the ward or township; then in the city or county; then in the assembly and congressional district; then in the state, and if the practitioner survives its innumerable and appalling accidents, then in the nation. As Mr. Dooley says: "Old men for the Council, young men for the ward." Our great Presidents have been masters in the technique of the art. Those who failed did so largely because they did not know the technique. And yet in politics, as in any other art, technique is not everything: to succeed greatly, a man must have genius, or shall we say ideals? There never was a greater idealist than Lincoln, and at the same time there never was so good a politician. He knew the technique from the ground up.

ONE reason why reformers do not often succeed is that they know so little about human nature. They try to force the hard and stubborn facts of life into the narrow limits of their theory, and as this cannot be done, something gives way. But it is never the facts of life and human nature. Facts are the only things in the world that will not yield to force. The politician is generally wise enough to adjust his theories to facts, which, I believe, is the scientific way. He must know men and, in these later times, women as well, which is perhaps a more difficult study, though he will master it, give him time. He has to change his technique now and then, as circumstances alter. It took our politicians in Ohio two or three elections to invent a new technique for the nominating primary, that noble reform which was to confuse and discomfit the politicians, and purify and redeem our politics; but after two or three elections, as I said, they learned how, and have had no difficulty with the system since.

And then politicians are interested in the end; reformers merely in the means. For most reforms are undertaken, not to reform or improve anybody, or to make anybody happier, but to gratify a love of interference. Incidentally, they may gratify a love of notoriety also, or provide someone with a job as secretary; but at bottom, I say, they are inspired almost wholly by a love of interference. The Reverend Father Ronald Knox says that these motives account for about ninety per cent of all the philanthropic movements in the world; he thinks that only about ten per cent of the whole may be attributed to a purely altruistic motive. This seems to be a rather generous allowance, but one hopes that he is right.

Replace *once* a year

NO air can escape at the mouth of your tire valves when equipped with Schrader Valve Insides in good condition screwed down tight.

But valve insides will age or wear out just as tires do. That's why it's a wise precaution to renew every valve inside once a year.

Schrader Valve Insides are sold five in a red metal box costing but 30c. Buy a box from your nearest dealer today.

Schrader products are sold by more than 100,000 dealers throughout the world.

This householder's experience is typical: "It was my first attempt with a blow-torch. And I burnt my hand severely. Then and there my wife spread on Unguentine. Pain stopped. Soon hand was O.K. No scar."

Days of pain a dreadful scar *prevented*

with the dressing for burns surgeons use

THE hazard of burns—can you neglect it? At any time you may face it, in your own home. The danger you well know—infection that poisons the whole system, the life-long handicap of hideous scars.

When you apply Unguentine, at once the pain is relieved. Healthy healing begins. Infection cannot live in Unguentine. And when the new skin grows, almost invariably *no scar is left.*

Keep Unguentine ready on your medicine shelf. Spread it on the wound thick. For severe cuts and burns spread liberally on gauze, apply and bandage lightly. Made by The Norwich Pharmacal Company, Norwich, N. Y. At your druggist's, 50 cents.

Street.....

City and State.....

The politician is, of course, pretty bad, and yet think of the dreadful existence he leads. Since democracy will not tolerate privacy, he must live in a glass house in the midst of a people whose chief amusement is throwing stones. He must be careful of what he does, what he says, what he wears, even what he thinks; he must take care not to offend the prejudices of those about him. He must cringe and shudder like any savage in the jungles of Africa in fear of ten thousand taboos. There is something pathetic in that strained, appealing smile he wears in the illustrated supplement, and in the motion picture; that touching anxiety to please and find favor; it affects the whole family; the poor wife must smile that way too, and roll up her sleeves and be photographed in the act of sweeping the front porch or frying potatoes for supper, just to show that she is no better than any other woman. Such is the inverted snobbery of democracy.

The motion picture is a powerful instrument of suggestion among people who believe in short cuts to perfection, and respond almost automatically to the stimulus of a "drive," so that in one week they will all obediently clean their back yards, or their teeth. We live for the motion picture, accept its standards, and look to it not only to celebrate but to create our heroes. The politician performs stunts for it; if he cannot be a farmer, he can at least be photographed in overalls with a hoe in his hand, or be represented as milking a cow. If he is not a musician, he can be pictured in the coils of the tuba of the Silver Cornet Band of his home-town.

And now that the radio is available one shudders to think of the awful possibilities. Instead of talking to those few hundreds who can be beguiled into the ward meeting, the speaker can sit at home in his pajamas and send rolling into the ears of millions his solemn and pompous platitudes.

AND yet, I wonder if we are not sometimes too hard on the politician. After all, his is not the only demagogy. There is a demagogy of art, of literature, of business. Who, in these days, is not trying to tickle the fancy and touch the pocketbook of the multitude? There is a current phrase that covers a multitude of sins, and that is: "We give the people what they want." Theatre managers, editors, and authors who pander to low tastes, all say that they are giving the people what they want. And that is what the politician is trying to do. In the end, public opinion governs in all countries, and politicians everywhere, often with secret misgivings, no doubt, are trying to satisfy that. Democracy has done away with courts and courtiers, but it has not done away with courting the favor of the crowd, in politics or business or art.

And as for cant, who is without it in a land where cant is the national vice? Do not we cant about our moral virtues, about our idealism, and boast of our superiority to all other nations in these respects? In business do we not cant about "service," and in our civic affairs about the "community spirit"? Are we, any of us, such shining examples of frankness and sincerity?

This necessity of courting the crowd no doubt keeps a great many men out of politics who might otherwise be attracted to them, and make better governors and mayors than those we have. But they would not make such good candidates, for the main question is not whether a man would make a good governor or mayor, but whether he would make a good *candidate* for the office.

And, once elected, the politician must, if he has a policy that he really wishes to carry out, begin to think of getting himself reëlected, for as his term is short at best, and all his energies are absorbed by irrelevant business, he never has the time to accomplish anything during his first term. He is a candidate all the time, and, one way or another, must "keep up the down-row."

A MAYOR'S day—having been a mayor I can speak of it with authority—begins with a lot of letters asking favors, offering advice, making criticisms or complaints, each one requiring a decision that ought generally to be in the negative. "I couldn't say 'No'," is the epitaph of many a genial politician; and that of many a surly one, "He didn't know how to say 'No'." In the daily run of letters to a political executive, there will be one or two that are anonymous, bespattering him with their abuse before he is aware. He should rise above such things, of course; and yet, hatred being so potent a force, they rankle all morning, and somehow blot out the memory of kindly letters that now and then strangely insinuate themselves into his correspondence. For so cynical has he grown that he suspects that those too are but entering wedges for some favor to be demanded.

Then, after the mail, a long line of callers, every one of them with an axe to grind. He wishes to satisfy them, of course; but that is impossible, for they are all actuated by self-interest, and all of these interests conflict with and antagonize one another. And yet each visitor cannot, for the life of him, conceive why his request should not be granted; it is to him, at that moment, the most important thing in the world, and he feels that the mayor should realize this, and bend every thing to this end. Each caller has just one problem to consider; but the mayor has a hundred; he has to think of them all.

Then come the various officials with their problems, submitted to them by their visitors and critics, an endless number of them, each one imperative, demanding an instant solution, for the longer they wait the worse they become. Some problems settle themselves if left alone, just as some letters answer themselves if neglected, but not in the City Hall.

At noon, the reporters come: it is question hour, the time for the daily interpellation, and the office-holder must be careful of what he says; for his replies, even when reported with the best will in the world and with every intention of representing his thought accurately, must appear, after all, as paraphrases, and to one who is at all fastidious about words they will have lost something of their quality. Not, perhaps, that this matters to anybody else, since, all men being equal, one man's English is as good as another's.

Though I hasten to record—the old

Protect Their Health with Healthful Heat

What a comfort it is to have even warmth in every room, every day, all Winter. Warm floors are so comforting to bare feet just out of bed, and children like to idle at their dressing and roll on the floor half-clad. They play on the floor by the hour if you let them. To be sure, they can't do that on cold or drafty floors. But why have cold floors?

The proper home heating system, if thoughtfully purchased, removes cold air from the floors, cleanses, moistens and warms the air, and circulates it gently back through the house. The Vaporized Warm Air Circulating System as installed exclusively by Holland Home Heating Service Men makes the home a health resort for Winter. It not only provides the warmth of Summer, but also automatically humidifies the air with the healthful moisture of a Summer day. Physicians agree that lack of moisture in the average home dries the tissue of throat and lungs and leads to much of the illness of Winter. You can prevent most of it with a Holland System.

Proper installation of home heating systems on scientific lines and established engineering standards has made this company the largest installers of home heating systems in the world. Everyone of our 522 heating service branches serve their locality with the same uniformity—delivering the certain measure of heat units each room requires, working carefully as trained by us, and covering your heating system with our factory guarantee bond.

If you want your heating system, no matter what make, cleaned, inspected, repaired, or replaced, just phone your local Holland Furnace Company. It is easy to get a Holland Heating Service man, day or night.

Get our free book, "How to Heat Your Home for Health and Comfort". It is full of information.

No Wonder *Men Are Proud of Wives Like Her!*

"Clever, brilliant, gifted," say her friends. "A wife in a thousand," says her husband. But she writes: "A Fading Wall Flower has been transformed by your inspiring book."

And This Book is now FREE to All Women!

HERE is the book that has brought new joy and happiness to hundreds of women. Within its 32 pages is described a new easy way to keep abreast of the times; a hobby that will add beauty to your home, that can bring you $10 to $25 a week for your spare time. No canvassing or tedious drudgery. We show you everything.

No Special Ability Needed

You need no special ability to become a successful member of the Fireside Guild. If you love color; if you like the deft touches of decoration that make a home so "livable;" if you like to "make things"—you have all the natural talent that is needed to quickly master all the delightful secrets of Applied Arts by the famous new simplified "3-Step Method."

Your Success Assured

Right at home, under the direction of M. Gabriel Andre Petit and his staff, you quickly gain skill in the decoration of lovely silk scarves, batik tapestries, block printed draperies, colorful book shelves, wall plaques of gesso and polychrome, tallies, bridge prizes, and a hundred and one new articles that will bring you big profits and add distinction to your home. Here indeed is a hobby that will gain the admiration of all who know you, that will set you apart as the "one wife in a thousand!"

Send Coupon for Book

It will bring you the entire fascinating story of the Fireside Guild. Simply fill in and mail coupon, enclosing 2c stamp for postage. Book will come by return mail. No obligation.

habit being still strong upon me—that the reporters were always very civil to me, and when they paraphrased my utterances very often improved them.

Then there will be a luncheon, and perhaps a speech after it, or an address of welcome to be delivered to some convention or other. As the delegates to the convention come from other towns, and have no local interests, they look upon the mayor kindly and sympathetically, and applaud his poor, well-worn speech—he hasn't had time to think out another for weeks—and afterward they come forward and congratulate him, and tell him confidentially what a rotten mayor they have in their town, and how much they wish they could have a mayor like him. And so, refreshed and encouraged, he comes away persuaded that he is not doing so badly after all; it really looks as though he might be reëlected.

BUT when he gets back to City Hall to see what new troubles and complications have arisen during his absence, what strikes have been declared, what crimes have been committed, and picks up the evening papers, he is reminded by what it says of him that he is, after all, but a poor and miserable creature, the worst mayor that ever imposed himself on the people, and that the city is going to the dogs on account of him. And he feels deflated and normal again, and looks forward to the row he is going to have at the meeting of the City Council that evening.

If he has to appoint someone to a vacant office—and he must be quick about it, before the candidates can multiply and torment the life out of him—aptness to the proposed task is the last qualification he can take into account; if the man he appoints has the ability to do that particular job, why then, of course, so much the better, but it comes only as a happy accident. Even if he is called upon to perform a function so simple as the naming of an honorary committee, he must look for sectional and racial qualifications; he must choose one member from the North Side, one from the South Side, another from the East End and another from the West End—and then find someone clever enough to manage these four without their suspecting it. He should too, at the same time, see that different nationalities are represented—except the Americans.

"What is your nationality?" asked a naturalized citizen of a friend of mine on board an Atlantic liner.

"I'm an American," my friend replied.

"Yes, I know," said his interlocutor, "But I mean what country were you born in?"

One of our councilmen who represented a ward in which there were a large number of Polish citizens came in one day on a matter of political life and death for him.

"All this talk about those Revolutionary patriots, Pulaski and Kosciusko, is all right," said he; "but what I want is some good, fat offices for some Polish patriots who are alive to-day and in my ward."

And there was another friend who ruled like a petty prince in the Hungarian settlement down on the other side of the river. He came to ask the appointment of one of his fellows to a post that required a highly technical knowledge. The man must know chemistry, among other mysterious things, and the incumbent was an expert chemist whose politics I new knew, though probably they were oppos to mine. I took great pains to explain highly technical nature of the work in th position, and how difficult it was to find man not only properly equipped but on who, for the small salary the city pai would accept it. My friend sat the stolidly listening to my careful and, as I trusted, convincing exposition of the difficulties in the way, and when I had done, he blandly asked:

"An' what we goin' to do an' he die?"

One might almost say that, in the management of public affairs, the people themselves have a standard entirely different to that applied in private affairs and act on another principle, succinctly stated to me once by a charwoman who came to see me.

"My husband," she said, "is too old and feeble to work, and I want to get him a job with the Government."

Of course any man's job seems simple and easy to outsiders, especially if he knows how to do it, and that of an executive seems simplest of all. Men on the rear platforms of street cars, any evening, are ready to solve his problems for him in a trice, and he is generously advised from all quarters; but his job has its own difficulties, and the nearer the job is to the people, the more difficult and exacting it becomes.

It is often said that running a political unit—city, county, state, or nation—is like running a business, but this is true only to a limited extent; the two things resemble each other in some ways, but they differ in this: that one is carried on for pecuniary profit, and the other is not. One serves a single interest; the other is expected to satisfy a thousand. So long as the one is efficient—that is, makes money—it succeeds, but there is no such easy test for the success of a political administration.

If mere efficiency is all that counts, and the smoothness with which the thing is run is the only test, then the best governed city in the world is Monte Carlo. Besides, there are a vast number of imponderables in the problem of government that never arise in private commercial enterprises: the man who keeps his eye fixed on one thing only cannot succeed in a political position. The political executive must have as many eyes as a fly, and have half of them in the back of his head.

AND then his moral problem is more difficult and confused. To whom are his fealty and loyalty due? To the people, of course, that amorphous and anonymous entity. What does it really mean, the people? A particular class—the working class, or the capitalist class, or the "good" people, or some other of those artificial and arbitrary divisions created by the unimaginative minds of pedants, doctrinaires and fanatics? But there are, in a hard and fast sense, no such classes, especially in a new country where society is in a fluid and undulating state. Is it a majority? But there is no such thing as a majority—that is, it is never majorities that initiate and bring things to pass; majorities may only approve of them, or acquiesce in them after they have been accomplished.

We used to have, long years ago, mass county conventions; the delegate con-

vention is a comparatively modern device. The mass convention was considered a highly democratic institution, and yet any four or five politicians who were agreed beforehand upon what they wanted could organize and run it without the convention ever knowing what was going on until it was all over. The only difficulty arose when there were two sets of four or five men each, whose interests conflicted.

Is anyone naïve enough to believe that in that famous miniature of the ideal democratic state, the New England town meeting, the political leaders of the locality did not know precisely what they wanted and how to get it? The task was more simple merely because the society was less complex, that is all. The world is ruled by minorities, even where democracy thinks it has got itself going full blast, as in Russia, where there is more tyranny and absolutism than in any despotism the world has known.

CANDIDATES are chosen by a few men, no matter what system of nomination prevails; and if the successful candidate is at all human—and he would not have been chosen if he had not been—he is apt to feel that he owes gratitude and fealty to those who "came out" for him first, and so put him where he is. And thereafter his whole career is one long, torturing effort to reconcile these two loyalties. If it happens that it is not precisely a political machine that nominated him, it is always some group, some faction or bloc; that is, some minority. So that he is confronted by a problem in ethics. If he fails to do that which his creators wish him to do, he is accused, not only by them and by all his friends, but by his own conscience, of having proved false to his friends; and the ideal of loyalty to one's friends is an old one in man, and a noble one.

In common talk we can find no better compliment to pay a man than to say that he "sticks to his friends and plays the game." And yet, on the other hand, sticking to his friends, he sometimes betrays a public trust. The latter is doubtless the higher and takes precedence; but the fact is that it is not so generally considered, except in the case of a betrayal that involves moral delinquency.

A man rises to public office by the efforts of his friends, and sometimes one of them asks, as a reward, a certain position. If the friend happens to be unsuited to the position, and the official appoints him, then he commits a public wrong; if he refuses, he commits a private and personal wrong.

It is not a pleasant position for a man who has a heart, and possesses ideals not much, if any, higher than those that are current in his own town and time. And in a land where fitness for the position is seldom the standard for selection, and where the executive thinks that his man is as likely as not to turn out no worse than the one his critics and ill-wishers urge him to appoint, it is not surprising that he should sometimes fail in this higher duty.

In fact, when one considers the general attitude of mind toward Government, the wonder is, not that our administrations are no better, but that they are as good as they are.

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

An English friend of mine, a member of e House of Commons, told me not long o that in America people seemed to him be so very careful of what they said, pecially on public questions. They emed to him to distrust their own inions, to be afraid that their views ight not accord with those that preiled about them.

I do not know whether this is characteric of us or not; I had never thought of before. But if it is true, it merely shows at everybody is affected by fear of the owd, just as the politician is. Perhaps is the result of the process of standdization that is going on. Since all en are equal, we must dress alike, act ike, look alike, speak alike, and, finally, rrendering the last fortress, think ike.

If this is democracy, then another trick as been played on humanity; once more e thing achieved has turned out to be mething else than what was intended; nce again, humanity, in trying to cure ne ill, has merely substituted another for . Unless democracy can provide a soil which the individual can grow and evelop, be original and different to others he pleases, if personality is to have no xpression, if there is to be no depth and nteresting variety in life, then good-by to rt, beauty, and the soul of man.

If men must be run in one mold, turned ut all alike, numbered and ticketed, with ll individuality rubbed off, if everything, rom rubber tires to novels, must conform o some fixed and immutable standard, as cales are tested by the city sealer of veights and measures, then the world night as well be turned over to the white ants, which have already organized and perfected a tyrannical system of efficient and dreary uniformity, and, according to Maeterlinck, are ready to eat us all up anyhow.

I FEAR that all this sounds rather pessimistic, but it takes a robust and indomitable optimism to survive years in public office. Pessimism is idealism turned sour by disillusion. Most of the pessimists whom I know, and they are not a bad sort, are men whose poetic imaginations led them to see too many possibilities in human nature and to expect too much of it; and when they were disenchanted they were too apt to take out their disappointment on the human race. Courts will always have their courtiers, and democracies their demagogues; but, even so, democracy *is* better than monarchy.

When I look back at those crowds, assembled at the noon hour about the shops and factories, or at evening under the tent, or in the dingy, smoky hall; when I recall the light that shone in their eyes, straining, perhaps, to see more than one star, I forget the selfishness that seemed to find its focus and center at the City Hall, and feel sure that there is no need for despair. At any rate, there is no harm in hoping.

What is it that is written in "*The Logia*"?

"Let not him that seeks cease from his search until he find; and when he finds he shall wonder; wondering he shall reach the kingdom, and when he reaches the kingdom he shall have rest."

✤ ✤ ✤ ✤ ✤

Young hair can stay yours!

Is your hair keeping young with you?

Back view, front view, do they tell two different tales of your age?

Youthful, thick, strong hair *belongs* with the clean-cut face of today. With only a few minutes' daily care every man can have it and keep it!

This simple treatment once a day will check falling hair within a short time:

EVERY MORNING wet your hair and scalp thoroughly with Pinaud's Eau de Quinine. Then with your fingers pressed down firmly, move the scalp vigorously in every direction, working the tonic into every inch of the scalp. Move the scalp, not the fingers! Brush the hair while still moist. It will lie smoothly just the way you want it.

At once you'll feel your scalp tingle with life—tiny hair roots are being nourished by blood vessels stirred to activity by the tonic ingredients of Pinaud's Eau de Quinine.

Soon, within a few days, you'll find the dandruff completely gone, for Pinaud's kills the dandruff germ.

Buy a bottle at any drug or department store. Begin to use it tomorrow morning. You will no longer worry about your hair!

In buying Pinaud's Eau de Quinine, look for the signature of Ed. Pinaud in red on the bottle so that you are sure to get only the *genuine* Eau de Quinine. Pinaud, Paris, New York.

YOUNG FEET MAKE HAPPY WOMEN

The Margaret

FEET that dance through daily duties, then are eager to take you adventuring. Feet as active at 7 p. m. as at breakfast. Feet that would rather fox-trot than nestle demurely under the dinner table. What wouldn't you give for feet like these?

Millions of women have found the priceless gift of happy youthful feet in

THE ARCH PRESERVER SHOE

— the Paris styled shoe that flatters the foot while its marvelous inner construction stops foot abuse.

The Arch Preserver Shoe prevents strain on your foot arches by a concealed built-in arch bridge that supports the long arch of the foot, and a specially modeled sole that supports the metatarsal arch. The flat inner sole, crosswise, prevents pinching. You enjoy the relief of permanent, proper support where support is needed, yet the shoe bends freely with the foot at the ball, the only place the foot bends.

Not one feature, but many exclusive patented comforts are found only in the Arch Preserver Shoe — yet these shoes are so good-looking you would be glad to wear them for their style alone!

Send the coupon for booklet and name of dealer who has Arch Preserver Shoes for you and your children.

ARCH PRESERVER SHOE
REG. U.S. PAT. OFFICE
"KEEPS THE FOOT WELL"

There is only one Arch Preserver Shoe. Its principles of construction are fully protected by patents. No shoe is an Arch Preserver Shoe unless stamped with the trade-mark.

Lathrop Studied Art Behind the Plow

(*Continued from page 34*)

New York; the National Gallery at Washington; Carnegie Institute at Pittsburgh; the Philadelphia Art Alliance; the Albright Gallery at Buffalo, and numerous others. In the hands of private owners his paintings had gone to all parts of the world. He had founded the famous colony of artists at New Hope, Pennsylvania, which includes a dozen figures nationally known in art.

For fifty years this former Ohio farm boy had been creating canvases, each of which in its sphere had added an intangible something to the brighter side of life.

It seemed to me then, even before I had heard William Lathrop's own version of his story, that, though there are more famous living artists, no one of them could more typify the *soul* of art—whether it be music, literature, or painting—than did this quiet, unassuming painter of New Hope. He was of his work, and his work was of him. Both belonged to all of us, as freely ours as the sunshine and the air!

And as I journeyed homeward, at the close of my talk with him, I found myself seeing beauty in the rain, which earlier had appeared only dreary and discomforting. I discerned in the muddy roadway color that I had never seen there before. The drab, leafless, countryside of that morning had become a delicious phantasmagoria of subtle color effects. The whole world had become new.

To see beauty in an ash heap, in a rusty tin can, and even in a puddle in the road—Lathrop had taught me that! He had taught me to see, as he had seen since earliest boyhood, a measure of the beauty in common things.

He was an unusual boy, of unusual parents. His Irish-born mother was of a family of students and lovers of the arts. His farmer father, Byron Lathrop, in another day and time, would have been a scientist, or a poet. A son of pioneers, circumstance and not his choice had made Byron Lathrop a farmer, and given him seventy stubborn acres near Painesville, Ohio. There, on the farm, William was bred. The only other children were two sisters.

It was a bookish family, in a bookish community. Painesville had been settled by New Englanders who had carried westward with them a traditional New England love of culture.

IN SUCH an atmosphere it was not strange that a boy of William Lathrop's talent was able to read and write before he was five years old. As he grew older, nobody regarded the boy as "odd" because he sat for hours studying a tree, or a cloud, or the windings of a country road. Nobody laughed at the grotesque and colossal heads which he carved with an old case knife in the tough blue clay of the bluffs, or at the crude sketches with which he decorated his slate or the sides of the barn.

Lathrop told me of one Christmas day. In this trifling anecdote of his boyhood you may see the very character of that little family, and between the lines read of the grim struggle with the soil, of the farmer who should have been a poet. The boy and his elder sister, this Christmas day, each received three presents: an orange, a bag of candy, and a lead pencil.

But lead pencils, even then, cost ten cents apiece. Two lead pencils would have been twenty cents. So a single pencil was bought and carefully cut in two—a half for William, the other for his sister, that each might be served alike.

That half-pencil contained more joy than a barrelful of carts and horses and tin soldiers. With it the boy could put his beloved trees and gray barns on every bit of paper that came into his hands. He could preserve forever that wisp of cloud, about to vanish!

WHEN William was twelve years old, his father told him that if he picked up the fallen apples in the orchard and sold them he could have half of the proceeds. The transaction netted him seventy-five cents. Direct to the drug store he went with this first money he had earned, and purchased a tube of Indian red paint.

He squeezed tiny worms of red paint onto the fence rails, the stones, and the earth itself. Then stood and marveled at the contrast of color he had achieved—bright red against gray, brown, green, and the purple of a field flower. The contrasting red accentuated the natural colors that were there; and he pondered their subtle shades, their variety, imprinting these on his memory.

This young farm boy went to his work in a riot of color, and color touched the spring of his emotions. Returning home one afternoon from school in Painesville, he stopped dead in the road, startled by a sudden impression of exquisite blue and yellow. He had caught the glow of these colors out the corner of his eye.

He looked about, puzzled as to the whereabouts of the colors. On the right was a river, beyond the river an ugly mud bank. Never before had he looked at mud for any sensation of beauty such as he had felt in the previous moment. Yet the sensation undoubtedly had come to him from over the river. Now, for the first time, he looked at the mud of the river bank, and *tried* to see beauty there.

All at once he saw: The bank was of clay—of yellow clay shot with streaks of blue clay. It was almost as gorgeous as a sunset. The water mirror of the river was tinted with reflections of this blue and yellow.

"But it is only mud," pondered the lad, who was now nearly fifteen. "How can mud be beautiful?"

And that day, Mr. Lathrop told me, he made a marvelous discovery. It was a discovery which was to transform him from a boy who loved to draw into an artist. He had not seen the beauty in the muddy bank, because he never had *looked* for beauty there. He had not looked because he—and every child for a thousand years—had been taught that mud was unbeautiful!

The world which he had always studied and loved, he began to study with fresh eyes! No longer did he limit his search for

"BIGGER AND BETTER"

A New Series by H. C. WITWER *Starting in Collier's for October 22nd*

"LADIES PREFER BRUNETTES" is the title of the first story in Witwer's new series. If you can imagine Witwer describing the adventures of a hard boiled, but handsome, prize fighter among the "beautiful and the filmed" of Hollywood, you will have some inkling of what is in store for you in this story—the first of his latest and funniest series . . . In it you will learn what happens when "Gentleman Jack King," *Boxing's Gift to the Screen,* gets knocked out by two blue eyes and a strip of celluloid—there's a laugh in every line and a surprise at the end.

"Decorations"

By LAURIE YORK ERSKINE *in Collier's issue of October 29th*

SIXTY MEN left the airdrome and six returned. No better or more gripping story of the death that dwelt in the sky during the war, has ever been written. Erskine, a former officer in the air force, has painted a vivid picture of men and machines that fought for the glory of it and gambled for the highest decoration any nation can bestow.

Collier's

Famous Short Features

YOU will find them in every issue. *"The Gentleman at the Keyhole"* with his low-downs on the high-ups in Washington political life; *"Picked Out of the Air,"* JACK BINN's radio classic; *"Tom Masson Says,"* full of humor; *"Catching Up With the World,"* by EDWIN SLOSSON, revealing amazing facts of science; and all the others.

NEWSY ✎ PICTORIAL ✎ BRIEF

Have you tried this new

"Pick-up" Drink

from Switzerland?

Refreshes your mind and body almost instantly . . . gives you new energy that outlasts the day . . . Write for a 3-day test

This will tell you of a delightful new way to banish afternoon "let-downs." To keep you at your best all day. Alert. Energetic. Purposeful.

Now modern science offers you a *natural* means to keep you "hitting on all six"—every minute of the day. A way that picks you up almost instantly. Both mentally and physically.

It is a delicious new food-drink called Ovaltine. Not an artificial stimulant. But a quick building-up beverage. Doctors advise it.

Thousands of successful people everywhere now drink Ovaltine regularly at home. In their offices. At soda fountains. It rejuvenates. It sets tired minds a-sparkle. We urge you to make a 3-day test.

Cause of loginess—how Ovaltine overcomes

Nine times out of ten, mental and physical "let-downs" are due to overstrained nerves or digestive unrest—or both.

Delicious Ovaltine instantly overcomes this trouble. This is why:

FIRST—It digests very quickly. Even in cases of impaired digestion.

SECOND—It supplies your system with certain health-building essentials which are often missing from your daily fare. One cup of Ovaltine has actually more food value than 12 cups of beef extract.

THIRD—Ovaltine has the unusual power of digesting 4 to 5 times its own weight of other foods you eat. Hence digestion goes on speedily and efficiently. Quick assimilation follows which is restoring to the entire body. Frayed nerves are soothed. Your mind clears and your body responds. You become alert, both mentally and physically.

Doctors recommend

You will like the flavor of Ovaltine. Unlike any drink you have ever tasted. It contains no drugs. It is the special food properties of Ovaltine—*and absolutely nothing else*—that bring its wonderful results and popularity. In use in Switzerland for over 30 years. Now in universal use in England and her colonies. More than 20,000 doctors recommend it. Not only as a quick "pick-up" beverage, but because of its special dietetic properties, they also recommend it for sleeplessness, nerve-strain, malnutrition, backward children and the aged.

A 3-day test

Drink a cup or glass of Ovaltine whenever you feel low or nervously tired. See how quickly it picks you up. There is a new zest to your work—to all your daily activities. *That is the experience of most Ovaltine users.* All druggists sell Ovaltine in 4 sizes for home use. Or they can mix it for you at the soda fountain. But to let you try it we will send a 3-day introductory package for 10c, to cover cost of packing and mailing. Just send in the coupon with 10 cents.

beauty to the conventionally beautiful things—the beauty of these was evident to everybody. Instead, he extended his search to all life, and especially to the commonplace which is closest to life.

This led to the question, What made beauty? What was it about one thing that made it impressively pleasurable over another? Long since, the youth had discovered that, with his farm work and his school work, he did not have much time to draw and paint. While he dreamed, and saw, and felt, he had furrows to plow, wheat to cradle, manure to spread. Farming left little time for painting. So, while he worked, in the mow and in the field, he sought the answer to his question. Unable to paint his impressions, he learned to memorize them. To memorize, he learned to analyze. In analyses, he learned the secret of what made beauty!

For instance: About his farm home was a grove of great maples; not ordinary maples, such as you see along the streets of your town, but maple trees that took on the characteristics of the oak. Their contours were irregular, their limbs twisted and gnarled, their bark rugged and seamed with the lines of time.

"Majestic maples," you would say. "Beautiful, magnificent old trees!"

But, why majestic? Why magnificent?

THE youth, who hadn't time to paint on canvas as he would, painted the maples on his mind. At night, in bed, he analyzed the mental picture.

And here, in time, was what he decided: Those maples faced Lake Erie. A century and a half, perhaps longer, they had stood there, facing the unbroken sweep of the inland sea. The winds and storms from out the north, hurtling across the lake's expanse, had assailed them. The trunks of the maples had swayed and bent; their limbs had been rent asunder; lightning had pierced and torn the armor of more than one. But still the old trees stood—victors, with victory written on their scarred breasts!

It was their strength, and courage, which made the maples of the grove majestic! It was their lordly defiance which made them magnificent! It was victory, the character begot of a fight won, that made them beautiful!

Then, character was beautiful. Struggle was beautiful. Courage was beautiful. But, *why?* asked the youth still again. These traits appealed to the senses; but through the *eye!* What attracted the eye?

He looked, more intently, and the answer was "color!" Color, linked with line and contour! It seemed that Nature, the master artist, had a way of taking all of her creations in hand, sorting them out, and rewarding them according to merit.

The sapling was beautiful as a baby is beautiful; but the oak had the beauty of a man who had met the trials of life victoriously. The one kind of beauty was passive, the other vigorous, and a noble story for all to read. Personality, in a word, in things as in humans, heightened and even in itself made beauty!

"But if this is so," reasoned Lathrop, "an ugly face may be beautiful, provided it has personality. Anything that has *lived* may be beautiful."

Was it so? If it was, beauty was everywhere!

"You," he said to me, "may see beauty

newly painted, finely appointed ship. e old freighter in the nearby dock you y say is ugly. The view you take is the sequence of your training. You have n taught that the thing which suggests nfort, ease, and luxury is beautiful, and t which suggests discomfort and toil is beautiful.

I learned that comfort and ease—and t—has nothing to do with real beauty. e costliest house is often an atrocity; humble cottage may be a jewel of uty. To me, the old freighter, rust-eaked and battered by the storms, is re beautiful than the newly painted . Its scars are the wound chevrons of service. The seas, and not men, have nted its colors; and the seas are master ists."

Beauty *was* everywhere, Lathrop found. e fault of people in general was that y did not look for it with open minds; y were guided by preconceived preju-es, the outcome of false training. A wed field to them was a plowed field, a nmonplace; they never paused to see infinite variety of color. He wondered olks really saw *all* of the beauty of eptedly beautiful things. How many w, for example, that the shadows cast snow at sunset were blue, that the it on a stovepipe was whiter than the dow on a white shirt?

o, in the boy of fifteen, the artist was n. He was constantly feeling and see-what others did not see. And, oh, how wanted to make them see!

have told you of his habit of analysis. this, he had taught himself to ferret the essential elements in a scene which pired a definite emotion, and to discard others. For instance, a sheltered cove ng the lake shore inspired a feeling of tfulness mixed with loneliness. Per-s a summer cottage intruded. He re-ed to see it. He painted *only* the lonely l "restful" elements. He even bor-ved similar elements from related scenes, exed in his memory, and added them. ery detail of his picture conveyed a gle sensation.

such was his painting, and his purpose. s plan was to make people feel as well as , and by his pictures to revive with id definiteness what they had already but vaguely, or indefinitely. He was ng real canvas by now and real colors. He finished school in Painesville. His ther had hope that he might be a nister. The father favored a scholarly eer, as a scientist or a teacher. He was ling to "pinch" that the boy could go to college to this end.

AM going to paint," said Lathrop, quietly but finally. He said nothing a mission, nor a call to what was duty. him, it seemed the question had been tled since the beginning of time.

However, he was a long way from being painter as yet, in his own estimation. e work he had done was nothing more n the material expression of a longing. had done it for the pure love and joy of Surely this was not work. To learn to rk, to learn art, he felt he would have go to school.

Most of us are like Lathrop was in those ly days. He had ideas; he had a plan; had a philosophy that was his own. t because these were his own, he doubted ir value. No school, no "authority"

Many "Brans" Are Only Part Bran

Pillsbury's Health Bran is 100% BRAN

When you want bran be sure you *get* bran

There is a big difference between "real bran" and "part bran."

When your doctor says, "Eat bran," he means a true, 100% bran.

Pillsbury's Health Bran is 100% BRAN—nothing else. The large, coarse flakes are not crushed, or cooked to the crumbling point. That is why Pillsbury's Health Bran is so effective as a laxative.

Because it is unsweetened, uncooked and unadulterated, you can serve Pillsbury's Health Bran in an endless variety of delightful ways. Bran muffins, made from the new recipe on the Pillsbury package, are unusually good. Children like bran sprinkled over sliced fruit or the breakfast cereal. For other delicious suggestions, we will gladly send you, free, our booklet, "50 Prize Winning Recipes for Pillsbury's Health Bran." Write today.

PILLSBURY FLOUR MILLS COMPANY

them to a test, certain they would
laughed to scorn.

SUDDENLY, one night, like a swimm
plunging headlong into the icy wat
he bundled up a few of his sketches a
mailed them to a well-known magazin
He had to fight himself into doing it.

Presently the bundle came back,
heavy as it had gone out. Lathrop's hea
sank. His hands shook as he unfasten
the wrappings. Yes, there were t
sketches. Not one had sold. But
heart leaped into his throat. A letter w
enclosed! It commended the sketche
The art editor had written that the wo
was good!

Excited, scarcely believing his ey
Lathrop regarded the letter. He read
over and over again. And he made
momentous decision. Rewrapping t
sketches he addressed them to anoth
magazine, and enclosed a letter:

"Have you a place on your magazin
staff for a young man who can draw pi
tures such as these, and who is in need
money to attend art school?"

Two more anxious weeks; and this tim
when the reply came the sketches were
returned. The envelope contained a b
few lines, signed by the art editor:

"If you care to take the chance
coming to New York at your own expen
we will give you a trial of one month."

You can imagine the furor that lett
created.

"Go, if you must," said the father. B
he was doubtful of the outcome. "If y
don't make out, we'll still be here on th
farm. Come back."

"I'm going!" said Lathrop; and his ey
burned.

There was no photo-engraving proce
at the time. Magazine illustrations we
drawn by artists and reproduced by mea
of wood block cuts. The work in the Ne
York magazine office was all new to Lath
rop. It was the first time he had bee
away from home.

Six weeks went by, and he was stil
on the pay roll. He was learning to mak

his sketches directly on the wood blocks.

Then the art editor summoned him for a talk, an amazing talk. Several of Lathrop's landscapes were before him, on his desk.

"I like these," said the editor, "but they don't belong in the magazine. We want detail in our pictures. You are giving us simplicity. We can only keep you by insisting upon detail, and I don't want you to do that. I'm afraid it would ruin you."

Lathrop went hot, and then cold. Had he failed?

"You are planning to study art in a school," the editor went on. "Don't do it! You no more belong in an art school of the conventional kind than you belong here. The schools, too, will insist on detail. They will upset the whole method of your work."

"Then where do I belong?" asked Lathrop. The talk was beyond his understanding. He had always thought no one could paint well without schooling.

"That is true," said the editor. "We all must go to school; but there are schools other than those contained within brick walls—and you've found one of them. It is the only school suited to you, because it has already formed your thought and shaped your work. Go back to that school, go back to the farm! Paint as you have been painting. Study as you've always studied. Do that, and some day the world will hear from you."

It wasn't advice easy to take, but Lathrop took it. Back on the farm, he hung away his city clothes, donned his old overalls, and looked out over the vista of lake and fields. So this was his art school! The trees, the crooked fences, the pastures were to be his instructors, the clouds his textbooks! And he loved it!

Surely no artist ever attended an odder school, or pursued a stranger course of instruction, than did Lathrop during the next two years. In winter he taught school in Painesville. In summer he plowed, harrowed, cradled, and did the thousand other tasks a farmhand must do. He analyzed what, years later, were to be the subjects of his brush, with his hands on the bars of a cultivator. He memorized scenes while sweating in a mow of wheat. Not overly strong in physique, the work sent him to bed with aching limbs and frayed nerves. He was no play farmhand, but a man needed and used.

Only in spare hours could he paint, and spare hours were not many. But he had the advantage of being equipped with proper materials brought home with him from New York. By using beeswax and blue vitriol, and later nitric acid, he had learned to etch pictures in steel and copper. He amused himself with these etchings, first on the saws in the workshop; later on copper procured from the local tinker.

AT THE end of two years, growing restless, he returned to New York, taking his homemade etching outfit with him. As soon as a fellow artist saw the outfit he grew enthusiastic and urged Lathrop to etch instead of paint. Etchings were having a run of popularity.

Lathrop listened, and hesitated. He still was handicapped by lack of confidence in the worth of his own work. He still would not believe people would buy it. But so insistent was the friend—even to the point of renting Lathrop a little studio

made to run the *full* race!

ANY horse can make a good start . . . . . But it takes real stamina to *finish!*

So it is with batteries. *Staying* power is the quality to look for—unfailing power over a long period of service. Millions prefer Burgess *Chrome* Batteries for just this reason. They hold up . . . . . They *last.*

See
if you have a "YELLOW MASK"

GAZE closely at your teeth in the mirror. Is the beautiful white enamel veiled by a yellowish hue?

Look again! For of all blights on beauty, slightly yellowish teeth is the most repellent.

Granted that you have brushed and brushed, why has that "yellow mask" remained?

First, because the conventional dentifrices are powerless to remove "Yellow Mask." They slip right over it—you can *feel* them.

Second, there is only one substance that will remove this unsightly yellowness—and that is "Tri-Calcium Phosphate." This is a silky, powdery substance that leading dentists use to clean and polish teeth. It can't harm the softest enamel—but, oh! what a miracle of beauty it works on teeth.

At last dental science has succeeded in composing a tooth paste of this marvelous "Tri-Calcium Phosphate"—a tasty, pleasant one. And all the beauty wonders this substance is capable of are found in this dentifrice's usage.

The name of this dentifrice is ORPHOS TOOTH PASTE. How it makes a tooth gleam! How it reclaims that lost pearly whiteness from the grip of "Yellow Mask." Everywhere it is a sensation. Have you tried it? Get a tube today without fail from your druggist or mail coupon below at once for FREE 20-Time Tube.

and guaranteeing his expenses—that at length he was driven to submit three little etchings to a Fifth Avenue art dealer. He was the most surprised man in New York when the dealer paid him twenty-five dollars each for them, and asked for more.

He did something on a larger scale; but this was rejected by the dealer. Taking the etching farther down the avenue to another dealer, Lathrop sold it immediately for seventy-five dollars. Furthermore, the dealer accompanied him back to the studio to view all of his work and to talk with him. Before this dealer had left Lathrop had an order for all the etchings he could make, at his own price!

Now, watch the man. Money meant nothing to him, except as means to a living. He couldn't attune himself to buying and selling. In consequence, an odd business relationship grew up between him and the dealer. When Lathrop needed funds, he went to the dealer and got them. When the dealer wanted etchings, he came to Lathrop. There was no contract between them, no price.

Seven years this arrangement continued. Not once was there an accounting. Money was never discussed, excepting possibly as it is mentioned between a father and a dependent son. Whether the dealer owed him, or he owed the dealer, Lathrop did not know. I doubt if the dealer himself knew.

Then Lathrop went to England, on funds furnished by the dealer. He wandered over the English countryside, walked miles along the coast, dreamed for hours at a time before a tiny chapel, and got married. He filled his memory with bits of English landscape, with fresh emotions—all raw material for future work.

BACK in New York after an absence of a year, ready to resume his etchings as before, he was thunderstruck to find a complete change in conditions. The whole demand for etchings was of a new character. Commercialism had taken possession of the market, and only cheap work was wanted, to be sold in gross lots. Some men were turning out etchings by the dozens a week. They were "dashing off" things over which Lathrop would have worked months.

"I can't do such work," said Lathrop. "I'll go back to the farm before I'll commit myself to doing less than my best!"

During the entire half-century he has made pictures I do not believe that Lathrop has ever departed from this rule. His poorest work has been the best he could do at the time. No picture of his ever has been painted to meet a price, or a market demand.

He went back to the farm! The place he had won, friends he had made, he gave up rather than compromise his ideals. Unable to sell good etchings, and unwilling to make cheap ones, he returned to a drudgery for which he was utterly unfitted physically, and which he had come to detest.

His grandfather had died and left an adjoining farm to Lathrop's father. Lathrop moved onto this farm and tried to "make it go." He now had a dependent wife and three children, and no money beyond what the farm earned. He was thirty, and no further than he had been ten years ago.

Bitter? No. Heartbroken is a better word for his state; also, he was discouraged. The farm work left him so exhausted that he had no strength left for his art. His crops failed, as he himself seemed to have failed. He still faced his old bugaboo of no confidence in himself, began to feel his big mistake had been in not going to a regular school.

Months of this, and then courage revived. He would try New York again, a final try. "This time," he told his father, "if I fail I'm going to come home for good. I'll know that I'm a farmer, and not an artist."

So low were his finances that he had to borrow fifty-five dollars to augment the few dollars he had, which were only sufficient for railroad fare. That fifty-five dollars represented his future. If he could win before that was gone all would be well. If not, he was beaten. His wife and children had to be left on the farm.

In New York, he rented a little room which was both studio and home. For three months he managed to live on that fifty-five dollars, and in that time he had completed five small water-colors and had almost finished a sixth.

HE LOOKED at his work. It almost sickened him. In it he saw nothing of what he had hoped to put there. The little water-colors seemed to be the most futile things he had done. The unfinished sixth was especially bad, he thought. He debated, should he put the lot in the fire and be done with art, for good?

A friend came in, an old friend of etching days. During the long weeks he had stood by, watching those little water-colors grow. "Bill," he said sternly, "I'm entering those little water-colors in the annual New York Water-Color Show. I'll take the five you have finished with me to-day, and be back for the sixth the day after to-morrow."

"I had no intention of finishing it," Mr. Lathrop told me. "The thing actually seemed hideous. But my friend came back and made me finish it. It was his confidence, not mine, that led to the exhibition of the pictures."

Thirty judges passed on the exhibits—eminent artists and eminent critics. Only one prize was to be awarded, the much sought after W. T. Evans prize. The best landscape artists of America had entered their work in the show. Lathrop had not the courage to attend.

He was alone in his makeshift studio, dully waiting, when his friend burst in. "Guess who won!" his friend demanded, and grabbed Lathrop by the shoulders.

"You?" asked Lathrop, eagerly.

"No—you!" cried the friend. "Your sixth picture won the Evans prize! It's swept the show!"

Lathrop fell back in his chair, stunned, physically and mentally. He was literally paralyzed some moments by the news.

Later, his friend dragged him to the exhibit. There, in the position of honor on the preferred wall, hung his despised sixth water-color. It was not more than twelve by fourteen inches in size. All about it were larger, far more imposing pictures—to Lathrop, pictures that seemed far more worthy of the award than his own.

Five of his six water-colors sold that first day at double the prices Lathrop asked for them. In a few hours' time he had become a figure in art, sought after, surrounded by admirers. He was famous!

Do girls "get away with murder" nowadays?

That's what Pamela said. Who is Pamela? She's nineteen and lovely and spirited — and the heroine of

"The Foolish Virgin"

by Kathleen Norris

ONE of America's most popular novelists tells for you the story of a young girl in sunny California, where they say things happen just a little bit faster than anywhere else . . . A girl with beauty and brains and family, and no fear of what people will say . . . A group of life-loving *nice* girls who dance with the cowboys at "Coffee Bob's", just for the thrill . . . And Pamela Raleigh, of all people, in a car stalled on a lonely dark road at three o'clock in the morning. . .

You'll love Pamela, sympathize with her, fear for her, and yearn to box her pretty ears. In the end you'll find her, as Gregory Chard found her, a girl worth fighting for—even against herself!

This big new serial and seven more as absorbing —brilliant articles, light-hearted short stories —and the service of a dozen departments of proved usefulness—all yours for only *one dollar* a year. Begin now with Mrs. Norris' novel, which starts in the current issue of

Woman's Home Companion

Jobless, he was now tendered a score of jobs. Art schools besought him to teach for them, this farmer who had studied his art behind the plow and who had never seen the inside of an art school. Dealers demanded his work. Private collectors bid for it.

WELL, that's his story. He took a teaching position with a summer art school in the Poconos, in Pennsylvania, near Echo Lake. Later, through a friend, he went to New Hope, Pennsylvania, fell in love with an old farmhouse on the Delaware, bought it and settled there to devote his life to his painting. He was the only artist at New Hope when he came, twenty-six years ago. Not so long ago a half-hundred were located in the vicinity of New Hope, drawn there by the beauty of the place, and by the man.

I have already outlined to you something of what Lathrop has accomplished during these later years. He himself regards the oil painting, "A Winter Evening," in the gallery of the Philadelphia Art Alliance as one of his finest on public exhibition. Many as fine, or finer, are in private collections.

But I want to give you just one more glimpse of the man himself. In our talk I mentioned casually that I had found Lathrop's name and a sketch of his life in at least three famous reference books of American biography. Lathrop listened to me in unfeigned surprise. He had not dreamed that he was mentioned, nor ever bothered to find out.

"The fact that yesterday I may have painted a good picture means nothing," he said. "I am worth no more than the picture I can paint to-day, and to-morrow."

And he turned to the unfinished painting on the easel, of the country road at the day's end, with home just in sight around the bend.

You've Heard of the Average Man? Well, Here He Is!

(*Continued from page 25*)

on him, but not elated. He wasn't dazzled by the thought of seeing his name in print or of being talked about. But his selection by his fellow townsmen involved, he felt, a certain amount of duty to his town and to his state.

"It seems to me," he said, with a quiet smile, "that you are asking me to sit as the representative of a good many people. I couldn't attempt to do that. I can talk only for myself."

And that is exactly what I finally induced him to do—to give me his thoughts, his views, his reactions, and utterly to ignore those of anybody else. Here was a man who, on every point in the specification table, had been adjudged "average," a medley of a little of all of us. I wanted a panorama of *him*.

Roy Lewis Gray was born on a farm near Farmington, which is about twenty-five miles from Fort Madison, on March 12th, 1884, the eldest in a family of four children. His grandmother on his father's side was a Daughter of the Revolution. Both grandparents on his mother's side likewise were born in America.

"Father came to Iowa from Ohio," he said, "and Mother was from Indiana. We are of Irish-English-Scotch descent, but I don't know much about the family tree. I've never bothered to look it up.

"I attended a one-room country school, and later the Farmington high school. My parents insisted that I attend church and Sunday-school but they were not fanatical or extreme in their religious views. Sunday-school was simply a part of the education of every youngster.

"In the same way," he went on, "I send my own boy and girl to Sunday-school. I believe Sunday-school training is good for any youngster. They should know something of the Bible, and the best time for them to learn that is when they are young."

"Do you go along with them to Sunday-school?" I asked.

"No, I don't," he admitted. "Sunday is the only day I have at home. It's the only day I don't have to get up early. That one day of the week I like to get up late, mull over the Sunday papers, smoke my pipe, and—well, just loaf. Maybe I'll tinker a little with the car and, if it's nice, take a drive in the afternoon. That one day I like just to drift along.

"Occasionally we go to church. My wife says that we don't go enough, and she's probably right. It isn't that there's anything wrong with the church that we stay away. But I just want to spend one day in seven at home."

AFTER leaving high school young Gray went to a business college at Des Moines for four months to learn bookkeeping. At nineteen years of age, facing the world, Mr. Gray frankly admitted that he had not an idea in his head of what he wanted to do, or what he really was fitted to do. His first job was taken "blind." A Farmington factory needed a bookkeeper, and he was a bookkeeper in need of a job. The factory happened to make men's clothing. It might have made shoes, or plows.

I mentioned this fact to Mr. Gray. He thought a moment, gazing out over the ranks of men's clothing in the store.

"Yes," he said at length, "chance put me into this business. As you say, it might have been shoes, or plows. I spent three or four years in that clothing factory. From keeping books I got into the selling end. I was sent out on the road to sell to retail stores. A stranger in a strange city, living at hotels, riding slow trains, I envied the men with whom I did business. It seemed pretty nice to own your own store, to go home for your meals, and to sleep in your own bed nights.

"In the panic of 1907 the Farmington factory failed. I had to get another job, and naturally I went to another clothing factory, this time in Louisville, Kentucky. I traveled south and east through the Blue Ridge territory, to Alabama on the one end, Maryland on the other. All the time I kept saving my money. My dream was for my own little business."

Digitized by Google
Original from STATE UNIVERSITY SYSTEM OF FLORIDA

Our "average man" never dreamed of ing to the presidency of the company of acquiring fame and wealth!

"I've never wanted a lot of money," continued. "I've never envied any mous man. I like to read about them, d I admire them. But I know these g men have something that I haven't t, and never will have. As you say, I'm erage.

"As to money: a lot of money wouldn't ake me any happier. I wouldn't know w to spend or how to manage it. The uff would worry me. I want enough oney to live comfortably right here here I am, to pay my bills when they me due, to send my children to school, d to insure the happiness of my family. want a few luxuries, such as a car and a dio, but I've never hankered to own the iest car, nor the biggest house, nor e most expensive radio. I'm perfectly ppy living as most other folks live."

"And you prefer the small town?"

"I prefer the kind of town in which I re, neither too small nor too big. You iow, we folks here in Fort Madison don't ink of it as a 'small town,' but as a iall city. We are large enough to enjoy ch modern things as electric lights, gas, ell-equipped stores, a street-car line, veral good theatres, paved streets, and modern sewage system. The city could t give us more. We know our neighrs, and they know us. I can walk down r main street, and in five minutes meet dozen or more friends. I know almost erybody in town, and 'most everybody iows me. In a big city I would be a rtual stranger, and maybe not know the an living next door. As it is, when I int to go to the city the railroad will ke me there in a few hours; but the best rt of the trip is coming back.

"My children are free, with good air breathe and real dirt under their feet. ie country begins only a block back of ir house. They attend a fine school, as od as any big city school. It doesn't st us a third as much to live here as it ould in Chicago or New York; and here am somebody, there I'd be nobody."

The Average Man has not stood still. ich year, through industry and planng, he has made himself a little better f than he was in the previous year. He is gone ahead. He has kept abreast of e times.

IT WAS in 1913, at the age of twenty-nine, that he quit the "road" to enter inpartnership with a Farmington friend the retail clothing business. The partner tablished a store in Farmington and r. Gray opened his in Fort Madison. ater, the partner's brother was admitted the firm, and a third store, under his anagement, was opened in a third town. o-day the three partners own four stores. hired manager conducts the extra place. hey buy from a manufacturer who ilors men's clothing to order on a coöperive basis for independent retailers, and ius enjoy in effect and in name the dvantages of being members of a chain fifty or more stores, centrally adversed. Yet they are independent, and own ieir own stores. The Average Man beeves in coöperative effort and modern ethods.

He married in 1914, when he was sure e could afford to marry and have a home. His bride, Etna Barton, was a Farmington girl whom he had known almost all his life. To help pay for their home—a brick "double" house with a porch—they rented a room or two they did not need. Mrs. Gray does her own housework, cares for their two children—Dick, nine, and Sue, age four; and it is she who does most of the buying for the home. She is the home manager undisputed; and he the manager of the store undisputed.

"WHAT," I asked Mr. Gray, "is your chief interest?"

"My home," he replied. "Next to that, my business. In fact, as my home is dependent on my business, the two are practically one interest. Outside of those two, my main interest is in good roads.

"Hard roads," he went on, "concrete roads. I believe the State should build them and maintain them. Good roads help the farmer to market his products. They help the merchant by bringing the farmer into town to buy. They help everybody, for when the roads are good folks get around more, and so get acquainted with other sections and their problems. A man who'll go only one hundred and fifty miles from home over poor roads will drive two hundred and fifty over good roads.

"There is a lot in the newspapers about foreign affairs. Maybe I should be more interested in these things than I am. But they don't touch me so closely as some other problems nearer home. I try to keep informed on these big questions, but I don't get excited over them. I reason that we've sent folks to Washington to attend to these matters for us.

"Of course, I don't always agree with what the folks who run the Government do. Sometimes I think I could do better, though I don't suppose I would. But I always give them credit for trying to do their best.

"It's easy to say we have too many laws, but each law at the time it was passed was thought to be a good thing. If we have too many laws it has been because we've wanted too much. Now that we see our past mistakes, it might be a good thing to condense some of our laws, cut out those that duplicate, and reconsider some others. One trouble with our lawmakers is that they don't like to admit they make mistakes.

"Take prohibition. You hear a lot of talk about that, and read a lot about it. Personally, I'm not a drinking man, so I'm not directly concerned. But from what I hear and read, one side seems to have statistics against, and the other side statistics in favor of it. I don't know which to believe. Right this minute I wouldn't know how to vote intelligently and fairly on prohibition. As a matter of fact, I'm a little suspicious of what either side says, because both are biased.

"On one thing, however, I am certain. Never would I want the old saloon back. It was bad and deserved to go. But probably the bootlegger is worse, so there you are. How can a man make up his mind fairly?

"In national politics," continued Mr. Gray, "I am pretty much a party man. In local politics, I'm independent. Probably the reason for this is that I have no way of knowing national candidates as I know local candidates. I have to depend

on the newspapers for my national information. And, naturally, they are partisan. Therefore, the best I can do is to stick to the party which most appeals to me and trust it to pick the best man available.

"WHAT do I read? I take our local newspaper and a Chicago newspaper, and at home we always have on hand copies of several current magazines. I read the local paper more thoroughly than I do the Chicago paper, and my wife reads both more thoroughly than I do. If the President or the governor makes a speech I read 'most all of it. That is a rule with me; I try to read these addresses, because I feel that I should.

"Taking the newspaper as a whole, what I read depends a great deal on the headlines. I look them all over, and if one interests me I read some or all of the story. A new invention, a great disaster, some very unusual crime, these will interest me in the main; but I seldom read eight or ten columns of the same thing.

"The evolution trial in Tennessee struck me as being funny and a lot of noise over nothing. If men want to believe in evolution, let them. If they want to believe in something else, that's all right too. Personally, I'm not interested in such questions. The religion I was taught as a boy and young man has always seemed to be a pretty good religion, and I stick to it. I don't question it. Don't ask me about 'modernism and fundamentalism,' for I know nothing about them.

"When I open a magazine I turn first of all to the advertisements. I find a surprising amount of interesting information in them. They give you the latest developments in automobiles, radio, household appliances, building, roads, clothes. When a manufacturer discovers something new, the first thing he does is to advertise it, publish pictures to show what it looks like, and describe its uses.

"After I'm through with the advertising, I'll glance over the stories and articles in the magazine. But I'll read only those that seem interesting, preferably the articles. I'm not much on love stories, and I have no use at all for this sex stuff. I'd rather read facts. I don't believe I've read an article over twice in my life.

"There's only one complaint I have to offer about some of the advertising. It doesn't tell you how much the article costs. Now, that is one of the first things I want to know. When no price is given, you get the impression that the article must be pretty expensive. Maybe it isn't, but you get that impression. And it tends to make you drop it from your mind. On the other hand, when you know the price, even though it seems a little high, you can weigh the figure over and maybe come to the conclusion that it isn't so high after all. I wish advertisements wouldn't keep prices a secret.

"I'm not much on books. I haven't time for them. I open my store at eight o'clock in the morning and close at five-thirty, except on Saturday, when I keep open until nine or nine-thirty. I find there are always a lot of little jobs to be done at home. When I'm through with these, I look over the papers or maybe a magazine, play with the kids a while, talk a little, listen to the radio, and, before I know it, it's time for bed.

Digitized by Google
Original from STATE UNIVERSITY SYSTEM OF FLORIDA

"Occasionally we go to the movies, if ey look good. And we take the children ɔng, though Sue is still too small to ıderstand them. Dick likes the 'West-ns' and plenty of action. He doesn't ink much of these long-drawn-out love enes.

"In general, I have no kick to make on e movies. The majority of the pictures e clean, according to my notion, and a eat many of them are good. If a picture ıs a bad reputation, we simply don't go see it.

"As to radio programs, what I like best high-grade popular music—not classical ıd not jazz. However, I prefer classical jazz, though a lively tune sounds good ɔw and then. But for steady diet, give e popular music that is of a high grade.

"When I first got the radio, I sat up ghts trying to get distant places. But I ɔt over that long ago. Now I tune in on ıe stations that I know have good pro-ams and stick to them. I don't 'fish ɔund.' I listen in on really important ɔeeches, and if the speech isn't good I mply tune it out."

MR. GRAY believes that the country is growing better, and not worse. Men re about the same as ever, he finds, and uman nature hasn't changed, either. ut we are more enlightened, live better, wn better homes, reside in more sanitary ɔmmunities, and take better care of our ealth. The "flapper" is the same girl nder her bobbed hair as her grandmother as, and the "sheik" is no wit worse than is granddaddy. Crime? Look back, ays Mr. Gray. Crime followed in the rake of every war since Time began. He n't worried over the country; it isn't oing to the dogs!

Should women vote?

"Yes," was his answer. "My wife otes, and it has not made her any less a oman, wife, or mother. If anything, she s a better-informed woman. She is more nterested in what is going on in the ountry than I am and reads more than do."

Is he going to send his children to ollege?

"That depends on the children them-elves," said Mr. Gray. "If they show a lesire for college and some ability that eads me to believe they will be benefited ɔy it, I'll try to send them to college. I vant to do the best I can for them accord-ng to their desires and talents. I'm not oing to attempt to make my children row to suit my notions, but to suit their natural bent, whatever it is."

Mr. Gray belongs to his Chamber of Commerce, the Elks, the Odd Fellows, nd the Rotary Club. Once in a while he ttends a lodge meeting, but not regu-arly. He joined these organizations be-cause he felt they were factors for good in is town and therefore deserved his support.

To sum up the Average Man!

He is a home man, and next to his home stands his business. He is modestly am-bitious, and modestly optimistic. To the best of his ability, he tries to do what is right. He is a little of all of us—and much of some of us. A dependable man! A steady, sane, conservative man!

I wonder, how much of *you* do you see in his picture?

✣ ✣ ✣ ✣ ✣

An Advertisement of the American Telephone and Telegraph Company

No ONE person owns as much as 1% of the capital stock of the American Telephone and Telegraph Company.

The company is owned by more than 420,000 people, with stockholders in every section of the United States. It, in turn, owns 91% of the common stock of the operating companies of the Bell System which give telephone service in every state in the Union, making a national service nationally owned.

The men and women owners of the American Telephone and Telegraph Company are the largest single body of stockholders in the world and they represent every vital activity in the nation's life, from laborer and unskilled worker to wealthy and influential executive. Although the telephone was one of the greatest inventions of an age of large fortunes, no one ever made a great fortune from it—in fact, there are not any "telephone fortunes." The Bell Telephone System is owned by the American people. It is operated in the interest of the telephone users.

"The Ninth Life"

(*Continued from page 13*)

zero the city editor of the Brooklyn "Eagle" gave him an assignment, and the promise of fifty cents plus expenses. The assignment concerned the Convention of United Club Women, which Francis, unfamiliar with Brooklyn and lost in that peculiar haze familiar to people who go regularly without breakfast, never even found. And the city editor swore horribly.

It was clearly no time to talk about expenses. Fortunately, he had five cents left for the subway.

Slumped in his corner, Francis realized that it was very doubtful whether he would ever stand up again. He felt sorry for the conductor, who would have a tiresome job getting rid of him. He foresaw that he was going to be a disgusting nuisance. He would have apologized in advance if he could have found anyone definite to apologize to. But everything was extraordinarily vague. He was not really surprised when he found himself standing, hat in hand, on Mrs. Gottlieb's stairs, and talking to the unknown girl on the fourth. Actually talking to her—as he had intended—with a courteous dignity.

He said, "Excuse me. I wonder if I might speak to you for a moment."

And she, looking down at him from an upper step, smiled gently and encouragingly.

"Of course. Why not? We're neighbors. And neighbors ought to be neighborly, oughtn't they?"

"That's just how I felt about it. Otherwise, of course, I wouldn't have had the cheek—"

"There's a soda fountain just across the way," she suggested. "I'd love an ice cream. And we could talk so much better."

FRANCIS knew the soda fountain by sight. And, of course, it was just the sort of thing an American girl would say. But it embarrassed him terribly. For her own sake, he didn't want her to know the truth. He felt that his absurd inability to provide her with ice cream would weaken her confidence in him.

He said firmly:

"I never touch ice—if I can help it. I have a strong—you might say unreasonable—antipathy to the stuff. Owing, no doubt to having been blown up by a German shell."

"Oh my, were you in the war—really?"

"Quite really."

"How wonderful of you!"

She had flushed charmingly with admiration. He made a careless gesture:

"Not at all. Don't mention it."

"But it must have hurt dreadfully—being blown up, I mean."

"I should prefer to say that it disturbs one's point of view. Permanently. And it did hurt—afterward. But nothing like as badly as having your heart broken."

"Did they break your heart too?

"Oh no. Elsie did that."

"Who was Elsie?"

"A girl. We were engaged. But she liked Richard better. It was quite natural. You see, not having been blown up, he was doing quite nicely in the retail soap business. That makes a difference."

Are you cleaning *all* your teeth every time you brush them?

HERE is a brush that reaches *every* part of *every* tooth. Your teeth curve with your jaw. The bristles of this brush curve the same way. The handle curves too. Thus you may brush back teeth without stretching your mouth out of shape. And the famous end tuft makes this cleaning process doubly thorough—doubly sure.

You cannot begin too soon cleaning the teeth you have heretofore neglected. Go to your druggist now. Ask for a Pro-phy-lac-tic. Begin at once to gain the benefits of a brush that reaches *every* tooth.

Don't try to use your Pro-phy-lac-tic too long. Because of the high quality of the bristles in Pro-phy-lac-tic brushes, they never seem to wear out. But the elasticity, the springiness, of the bristle which is so important for effective cleansing, may be lessened. Try a new Pro-phy-lac-tic Brush and compare its "feel" with the old one. With twice-a-day brushing, you will need a new Pro-phy-lac-tic about every three months.

Sold in three sizes by all dealers in the United States, Canada, and all over the world. Prices in the United States and Canada are: Pro-phy-lac-tic Adult, 50c; Pro-phy-lac-tic Small, 40c; Pro-phy-lac-tic Baby, 25c. Made in three different bristle textures—hard, medium, soft—and with white handles or colored transparent handles—red, green, or orange. The Pro-phy-lac-tic with four rows of bristles is made for those who prefer a larger bristle surface. Price 60 cents. Always sold in the yellow box. Pro-phy-lac-tic Brush Company, Florence, Mass.

FREE—*an interesting booklet containing valuable information on care of the teeth*

She said with a sweet severity, "Not to a nice girl."

Francis brushed this subject aside too.

"I didn't mean to talk about that at all. If you hadn't mentioned ice cream it would never have occurred to me. It's you I wanted to talk about."

"Me?"

She was properly but not indignantly embarrassed.

"You see," he explained, "I'm a man. A man of the world. I know things that you couldn't know—mustn't know. It's not that I want to interfere. Please believe that."

"I do indeed."

"And, of course, I don't know the circumstances. I don't want to. But I've got two sisters at home—perfect dears. What I mean is . . . this place isn't the kind of place for you."

"I know it isn't. It isn't really a place for anyone, is it? Not even for poor Mrs. Gottlieb. Only—some of us can't help ourselves!"

IT WAS just what he'd expected her to say. Their eyes met, and his heart grew big with a pity that somehow included everyone—even George and the young good-for-nothing on the third and the peroxide blonde. And he was terribly proud that she trusted him.

"That's true. But you're different. There must be somebody—your people. . . ."

"I ran away from them, months ago," she told him sadly.

"Was it—forgive me, but you're so awfully young to run away."

"I couldn't help it. There wasn't any choice. I didn't approve of them."

He felt himself blush again. He saw that he had blundered brutally upon her secret. He wished Mrs. Gottlieb's house didn't rattle and shake so. He had to hold on to the banisters to prevent himself from falling downstairs.

"How plucky of you!" he said.

"I'm not plucky; I'm really awfully frightened."

"You needn't be, so long as I'm here."

"And you'll always be there, won't you?"

"I'll try. But one can't tell. I got lost in Brooklyn this afternoon. . . . And if I never came back—"

"Oh, please take care of yourself. You see, I need you so!"

Mrs. Gottlieb's house gave a final lurch. A hand laid itself gently on his shoulder. A face looked closely into his.

It was the conductor.

"Times Square. You gotter get out," he grumbled.

"Of course I have," he said. "She needs me."

The conductor dug him playfully in the ribs.

"Say, young feller, where did yer get the stuff?"

Francis stood up. He stood amazingly straight. So it had all been a sort of delirious dream! He walked out with dignity.

He even walked up Mrs. Gottlieb's stairs. And when he passed the unknown girl on the fourth floor—it was odd how she seemed to be always going down just as he was coming up—he said "How d'you do?" quite as though nothing had happened. And though she looked at

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

him very earnestly, he suspected that she at any rate didn't know that anything *had* happened. She didn't know that her simple faith in him had saved him from living permanently in Times Square subway.

Some time afterward, he was not sure whether it was months later or just a few minutes, Mrs. Gottlieb picked him up on his own landing. She was a strong woman smelling vigorously of garlic, and once on his feet Francis found it possible not only to back away from her but to stand unaided.

He protested seriously:

"You know you shouldn't always be after me like this. I have paid—right up to next Tuesday. And I shall continue to go on paying. Circumstances beyond my control compel me to make your house my home indefinitely. In fact, for just so long as the young lady is under my protection."

"See here," said Mrs. Gottlieb, "vat goot does it do me ven you pay ze rent and I haf to pay ze funeral? Miss Dawson—she say to me joost now—that young man don't haf enough eats. She say to me, 'You tell him not to be so proud. Tell him to haf a leetle talk with me'!"

Francis drew himself up. But he was glad to know her name.

"I shouldn't dream of worrying Miss Dawson with my private anxieties," he said. "She has enough of her own."

"She? She don't haf no anxieties. Her pa bosses ze biggest packing business in ze country. She says her pa'd gif you a job any time you ask."

Someone had slapped him in the face. The sheer pain of it cleared his vision. He said roughly:

"You don't know what you're talking about. A rich girl doesn't live in a house like this!"

Mrs. Gottlieb snorted.

"You don't know vat ze girls do these days. And she don't lif here, not always. She vork on ze Settlement. She just come here see how folks like me and you live."

"I see," said Francis after a pause. "Specimens." He managed with a frightful effort to stop himself laughing. For he was quite sure that he would never make Mrs. Gottlieb understand how funny the whole thing was. "In that case, Mrs. Gottlieb," he said, "I shall be moving out to-morrow. As a specimen, I'd be a complete failure."

"You're crazy," said Mrs. Gottlieb.

"Quite," said Francis.

He just managed to close the door and turn the key in time.

SHE was a waif of the city streets, and could never have told what led her to him. Perhaps it was that intuition for which her sex is deservedly famous. Perhaps it was merely the fact that his open window lay within easy reach of the roof gutter which represented the last stage of her distracted wanderings. Things had been going so badly with her that she might well have been justified in deliberately missing her aim and making an end to a completely unfortunate career. But there again she was governed by a power greater than hunger. She gathered herself together, sprang, scrambled for one breathless, terrible second, and came to rest in relative safety on the window ledge.

What she saw could not have offered

Chew DENTYNE *.. and smile!*

The men who land the big orders are famous for their cheery smiles. There's nothing like a smile to win your way into the hearts of men. Teeth play a big part. They must be clean and pearly white. Dentyne is a delicious gum that makes smiles more attractive. It keeps teeth snowy white.

much consolation. Unless, of course, it is consoling to realize that sorrow is a universal heritage. She saw a mean, narrow room almost completely filled by a mean, narrow bed on which a man lay crumpled—face downward and crying with that racking bitterness which is without tears. She knew the sound. And, oddly enough, she was always disturbed by it. She made a faint moaning sound, and with her last strength dropped to the floor.

Francis heard her. The "plop" of her soft body was so unexpected that he sprang upright—shivering with nerves and weakness.

She had no hope. She knew all about the creatures called men. Probably he would swear and throw something at her. But it was too late. She dragged herself toward him and within a few feet lay down, stretching herself out with the mute dignity of resignation. He could do his worst. She had dodged for the last time.

Francis called to her. His voice was thick and unsteady. The drunken men who lurched along the pavements at night had voices like that. She heard him get up. She waited for the crushing impact of his merciless boot against her aching ribs. Instead, he bent over her. She felt his hand on her head, and opened her eyes wide in sheer astonishment. It was the first time that anyone had touched her with that gentleness. But she couldn't answer him. Even if she had had the strength, she wouldn't have known how. There had never been any reason to say "Thank you." No one had ever taught her.

Still, she had a certain charm about her, something friendly and honest in the eyes, an intelligence in the round forehead and small, well-set ears. Francis, who had discernment, saw it. And he saw something more—a misery that was like a pathetic travesty of his own.

"Why, you poor thing," he murmured. "You're up against it too!"

FOR several minutes he knelt there, gently consoling her. He didn't know what to do. His head seemed to be entirely detached from his body and floating aimlessly on a sea of weakness. As far as he himself was concerned, everything was settled. To-morrow he would clear out. From Brooklyn Bridge probably. He was through with ice and assignments and editors and rich girls who played at poverty for the fun of the thing. But all that was to-morrow. This was now. And now something had to be done. A small signal of distress had gone up on his horizon. He couldn't ignore it. No one could. The minute you saw it, you had to be up and doing, even if you yourself were at your last gasp, and even if it was your private conviction that nothing in life mattered. It was in the blood.

And besides, her coming to him—who was as lonely and battered as she was—touched him. He felt gentle and chivalrous again.

"Do something!" his will insisted.

He searched his pockets. Nothing. He searched for some possible source of help. What he found brought the blood to the roots of his fair hair. He couldn't. He would rather die. But then, his death wasn't in question. . . . He was going to die anyway. To-morrow.

Slowly and painfully he dragged himself up. He lifted her in his arms and laid her gently on the softest part of the unyielding bed.

"You wait!" he whispered to her. "I'll be back soon."

He went out onto the landing. An unusual silence brooded over the melancholy stairs. There was no sound but his own heavy, dragging footsteps and his reluctant knock.

THE door opened immediately. The light from the neat, cheerful room blinded him so that he could not read the expression. He didn't want to. He didn't want to see her at all. He said with glacial courtesy:

"I'm sorry to disturb you."

"Why, Mr. Clairvaulx, I'm delighted. Won't you come in?"

So she knew his name. Of course. Specimens are always labeled. He made her a slight ironic bow.

"Thanks. You're very kind. I only wanted to know whether I could borrow some milk from you?"

"Milk? Why, surely. I have a bottle right here."

"It's not for myself," he explained. "A stray cat has just jumped in at my window. The poor brute is evidently starving."

Her voice darkened a little.

"That's too bad! Wait a minute! There—the bottle isn't even opened. Aren't people cruel!"

"They're always beastly to cats," he said. "Thanks awfully. I'll—I'll bring the bottle—and—and the money to-morrow—"

"That's not very gracious of you, is it? Surely I can do my bit."

"Well—she came to me. I'm responsible. Thanks very much, all the same."

She did not move. Her attitude of waiting made it difficult for him to go.

"Mr. Clairvaulx, please, we're neighbors; we're fellow-creatures too. Isn't there anything else that I could do?"

He answered with an extreme brightness:

"Nothing, nothing at all, thanks. Milk is what she wants. All cats like milk."

"And are all English people so stiff-necked?" she wanted to know.

"Most of us," he admitted. "We don't mean to be. We just are. Nothing to be done about it. But thanks awfully, just the same."

By the time he got back she was almost gone. He had to feed her with his finger-tip, drop by drop. At first it seemed a losing battle. He felt his own strength wane with hers, and drank a little of the thick creamy liquid to keep himself from fainting.

It was a surrender, shameful enough—but justified. This was no time for pride or self-consideration of any sort. This apparently meaningless little life had crawled to him for safety. It was a fight, a challenge. And for some obscure reason he was out to win.

It grew dark. A light springing up at a neighboring window reflected itself on the opposite wall and back into the mean room, filling it with a faint, unearthly brightness. The hours passed. He did not know how many. Flutteringly life stirred and flowed back under his patiently soothing hand. As she lifted her

head, and lapped feebly from the soap dish that he held ready for her, he was filled with an irrational triumph. His heart melted. He lay down beside her, holding her close to the warmth of his own starving body.

And then—very uncertainly, rumblingly, like a small engine that has been mishandled and is misfiring badly, she began to purr. She nestled into the hollow of his arm. She rubbed her soft cheek against his. And Francis Clairvaulx cried again, but this time like a child, freely, with tears that wetted her poor fur coat.

And presently they fell asleep together.

He dreamed strange and uneasy dreams. He dreamed that something dark and warm and very close to him was going through some nameless, terrific struggle. There was an earthquake. The ground heaved under their feet. Ancient forces were at work, tearing and rending at the very heart of creation. Then out of the tumult, from the far distance, small voices became audible, wailing plaintively, to sink at last into a thick, smothering silence. As though at a signal, the tormented earth grew quiet. It no longer threatened. Under its warm breast life began to beat with a strong and steady rhythm. Dawn broke. The unknown struggle was over. The whole world had resolved its discords into a sweet song of beatitude.

Francis opened his eyes. The result was disappointing. Whatever light ever came through the dirty window revealed no change, no miracle. There was the same stain on the wall, the same broken blind, the same chipped water jug, the same Francis. If he could only go to sleep again, and never wake up.

Then he saw her. . . .

SHE had made a nest for herself between the pillow and the blanket, and she was looking at him. Her green eyes blinked. He had never seen eyes so full of lofty wisdom and serenity. And he could have sworn she smiled at him, graciously, and rather pityingly because there were things in life that he could never know.

Then, as though to reveal the marvel that had come into both their lives, she crooned once and turned over comfortably and invitingly on her side.

And he saw that she was not alone.

Obviously, Brooklyn Bridge had to be indefinitely postponed.

At least it was obvious to Francis.

It might not have been so obvious to Mrs. Gottlieb. Mrs. Gottlieb, if put in possession of the whole case, might have argued that a young man who was determined to drown himself, but persisted in preserving the lives of a stray tabby and two unpromising offspring wasn't right in the head. And she would never have lent him the fifty cents which, incredibly, she did lend him. As she explained to herself afterward, there was something about him that morning which fairly knocked her off her feet—something resolute and ruthless.

Francis turned the key of his door and went to eat a hearty breakfast prior to interviewing the manager of the Manhattan Ice Company, who was not in the least glad to see him.

"Aren't you," he inquired coldly, "the guy I fired three weeks ago?"

Become an Expert Accountant
The profession that pays big incomes
The demand for skilled accountants—*men who really know their business*—is unceasing. Big corporations are in constant need of expert counsel in matters relating to Auditing, Cost Accounting, Business Law, Organization, Management, Finance. Men who prove their qualifications in this important branch of business are rapidly promoted to responsible executive positions—given an opportunity to earn real salaries. The range is from $3,000 to $15,000 a year—even to higher income-figures.

Train at Home
Under the LaSalle Problem Method
Why let the other fellow walk away with the better job, when right in your own home you can equip yourself for a splendid future in this profitable profession?
Under the LaSalle Problem Method you can acquire a thoro understanding of Higher Accountancy, master its fundamental principles, become expert in the practical application of those principles—this without losing an hour from work or a dollar of pay.
Your training will be under the direct supervision of William B. Castenholz, A. M., C. P. A., former comptroller and instructor, University of Illinois, member of American Institute of Accountants, and a director of the National Association of Cost Accountants. He is assisted by a staff of legal, organization and management specialists, business efficiency engineers and Certified Public Accountants.
Preliminary knowledge of bookkeeping is unnecessary. Our free book on accountancy fully explains how we train you from the ground up, according to your individual needs. Low cost; easy terms.
If you are dissatisfied with your present equipment, the coupon just below this text will bring you an inspiring story—"Ten Years' Promotion in One"—of how one man, thru study at home, cleared the path to success; also the true facts about present-day opportunities in Accounting, all without obligation.
The man in earnest to get ahead will find this coupon his most profitable aid to progress.
——*Find Yourself Thru LaSalle!*——
LASALLE EXTENSION UNIVERSITY
The World's Largest Business Training Institution

How Does Your English Impress Others?

You are sized up every day by the words you use, how you use them, your spelling, grammar, pronunciation.

Others think you are lacking in culture if you say "between you and I" instead of "between you and me;" if you use "who" for "whom" and "shall" for "will;" if you say "hosPITable" when you mean "HOSpitable," or if you make similar mistakes. Fairly or unfairly, you are judged by your English.

At last there is a way to improve your English quickly and surely. Sherwin Cody has perfected a remarkable device, which will quickly find and correct the mistakes you unconsciously make.

Already over 50,000 individuals in every walk of life have used this invention. It is so remarkably successful, because it concentrates on the formation of correct habits. There is no hard study. Only fifteen minutes a day is required, over a short period, and the instruction is guaranteed to improve your English to your satisfaction, or it costs you nothing.

Free Book on English

A new book, "How to Speak and Write Masterly English," explains Mr. Cody's surprisingly easy method. Get a copy free and learn how to stop making embarrassing errors. Merely mail the coupon or a postal card. SHERWIN CODY SCHOOL OF ENGLISH, 911 Searle Building, Rochester, N. Y.

Makes a business or personal stationery you will be delighted to use. Ideal for professional men. Just send $2.00 (west of Denver and outside U. S., $2.20) and this generous supply of stationery will come by return mail, postage prepaid. Securely packed in a sturdy blue box. Please write or print clearly. Prompt service and satisfaction guaranteed or money refunded.

National Stationery Co., 1128 Lincoln Highway, Batavia, Illinois

"I am," Francis admitted.

"Say—you've got nerve coming 'round here worrying me—"

"I've got more than nerve," Francis interrupted. "I've got a mother and two newborn children dependent on me. If I don't get work, they'll starve. That's why you're going to give me another chance."

The manager scratched his head.

"Well"—he said—"what a guy like you is doing with a wife and kids, and twins at that, beats me. But maybe they'll make a better man of you. Go to it—and if you break up another ice chest, heaven help you!"

Francis went to it. Perhaps it was the square breakfast. More probably it was the thought of those three waiting for him and trusting him. The ice wasn't so heavy. His wound didn't ache so much. And he broke nothing but a record quick-delivery.

"It sure is a wonderful thing," the manager commented to his wife that night, "what a family will do for a man!"

Francis bought sausage and two pint bottles of milk at the nearest delicatessen. For the first time since his heart had broken, he was hungry. But he had the self-control to deposit one bottle of milk and a note, "With thanks and compliments," outside Miss Dawson's door.

After which gesture his pride felt better.

BUT there are other elements besides pride in a man's composition. And he had been sorely tempted. It would have been so natural to have knocked at the door and thanked her personally. He could have told her about the grave responsibility that had been thrust upon him, and asked her advice. He had to remind himself that she was a rich man's daughter to whom he was only an interesting social phenomenon, to persuade himself to go down-stairs.

He wondered whether his room would be empty—whether she too had found him unworthy, and left him. But she had not. She rose up from the old woolen sweater which he had given her, and came to greet him. Thin and feeble as she still was—gaunt-featured with motherhood and ill-usage—there was grace in her mincing step, and something processional in the stately sway of the emaciated tail. She curved in and out between his legs.

Then she showed them to him. She let him hold them, blinking up at him with a proud confidence. Certainly she had worked hard, and they were better than they had been. After supper, with a soap dish of milk he performed a solemn ceremony of baptism, and Jenny, so called for no reason at all, and Bimbo and Kiki—nice absurd names with no embarrassing emphasis on sex—were ushered as full-fledged members into respectable Christian Society.

And Jenny, who had never had a name or been respectable, circled 'round the three of them and sang a purr-song that had become incredibly thick and unctuous.

Nursing mothers are proverbially hungry. And Bimbo and Kiki, with nine lives apiece, made corresponding demands. So that Francis carried ice by day, and at night under the gas jet went back to his old job of writing stories.

On the ninth day, when Bimbo and Kiki opened vague blue eyes upon their universe, Francis finished a little thumb-nail sketch of their birth. And the next day—after ice hours—he obtained an interview with an editor by means of the entirely false statement that he had one, and sold him the story out of hand. The editor tried to be indignant, but Francis was firm, friendly, and unconsciously rather likable.

"And I can do better than that," he said. "When I'm at my best, it takes a lot to beat me. And of course I want you to understand that this isn't going to be my regular price. I'm just starting."

That night they all had Scotch kippers—cooked over canned heat—and ice cream from the drug store. Jenny was an American, but Scotch kipper soars above nationality. It has what editors call universal human appeal. And Jenny did not leave even a tail.

From thence onward Francis remembered what he had known before his heart broke; namely, that he was to be a great writer. Brooklyn Bridge faded into the distance. He began to think of Elsie with a cold detachment, and thought that one day, when he went back to Kilty-in-the-Dale, she would be very sorry for what she had done. Much sorrier than he had ever been.

He wished the girl on the fourth would be sorry too. (Her name, he discovered casually, was Sylvia and suited her.) But he was sure she wasn't. Her nod, when they passed each other on the stairs, was glacial. Not, he thought, with an odd sense of satisfaction, indifferent. Just glacial.

Probably she had considered him churlish and ungracious about the milk, and once he had been tempted to explain—first, that it isn't easy to be English and expansive, and much less easy to be hungry, and polite to rich ladies who are making a study of your symptoms. And that, oddly enough, the situation is made worse, if the rich lady happens to be young and beautiful.

But he didn't. . . .

IT WAS summer now. Through the open window came an unpleasing mixture of moist heat, garlic, and the molten roar of the Elevated. Francis and Jenny would sit together on the window-ledge, looking at the blank wall and dreaming dreams. Francis dreamed of trees and meadows, and what Jenny dreamed of no one knew. Perhaps it was just as well. She had become sleek and almost beautiful, and the expression of her green eyes was distinctly enigmatic. And it was quite obvious that Bimbo and Kiki needed wider fields for their activity.

"We might just as well clear out, Jenny," Francis said. "There's no reason why we shouldn't. We sold another story yesterday. We're almost fabulously rich. Why don't we?"

Jenny's silence proclaimed that she knew more than she cared to say.

Miss Dawson didn't go, either. Francis couldn't help noticing that she was growing pale and heavy-eyed. He began to worry again. He even had faint twinges of remorse. Perhaps she really did care for people, and was sorry and wanted to help. It wasn't her fault that her father had made money. Really, she had behaved rather well, much better than he had. He felt he ought to tell her to go home, that it didn't do anybody any good

if she got ill, that it would only worry people.

But it was she who spoke.

She said, turning back casually at the corner of the stairs:

"Oh, Mr. Clairvaulx, I think I'd better warn you. Mrs. Gottlieb's going to make trouble. She's found out—about them."

"Them?"

He caught the shadow of a smile.

"I'm afraid I don't know their names."

"If you mean Bimbo and Kiki—"

"I guess I do."

He came down a step.

"How did she find out? I didn't know she ever went near my room."

"She doesn't, ordinarily. But she heard. She said she thought it was rats. And—and then she began to notice things—one does, you know, even in this house."

Francis looked rueful.

"I know. They're so young. They do their best. But you can't expect them to understand all at once. This isn't really the right place for them."

"Or for anyone," she murmured. "Wouldn't it be better to give them to someone who could take care of them?"

"No," he answered shortly and rather rudely, "it wouldn't."

"Well; I've told you. You see, I'm going away to-morrow—home, to my people."

"How nice!" said Francis, with elaborate pleasantness. "Then we shall be all moving together. Hard luck on Mrs. Gottlieb."

She shook her head.

"She wouldn't mind. They're plenty more like us."

"Like me, you mean."

"Mr. Clairvaulx, listen, won't you?"

"I was moving anyway," he explained hastily. "I'm a writer, you know. I've only been here to get atmosphere—for a book. I'm going to Long Island. I hear it's charming."

"I—I didn't know you were a writer," she said, rather forlornly.

He laughed.

"Lots of people don't."

"Well; I'll look out for the book."

"It won't be worth looking for."

"I'm sure it will."

There was a silence.

"Good-by then, Mr. Clairvaulx—and good luck."

"Good-by. And thank you."

So that was that.

FRANCIS walked the streets aimlessly with a moist parcel of fish clasped tightly under one arm. He noticed the results as little as man who had fallen through a hole in the world would notice such trifles. He felt just like that, like a man who would never reach bottom, and it was a horrible sensation. And, in addition, he was so miserably ashamed that every time he thought of himself he jumped and went red to the ears.

"It serves you right," he said, "everything serves you right! Of course she knew you were lying. She knew you were a half-starved, feckless, futile mess. And if she didn't laugh in your face it was because she was too decent. You poor, cheap, bragging little upstart with your tuppenny halfpenny pride!"

At which lurid point of abuse, a huge car, very red in the face, clanging a brazen

TEST YOUR ART *ability* FREE

HERE is your opportunity to find out how much artistic talent you have. A simple, scientifically prepared questionnaire tests your natural sense of design, proportion, color, perspective, etc., indicating whether it will be worth while to develop your ability to draw. You will be frankly informed as to what your score shows. This analysis may show you the way to a bigger future—a real career.

Federal Students Are Successful

Many Federal School students are making $3,500, $4,000, $5,000 and $6,000 yearly. The Federal School is recognized everywhere by employers of artists, and by buyers of art work. Big prices are paid for drawings and designs, for advertising. They are a necessity in modern business.

Learn Commercial Art at Home

If you like to draw, an almost sure indication of talent, the Federal Course will soon place you in a position to earn a handsome income. Some students earn more than the cost of the course while studying. Many nationally known artists have contributed exclusive, illustrated lessons to the Federal Course, which has been prepared to train the student in the *quickest possible time.* No previous training is needed. You will receive personal, individual criticism on your work.

Send TODAY for Your Questionnaire!

Just fill out and mail the coupon, stating age and occupation. There is no cost or obligation to you. We will also send book "YOUR FUTURE" explaining the Course and showing work of Federal Students.

Federal School of Commercial Designing

1421 Federal Schools Bldg., Minneapolis, Minn.

New Life *for* OLD WALLS *and ceilings*

Before using Rutland Patching Plaster

After using Rutland Patching Plaster

IT'S so easy now for you to make cracked walls or ceilings as good as new!

You just mix Rutland Patching Plaster with a little water, and fill the crack or hole. The patch will be as lasting as the wall itself.

Rutland Patching Plaster will not crack, crumble or fall out. It will not shrink as plaster of paris shrinks. It's easier to use than plaster of paris because it does not get hard or "set" instantly.

Paint, wall-paper and hardware stores sell it. If your dealer hasn't Rutland, we will mail a package direct and you can pay the postman 30c plus postage. Rutland Fire Clay Co., Dept. F-16, Rutland, Vermont.

Rutland Patching Plaster

McLean Hospital Training School

Offers to men a unique course in nursing with $30 a month, room and board while in training. Graduates in demand at $5 to $10 a day. Dr. F. H. Packard, Supt., Waverly, Mass.

bell and breaking every traffic law conceived by the mind of man, missed him by an inch. Francis picked the fish out of the gutter and went on. He didn't care. He didn't care about anything.

A fire engine thundered and screeched past him. Someone said, "It's on Ninth." And suddenly Francis dropped the fish and began to run. It might have been anywhere on Ninth. But, as it happened, Francis knew—absolutely and at once.

He ran well. People with due regard for safety instinctively made way for him. He came in neck and neck with the second fire engine. But also he came too late. For the first and last time in its dubious career Mrs. Gottlieb's house was looking positively beautiful. Out of the surrounding darkness, the drab windows shone like the eyes of a Medusa whose smoky hair curled sinuously backward and forward in the faint northern breeze.

Helmeted firemen held strategic positions, and with their streaming hose reduced the whole spectacle to a combined display of fountains and fireworks. From the neighboring tenements, on whose roofs the sparks fell in a soft menacing shower, exuded furniture, children, animals, and peculiar merchandise. But on the whole, everyone was enjoying the affair calmly, with the positive exception of Mrs. Gottlieb, who, amidst a pile of soaked and dubious-looking possessions wailed passionately in two languages.

Francis shook her by the arm.

"Miss Dawson!" he shouted, "Miss Dawson!"

A FIREMAN, good-natured but peremptory, trod heavily on Francis's toes and pushed him in the chest.

"Now then, brother, don't you start her off again. We've got trouble enough. You mind your own business!"

Francis pushed back.

"It *is* my business. I live here!"

"Well, you won't live there no more."

"But there are people in that house!"

"There ain't. Not a living soul. Just a lotter junk. Everybody accounted for. You keep out of the way, brother!"

Francis fell back before a resolute jab in the chest. But after that first rush of relief his heart had gone ice-cold. Everybody accounted for. Not a living soul. That meant not only Sylvia and Mrs. Gottlieb but the noisy young man on the third and the peroxide blonde and all the other indefinite flotsam that made up Mrs. Gottlieb's household. It didn't mean Jenny and Bimbo and Kiki. They didn't count. No more than the panic-hunted rats. Not worth a human life. What did people know what anything was worth?

He pushed forward. He was conscious of some vital change in himself. Something was happening to him. He felt bigger. His fists were hard clenched. He remembered a man—younger than himself—who had shouted, "Look here, you fellows, what the hell does it matter if we do get killed so long as we stick it?" (That was just before the German shell got him.)

"Look here," he said, "there *is* someone in that house—three people. I know!"

"And I tell you there ain't—"

"Three cats, my cats!"

"Cats! You're nutty. Cats is all right, anyway. Cats has nine lives."

Sold two stories in one month

"After only a few months of training, I am in receipt of two checks so far this month. One was for an article for the *American Machinist;* the other was for a humorous story in the *American Merchant Magazine.*"

F. J. Wade
Box 505, Sullivan, Mo.

The sort of results you respect and believe in

No exaggeration in this simple, straightforward statement. Rather a real description of a real achievement by a real person much different from yourself.

The Newspaper Institute's New Copy-Desk method of teaching is the product of star New York newspaper men, including several whose fame in newswriting circles is nation wide. Most of today's "best sellers" got their start as newswriters and they say that newspaper training is the best and most direct road to the development of writing ability and *writing confidence.*

Now, *in the privacy of your own home, spare time,* the N. I. A. will work with you *individually,* and guide you *in a few months* through the same phases of training that most well-known authors go through.

The interesting N. I. A. Writing Aptitude Test will be sent free if you'll fill in and mail the coupon. This Test convinced F. J. WADE. If you, too, have wondered about writing as a career, the coupon below offers an opportunity that you should grasp.

Newspaper Institute of America

"Jenny hasn't, she's lost too many."

"Aw, cut it out. We got enough to worry about."

Francis glanced up at the shining windows. His heart was hot now, hot and swollen and heavy. He wasn't going to reason about it. You couldn't. It was above reason. These three were the saddest things in the whole world. They would never know, never understand. That was the terrible pathos of all animals. You couldn't explain to them, neither your brutalities nor your mercies. You took their world from them. And, in spite of everything, they had an odd, blind confidence in you. But they would never understand.

Jenny and Bimbo and Kiki wouldn't. If it had been Sylvia trapped in that house, at least she would have known that it was an accident, and that people were risking their lives to save her. But Jenny and Bimbo and Kiki would never know. They would cower in their forgotten corner, dying slowly and terribly, bewildered, knowing nothing except that their strange god had deserted them—left them to this red, burning terror.

And they had trusted him. They were all he had. They were each other's refuge against loneliness. They were friends. You didn't desert your friends. . . .

Very neatly Francis tripped up the fireman who blocked his path. In three bounds he was over the wet pavements and up the steps and into the dim, luridly glowing hallway. He heard a shout go up. But he was happy and exultant. He was himself again. He didn't mind dying. Just so long as it was decently, and that these three knew he wasn't a dirty traitor. They wouldn't know what it was all about. But they would know that he had been faithful.

The narrow stairs were dreadful with heat and smoke. Ominous crackings sounded under his racing feet. He was choking and half blinded. The door of his room was jammed. He burst it open with one savage thrust of the shoulder.

AND there, outlined against the brilliantly illuminated background of blank wall, he saw Jenny's shadow. She was crouched tigerlike on the window sill—an elemental, primitive figure of ferocity and terror and great courage. For she had an overgrown child in her mouth, and was poised for the hopeless, sacrificial leap.

Herself alone she might have saved. But she too was under the law.

He called to her. At the last moment she turned her head and saw him. He caught the gleam of her green eyes. He heard her familiar croon of welcome as she jumped down heavily to meet him.

He thrust Bimbo and Kiki each into a pocket. Jenny he buttoned under his coat. Her claws dug deep into his chest. There was something piteous in that cruel, instinctive clinging to him.

He stumbled out. The smoke had thickened. For a moment he lost his way, feeling blindly for the stairs. He heard voices in the red depths, coming nearer, shouting to him.

His foot struck something soft—living, moving.

He bent down. He knew now where he was—at the foot of her stairs—and that she was lying there.

"Feeling fine and going strong"

That was written into a weekly report from one of Delle Ross's students.

Delle Ross has healthfully reduced thousands of men and women who formerly weighed too much for good health or good looks.

Her method is simply food eaten in correct combinations meal by meal. She does not ask people to give up the things they like to eat. But she changes the *combinations* of food to which they are accustomed. For instance—

Suppose you like potatoes very much. She doesn't tell you not to eat them. She simply tells you to stop eating them at the same meal with some other food which makes a fattening *combination,* for you. She asks you to eat them with foods which she knows will make a *reducing* combination, and yet entirely satisfy your hunger.

She submits menus by mail, and at the end of each week, students report progress, so that health can be guarded and weight reduced steadily. It is an intensely personal service on her part and she takes infinite time and care for each individual problem. For this reason students must be accepted in order of application.

If you consider yourself overweight, send in your name today. The Delle Ross System is the one safe, sure, easy way to lose weight without hunger, or exercise, or drugs. And you don't need to be a diet bore, either. Delle Ross menus contain wholesome, everyday foods in combinations that are easy to achieve anywhere.

357 lbs.

Mrs. Harry Darrin, Atwood, Illinois, who reduced 153 lbs. in 17 months, by the Delle Ross System.

204 lbs.

Do you want to know more? The coupon below will bring you the rest of the story, without putting you under obligation to enroll. Tear it out now while you are thinking of it. Your name will be held in confidence.

Delle Ross, Eddy Building, Bloomington, Ill.

If you can reduce weight simply through the right combinations of foods, I am interested.

He lifted her. He was glad he had been an ice man. If you could handle ice you could handle anything. He held his strange burden close to him. She stirred faintly, and he caught her whisper:

"I came back. I tried to get them for you."

And at that, Francis knew it was all right. There wasn't a fire on earth that could stop him now. The last hampering chain of disillusionment and self-distrust had broken. He had become in one splendid moment a superman.

IT MADE a wonderful headline, for which the newspapers, becalmed in the summer doldrums, were extremely thankful. Several sob-sisters wrote articles on the amazing intuition of love. For how otherwise could the romantic Francis Clairvaulx have known—in spite of all assertions to the contrary—that his beloved was in that burning, empty house?

Jenny, Bimbo and Kiki never figured in their calculations. And Francis himself is discreetly silent. There are some truths that are so misleading that they are better buried.

But sometimes he suspects Sylvia of a suspicion. As when, for instance, people make unflattering comments on the presence of the children, grandchildren, and great-grandchildren of the indefatigable Jenny in an otherwise respectable and charming household.

"You see," Sylvia says slyly, "my husband loves them better than anyone in the world. I believe, if it came to a pinch he'd save them before he'd even remember me."

And Francis, who is really a great writer and not easily embarrassed, looks shamefaced but defiant.

"Of course," he retorts. "I owe them everything!"

And they both laugh.

The truth is, they can afford to laugh.

"Be Yourself, George; Be Yourself!"

(*Continued from page 39*)

was a complete vaudeville program, the entire cast traveling together from one theatre to another.

"It was a new idea, and seemed to be a good one. But somehow it failed to work, so the Shuberts abandoned it. However, *my* unit had done well! Consequently, with this success to my credit, they offered me a ten-weeks engagement at the Winter Garden. That time—my second try in a Shubert revue—I wasn't a rocket. Instead of ten weeks, I stayed there a year.

"But even with that record to stand on, I couldn't seem to get a firm footing. Again I had to resort to vaudeville; this time in a sketch called 'Go Back Home.' It did well in the big cities; but in the smaller ones the audiences seemed to wish I'd take my own advice and go back home.

"Then came one fluke after another. Finally, a manager offered to put on a play, with me as the star, if I would buy an interest in the production. I jumped at the chance. But the day before we were to start rehearsals, he tried to bor-

ow fifty dollars from me—and I dis-
overed that he didn't have even the
aditional shoe string with which to
nance the play. So I got out of that.

"Then I went to California in vaude-
ille. While I was there I had a telegram
om Sam Harris offering me an en-
agement in musical comedy. I hustled
ack to New York, only to find that the
roduction had been given up.

"Then I took the only job I could find
-singing in one of the night clubs, where
eople eat and drink and dance! I had
een getting some pretty hard bumps; but
ith that one it seemed as if I must have
truck bottom.

AS IT turned out, that was just what I *had* done. While I was working in
he night club and doing a vaudeville turn
ccasionally, Alfred Lewis came to me
ith a play based on Raphael Samuelson's
tory, 'The Day of Atonement.' I had
een the script and thought I didn't want
. But I was desperate, so I took it home
ith me and began to study it.

"I don't want to hang crape on myself;
ut it's the honest truth that I'd been
aving just about three hundred and
xty-five unhappy days a year, for several
ears. Perhaps they were what I had
eeded. Anyway, they taught me a lot
bout a good many things, including
eartstrings! And as I studied that play,
could see how it might be made to car-
y a sincere appeal to human hearts.

"I'm going to be perfectly honest again.
confess that I was looking for a box-
ffice success. But it just happens that I
elieve a sincere human-interest play
ill be a box-office success, if it is well
ritten and well acted.

"I wrote my own part in this play,
hich a million people now know as 'The
azz Singer.' I wrote a good many of the
her lines. A cast was engaged and we
arted rehearsals.

"This was in May, 1925, when I was
ill earning my more-or-less-daily bread
y working at the night club. I never
all forget that experience. The play was
nstantly in my mind. I was always
inking about the lines, trying to imagine
st the right inflections to give them their
eaning. And while I was doing this,
l around me there was the clink of glasses,
e wrangle of jazz music—everything
at was artificial and false.

"In June we went to Stamford for a
uple of nights of tryout. We hadn't had
dress rehearsal. The scenery didn't
rive until a few hours before the per-
rmance was to begin; and when it did
me it was all out of proportion.

"'We might as well postpone the
pening,' Lewis declared.

"'Wait till I see the advance sale,'
said, and hurried to the box office.

"I found that the advance sale
mounted to about three dollars! It looked
s if we were going to play to an empty
ouse. It would be practically a dress
hearsal—which we certainly needed—so
decided to go on with it.

"When I went down to dinner that
ight, at the hotel in Stamford, I thought
ere must be a theatrical convention in
wn! A good many actors have country
mes in that section and they were there
force. So were the managers and pro-
ucers.

"'What are you doing here?' I asked.

Hotels Need Hundreds of Trained Men and Women

Will you accept one of these big paying positions in America's 4th Largest Industry? Thousands of positions now open in hotels, restaurants, clubs, schools, colleges, hospitals and institutions! You can easily get one of them! No previous experience necessary!

MANAGE AN APARTMENT HOTEL

Men and women needed as Managers for $200,000,000 worth of apartment hotels being built in 1927. Interesting work, big pay. YOU can qualify!

CLIFFORD LEWIS, President
Lewis Hotel Training Schools

Formerly U. S. Gov't Hotel and Restaurant Expert, now Managing Consultant to over 225 hotels, who has qualified thousands of men and women for success in the fascinating hotel and institutional field.

These Students "Made Good"

Thru Mr. Lewis' efforts a Lewis Student was appointed Executive Housekeeper in a State Governor's Mansion. Another, without previous experience, became Manager of a large hotel—3 months after enrolling! A Lewis Trained woman is now Hostess and Manager of a fashionable apartment house—salary $3,600 a year, apartment included, while the man recently made Assistant Manager of a 15-story residential hotel in New York, knew absolutely nothing about hotel work before taking the Lewis Course! YOU can do as well.

Thousands Make $2,500 to $10,000 a Year

The Lewis Schools have qualified thousands of men and women for $2,500 to $10,000 a year hotel jobs. Get into this delightful profession—others earn $45 to $125 weekly—YOU can do as well! Learn in your spare time at home. Many students obtained well-paid hotel jobs *before* finishing the course!

Big Pay—Fine Living—Fascinating Work

America's 4th Largest Industry offers many big advantages. Salaries are liberal, meals and apartments usually furnished FREE—advancement quick!

I Guarantee to Teach You

in my home study course all that leading hotelmen know about the business. Age is no obstacle—previous experience unnecessary. A common school education is all you need. I put my students in touch with positions everywhere!

BE A HOTEL HOSTESS

Hotels, clubs, apartments everywhere are calling for hostesses, managers, etc. Splendid salaries, fine living, luxurious surroundings for *you!*

Our Free Book, "YOUR BIG OPPORTUNITY" tells about the wonderful opportunities open to you in this fascinating profession and explains how you can quickly become a high-salaried hotel executive. Registration in our Employment Bureau FREE! Send for this big, FREE book TODAY!

All Out Of This Little Check Of Mine

"COME—look at this check, Jim"—cried Anne rapturously from where she had been opening her mail.

Her eyes sparkled with excitement, and a warm glow crept into her cheeks that made her look lovelier than ever.

"It isn't really a check at all—you know," she explained rather breathlessly. "It's the guest room—all done over with new paper and pictures on the wall, and new curtains. Can you see it? All out of this little check of mine!"

Half-amused, half-convinced—he whistled softly. He hadn't wanted Anne to be earning money at first. But this seemed to be different—and she got such a lot of fun out of it.

Anne is like hundreds—yes, thousands of other young wives. She loves her little home—finds that all of her world is wrapped up in her handsome husband, and little five-year-old Peggy.

Never—never did she think she could do it. Earn money? When she had so many other things to do? She'd never have the time!

And yet, now, on an afternoon, or in the evening, she is turning her spare moments into these extra dollars. And it does not interfere at all with her other duties!

She's looking forward to Christmas joyously—hopefully. Are you?

Or are you just a little bit afraid, deep down in your heart, that it may not be such a "good Christmas," this year?

Christmas at home is the most beautiful of all things.

If you're wanting to earn money for your gift-giving, why not look into our Pin Money Club? The girls of today are too eager, too clever and capable to waste time in "wishing." This is the time to begin doing something.

It's your Pin Money Club, too. You can't be too old, or too young to join us. And you can earn $5—$25—$50—as much as you want and need, whenever you want it.

Don't wait. Send your letter off before your head touches the pillow tonight, and receive all the details of our plan.

Margaret Clarke

Secretary, Pin Money Club
Department 0
The American Magazine
250 Park Avenue New York City

"To my amazement, they said they had come to see me in my new play. And then I realized that, while I had been doing my sketches and vaudeville turns, all the time thinking that I was just lost in the crowd, the managers had been keeping tab on me, watching to see whether I had the ability to become a real actor.

"That night the theatre was filled; but with an audience of professionals, which is the kindliest and most responsive audience in the world. To judge from their reception of the play, we had a regular knock-out.

"But I had learned something about audiences by this time; and I said, 'Wait till to-morrow night!'

"The next night we had the townspeople, and instead of being 'knocked cold' by the play, they were only lukewarm.

"All right! We went to work again, rewriting it, getting more into it and getting more out of it. Then we tried it again at Long Branch. It went better; but we had another siege of rewriting and polishing before we took it into New York.

"We opened there in the heat of summer, a bad season for any play. However, we were willing to risk it, because we thought we had a regular smash.

"But it *wasn't* a smash! The critics were fairly kind—in a patronizing sort of way. All they could see in the play was 'another piece about Jewish life.'

"But that wasn't my only worry. Inside of a week, I found myself in a curious dilemma. Our audiences were ninety per cent Jewish! Now, I am loyal to my own people. But I wanted to reach *everybody*! What I was trying to convey was not a racial idea, but a universal, human one. Something had to be done—and done quickly.

"SO I started a regular campaign of propaganda. For weeks I offered my services at benefits. I played one hundred and forty-four benefits. I spoke at dinners and luncheons and suppers for every kind of organization—Protestant, Catholic, Hebrew, Masonic. Everything, I guess, except the Ku-Klux Klan; and I'd have included that, if I'd had the chance.

"In New York, I gave a special performance of the play, to which I invited more than a thousand clergymen, representing every religious denomination I'd ever heard of, and a good many I hadn't known were in existence.

"Gradually all this work began to bring results. Our audiences were still largely Jewish; but they were from a different class; and they held a growing percentage of Gentiles. The play became one of the most successful ones in town.

"But when it came to taking it out of New York, which has an enormous Jewish population, and giving it in other cities and towns, people said it couldn't succeed. Everybody advised me not to attempt it, but I insisted on taking the chance. Again I wanted to find out whether I was an actor, or merely a Jewish actor.

"'Which city will be the hardest one to tackle?' I asked; and they told me it was Boston.

"'All right,' I said; 'we'll go to Boston.'

"'You can't last there more than a week!' they declared.

"'We'll see!' I said. 'Pick out the most conservative and dignified theatre in

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

Boston, and engage it for four weeks!'

"They selected the Hollis Theatre, where the most distinguished actors have appeared and before the most cultured audiences. The finest people in Boston came to see us; and for four weeks they kept on coming! The newspaper criticisms were serious and discriminating. The play, and the star, had met the test.

"We took the production to New London, a conservative old New England town; and there, too, the audiences were enthusiastic.

"To me, all this meant much more than a reputation which might be merely a passing one. It meant that I really was able to reach all creeds and classes. And it meant that the years during which I had stuck doggedly to my own ideas and methods had not been wasted.

"As I said before, if I deserve any credit at all, it was because I had the faith and the persistence to use my own talents, such as they were, and not yield to the temptation of borrowing other people's methods. In everything I have done, I have been George Jessel! I have not been an imitator.

"OUR play, as you know, is about a young Jew whose father is the cantor in a synagogue; somewhat the same thing as a choirmaster in a Christian church, except that his work has a more profoundly religious aspect.

"The boy can sing; and it is the dream of his parents that he, too, shall become a cantor. Instead, he goes on the stage. At the time of the play, he is to appear in a jazz musical comedy. He loves his father and his mother, but he loves his work also; and he believes that he has the right to follow his own desires and ambitions. It is the familiar struggle, you see, between the older and the younger generation.

"Then comes the time of the Jewish Day of Atonement. It is also the first night of the musical comedy. The father has become ill and there is no one to take his place in singing the old Hebrew hymns. He knows that his boy, whom he trained from childhood, can do this. He is bitter against his son, whom he considers a renegade to his race and his religion. The mother is torn between loyalty to her religious faith and love of her son.

"The boy faces a hard alternative. How *can* he fail in his obligation at the theatre? But how *can* he refuse to help his own father? How *can* he be false to his love of his parents, his duty toward them?

"It is only in the surface details that the situation is a Jewish one. The fundamental thing is the love that exists between parents and their children; the duty of the younger generation to the older, and of the older to the younger. It is the conflict between two obligations; and *everybody* comes face to face with this conflict, sooner or later.

"In this case, the boy accepts the obligation to his parents! He puts on the robes of their religion; goes into the synagogue, which is off stage; and, through the open windows of his father's and mother's little flat, the audience hears the choir singing the old Hebrew hymns, knowing that the boy's voice is leading them.

"Now, all this might be mere hokum, if it were not played with respect and sin-

"Just Spread on and Shave"

Simply wash your face to remove dust and dirt, apply MOLLÉ with the finger tips, shave once-over with your favorite razor (any type) and then dry your face.

cerity. But the things which so many people call 'hokum' on the stage—mother love, loyalty to the country and to the flag, sentiment of all kinds—is based on the finest and most beautiful human instincts. They become hokum only when they are presented in the *spirit* of hokum.

"Well, I am not guilty on that score. 'The Jazz Singer' is played with sincerity. For example, when we sing the Hebrew hymns—although we are behind the scenes, where the audience cannot see us—we wear the appropriate religious robes and stand before a real altar.

"People don't know this. They probably think that the singers are simply a bunch of extras, dressed just as they have come in from the street, without the remotest suggestion of anything sacred in their surroundings. But if that were the case, I don't believe those hymns would carry sincerity and conviction. They would be a mere theatrical trick.

"You may think I am inconsistent, that a desire for sincerity and a desire for a box-office success don't go together. But you can't have a box-office success without satisfying people's hearts and minds! And you can't do *that* without a sincere understanding of human emotions and reactions. The box-office receipts are a barometer which measures the degree of this understanding.

"DO YOU know what I do? I often go into the box office, during the day, and sell tickets! . . . Why? . . . Because I *like* people. I want to see the folks who are coming to see me. In this way I get a real close-up of them.

"And here is another thing: I confess that I am a long way from being an orthodox Jew; and perhaps, for that reason, you think I can't play this rôle with sincerity. But there, again, you have to realize the difference between a special appeal and a universal one. To at least half the audience, a Jewish family crisis is of no interest. But family love, duty, struggle, unhappiness—*these* mean something to everybody on earth.

"Well, I've known unhappiness! I've lived with it, day in and day out. I've had my own struggles. And when I play this rôle on the stage, all this experience is back of it and shows through it. What counts is the *reality* of suffering; not the *realism* of the circumstances which *cause* the suffering.

"Naturally, I want to keep on being a star; so you can be pretty sure that I've tried to analyze my career in 'The Jazz Singer.'

"I believe it is due chiefly to two things: One is sincerity; the other is the fact that the play appeals to a fundamental and universal human emotion—the love that exists between parents and their children."

A LEADER IN BUSINESS, with an income close to a million dollars a year, said, "If brains counted in business, I'd still be driving a truck." Next month in "Do You Need Brains to Get Ahead in Business?" Ernest T. Trigg, president and general manager of the John Lucas Company, of Philadelphia, thoroughly airs this interesting and provocative subject, and tells what type of brains gets the rich monetary rewards.

"The World Needs Fun and I Aim To Make Some"

(*Continued from page 37*)

or, despite the duck story, Hensel be-eves in talk, only it must be talk to an id.

That night I sat in the orderly hard-are store while the fiddlers played and e cloggers danced. It was Saturday ight at Hensel's, when there is always usic on the fiddle, for, as George Hensel ys, "there is something about a fid-le—" In and out of the store drifted en, young and old, farmers, merchants, e postmaster. They came and fiddled d laughed and danced and fiddled gain. There were few sales, but the store pects little trade on Saturday night. eorge Hensel at his desk received a few eposits for the bank, to be held over ntil Monday; but in the main it was a ght of friendship.

And such a gathering! There was Tom, e handy man, employed at odd jobs, ho never got far at school. From Tom ross to Galen John Peoples Raub, an lucated, cultivated gentleman, tailored of Fifth Avenue, with a red tie on, and geranium in his buttonhole, alike expert ith his tongue, his fiddle, and his feet, d the youngest seventy-five I have ever en. From Raub to Joseph Hooker imer, of old Pennsylvania Dutch ex-action, Joe of a beaming, ruddy counte-ance and infectious smile, fiddling on his ecious 1792 violin, Joe, who never kept e name of a tune in mind but never rgot the melody, a man of property, ith sawmills and farms as his possessions, ther of thirteen children, and numerous andchildren.

Out of such gatherings has George ensel's usefulness grown. Probably no an in Lancaster County's hundred and ghty thousand touches more human ves with as beneficent results.

ON THE seventeenth of April, 1837, George W. Hensel, Sr., a lad of four-en, walked into Lancaster County from arlington, Maryland, and took a job at e country store. Right from the begin-ng, he saved money from his forty and und a year. When he married, he bor-wed the only buggy in the county, walking ght miles to borrow it and eight more to turn it, so that he might drive his bride me. His wife bore him ten children, all whom lived to maturity. In the mean-me he had prospered. He started the ensel hardware store, and in 1867 estab-shed a national bank at Strasburg, and r twenty-five years drove there weekly. e was also instrumental in bringing the rst railroad to Quarryville, and he drove e last spike. In 1883 he established the ank at Quarryville. When he died, his roperty was divided among his ten chil-ren, and the bank presidency passed from e family until George W. Hensel, Jr., as elected to the office in 1910. Will, eorge's elder brother, showed great bility. Educated as a lawyer, he became ttorney general of the state, and the resident of Franklin and Marshall Col-

SENT ON 30 DAYS TRIAL

7 Tube Set

Home-Study Training Increases Salaries!

"It *works!*" That's what a production engineer told Raymond C. Cooley when he asked him his opinion of LaSalle training.

Cooley enrolled for training in Industrial Management Efficiency—found his niche in the great Parker Pen organization at Janesville, Wis.—and increased his salary 150 per cent.

"It *works!*" says Helen Morrissey, Office Supervisor. "Several hundred people are under my direct superintendence in the Parker Pen Company, and in my work there are countless instances where this practical training has been of great value."

"It *works!*" says Russell C. Parker, Vice-President in charge of production. "We always have room for men and women who want to advance with us and who are willing to study to develop the *capacity* to advance. Basing my opinion on the records of the persons in our company who are taking your courses, I should say that LaSalle courses constitute a very effectual training."

Start Toward a Bigger Salary—Today

Are you looking for a lift—or—an opportunity to lift yourself?

If you have the urge and the will to get ahead, you should send at once for LaSalle's 64-page book describing the opportunities in the business field in which you most prefer to win success—also your copy of "Ten Years' Promotion in One." The coupon will bring them to you *free*.

A pencil—an envelope—a postage stamp! Get these two books now—and make your start TODAY.

Find Yourself Thru LaSalle!

BLACKSTONE INSTITUTE, 4753 Grand Boulevard Dept. 28 Chicago

lege. George, Jr., timid and retiring, wanted to be a lawyer too; but his father decided he should be a hardware merchant, and he went into the store at sixteen and stayed there.

"I always looked with admiration at my brother Will," he told me. "Will was a great man. If he had lived, almost anything would have been possible to him.

"But, after a long time, when I had thought I never would amount to much, I came to a decision: It is possible for but few of us to do great things in this world, but there are thousands of little things to be done to make life happier and more pleasant. So I set out to do a few of them.

"But by the time I was forty I discovered that you couldn't take any water out of an empty barrel, and that if I wanted more out of life than I was getting I would have to put more into it. I got to writing up things that had happened in our neighborhood, and the local paper or the Lancaster papers printed some of them. Out of the reading of these I was asked to write a column for the Philadelphia 'North American.' That made me observe life more closely, and I have continued to observe life closely for the past twenty-five years. As far as I could see, the greatest need in my quarter of the earth was more happiness, more fun."

OUT of George Hensel's desire for fun has grown the most unique order on record. "The Ground Hog Fraternity," established in that first year of fun-seeking, very much alive to-day with fifty-five men of substance as its members. On the second of February every year, when the wise marmot who decides whether or not winter is going to continue to chill our bones comes from his hole and walks about, he has fifty-five citizens of Lancaster County to watch him.

It is safe to say that the ground hog was never afforded less privacy than in this region. Every home of his is spotted all through the year, and on February 2d the watchers, in the full regalia of the fraternity, are ready to take his verdict upon the season and celebrate it at a great banquet. It is a secret fraternity, so that I cannot tell you of its other observances, but I have met the Defender of the Faith, and the Chief Eye Rubber, although I missed the Assistant Eye Rubber, the First and Second Sleepers, the Patriarch de Luxe, the Lord High Executioner and his Moral Supporter. I did, however, manage to shake hands with the Bondless Treasurer, the first I had ever known of that brand.

This unique fraternity, a satire on all existing secret orders, has met with the most astonishing publicity. Four newspapers, including the New York "Times," are its official organs, and from coast to coast on February 3d, citizens read of the doings of the Slumbering Ground Hog Lodge of Quarryville, Pennsylvania. Many of them write in and ask the rules, stating that they are thinking of starting lodges of their own.

"And we tell them," chuckled George Hensel, "that we cannot transmit the spirit of the Lodge, and without that spirit how can they start? And," with a huge laugh, "they take it seriously and remonstrate with me, and we remain, so far as I know, the one and only Ground Hog Lodge on earth!"

To find the dentifrice that best ... *suits your needs*

ASK YOUR DENTIST

YOUR dentist is familiar with the action of various dentifrices upon the teeth and gums. He knows the requirements in your individual case. He is the only one competent to tell you which dentifrice is best suited to *your* needs. So ask him—then follow his advice faithfully.

If he tells you to use Pyrozide Powder, there is a good reason for it. He knows that your mouth requires the more effective cleansing power of this sterilized powder.

PYROZIDE
POWDER
STERILIZED DENTIFRICE

CONTAINS White Oak, Elm and Peruvian Barks, Precipitated Chalk, Dentinol and other medicinal agents. It is effective for mouths requiring a high degree of cleanliness. Its value has been demonstrated to the dental profession by laboratory and clinical work since 1906.

ECONOMICAL—the dollar package contains six months' supply. At all drug stores.

There is one thing certain about members of this lodge, they have learned how to laugh. Maybe a part of that laughter can be transmitted to you by the pledge of faith here quoted, which is always recited in concert at annual meetings:

We believe in the wisdom of the ground hog.

We declare his intelligence to be of a higher order than that of any other animal from the tick of the blackberry to the elephant of the jungle.

We rejoice that he can, and does, foretell with absolute accuracy the weather conditions for the six weeks following each second day of February.

We rejoice further that he is magnanimous, and permits other hogs, prophets, and almanacs to employ their talents on the remaining 46 weeks of each year.

We assert that if he was more of a man and less of a hog he would form a trust, and do all the prognosticating, thereby sending Baers, Hicks, Goose Bone and other Hot Air Artists to the woods.

To defend him, his family and his reputation, we pledge ourselves.

To guard him as he slumbers, his habitations, and his haunts, we pledge ourselves.

We welcome him in our clover fields; to bid him dig and delve; to invite him to sit on the top rail of our fences; to stay the hand of desperate men who would slay him; to kill the dog who would excite and ruffle his temper; to defend him with all our might and at all hazard, we pledge ourselves, our man servants, our maid servants, our oxen, our asses, and our assets as a whole.

THE Ground Hog Lodge has attracted more attention to Quarryville and to George W. Hensel, Jr., than his bank, his hardware store, and all his good deeds. One of George's friends says that he attends his bank like a real banker, and, considering the bank's flourishing condition, this is undoubtedly true. With a capital of sixty thousand, a surplus of two hundred thousand, stock selling at four times par, and the last dividend sixteen per cent, the bank is a flourishing institution.

It is a most unusual bank. A large part of the deposits are made out of banking hours, to George Hensel in his store. It turns away no honest depositor, no matter how small his account. Some of its notes run as small as two, three, and four dollars. One of George Hensel's particular friends who fishes a little, hunts a little, and does little else, comes in every once in a while for a small loan. As he is George's particular friend, George endorses his note. But one day George was away. The fisherman entered the bank and spoke to the cashier.

"I'd like to borrow ten dollars," he said. "Can I get it?"

Elfred Sellers Harkness, patriarch of the Ground Hog Lodge and cashier for forty-three years, said gently:

"Well, I guess so. Have you any security?"

The fisherman pulled out a ten-dollar gold piece and flung it on the counter.

"That good?" he inquired.

"Good as gold," replied Harkness. "But tell me why do you want to borrow when you have ten dollars?"

The fisherman stiffened.

"I'm goin' to show the people of my community," he said, "that my credit's good at this bank, whether the president's here or not."

"There are two things that have surprised me as a banker," says Hensel.

The guaranteed TREATMENT *for* DANDRUFF

WILDROOT is not a cure-all. We make no extravagant claims for it. But it does remove dandruff—we guarantee to refund your money if it fails.

Wildroot loosens the dandruff, removes it—kills the dandruff germ—tones the scalp and leaves the hair soft and lustrous.

Tested for twenty-eight years

Why take chances with untried products? Wildroot has been an acknowledged treatment for dandruff for 28 years.

Use Wildroot *regularly,* both to remove dandruff and to prevent its return. Get a large bottle from your druggist today. Always ask your barber or hair dresser for a Wildroot treatment.

"One is the people who have money and the other is the people who haven't." It is as a banker that Hensel became guardian to a good many of the children he and Josephine Hensel have fostered.

"That's Jo's field," George Hensel insisted, to which the active, practical, charming woman who has shared his life replied:

"Well, we never could have cared for some of them if you hadn't found the means. I think George is wonderful about finances. Why, he took one boy who was left him with just seven thousand dollars; and he sent that boy through college and presented him with ten thousand when he got out."

"How did you do it?" I demanded of George. "Did you give him the money?"

"No," he denied instantly. "A good deal can be done with seven thousand, and the boy helped. He was a good boy."

Nine children have lived with the Hensels for greater or less periods. But Hensel always has on hand four or five wards whose money he has charge of, and whom he sees through school and gets to work. He is the friend of children at large. When the circus comes, he takes them in ever-increasing numbers. On his fifty-fifth birthday he had a big party for them at his home, and told them all bird stories and fixed up a number of bird boxes. The whole county is filled with bird boxes Hensel has induced people to place.

"Very few people," he said to me, "realize how intelligent a bird is. You can believe this or not. It's true. There was an old engineer on a little line near here, who was, like me, a bird lover. Well, he would stop his train and feed them all winter. He ran a freight train, and as it was on a small road, nobody cared for a few minutes. The birds evidently told each other, for they got to coming in bigger and bigger numbers. They even got to know his train and his whistle. And in winter, when food was scarce, they would wait his coming; and when the whistle of his train blew, the whole pack of them would fly down to it. Fact."

FOLKS live long in Lancaster County, Pennsylvania, and as Hensel has made most of the wills of the countryside he has slipped into the position of legal adviser to a number of old people. I heard tale after tale of these "clients." There is Aunt Lizzie, who, when widowed, was left to George's care. She has an income of thirty-six dollars a year. Hensel managed to find her boarders from the Children's Aid Society. For thirty-two years he has helped her to help herself.

Then, there was Mike McDonaough, whose only claim upon George Hensel was that he, like George, loved every inch of the fertile soil of Lancaster County. Mike had been a world rover. Born in Ireland, he had served in the British Army with distinction for twelve years. He had traveled in Africa, India, and the Orient. One day he wrote Hensel about an item he had read concerning him in the local paper. Thereafter George and Mike were friends. Although Hensel declares he has little time for people who won't work, Mike certainly did as little as he possibly could—sleeping in the woods in the summers, doing odd jobs in the winters, and disappearing for long periods at a time.

How Do Your Feet Look From Behind?

JUST as you have noticed the untidy appearance crooked heels or "run-over" shoes give to others, so it is noticed in you...Crooked heels throw the whole weight of your body on the *outside* of your feet, causing the ankles to wobble, bend outward under the severe strain and thicken. They induce weak ankles, tender heels, callouses and leg pains.

Dr. Scholl's Walk-Strate Heel Pads correct this fault at trifling cost. They keep you "in balance", and add immeasurably to your comfort, grace and pleasure in walking; lengthen the life of your shoes; preserve their shape; save repairs.

Dr. Scholl's Walk-Strate Heel Pads are soft, comfortable, and quickly attached inside any shoe. Sizes for men and women. At all shoe and dept. stores and leading drug stores. 35 cents per pair.

Dr Scholl's Walk-Strate Heel Pads

Made by The Scholl Mfg. Co., Chicago, World's Largest Manufacturers of Arch Supports, Foot Comfort Appliances and Foot Remedies.

For thirty years, Hensel found him such work as he would do, and clothed him in his discarded clothing. When, for the twenty-eighth year, Mike, grown gray and wrinkled, slipped comfortably into a coat of George's, he viewed himself in the mirror with a sigh of great content.

"Oh, wasn't God good to me," he said, "to make me exactly the same size as you, George."

"My wife and I," said George Hensel, "just naturally love old people." A part of their love expresses itself in visiting.

"We try to visit twice a year, at least," said George. "There is Aunt Mary. She lives all alone, at eighty-four, bless her brave heart, in a little place up in the woods. When she was eighty-one she broke her wrist, and the doctor came to set it. We visited her shortly after. She showed us the wrist, nicely set, and said:

"'It's terrible expensive, George, getting a wrist set. It cost me five dollars.'

"A year after, when we saw her, she waved her other hand to us.

"'Come in,' she said gayly. 'I broke my other wrist sence you been here. See it!' She waved it at us, and we saw it was set rather badly, with a lump. 'Set it myself,' she said in triumph. 'Watched the doctor, I did.' Can you beat that for grit, that old lady setting a broken wrist at eighty-two?"

NOTHING'S too much bother for the Hensels to undertake in behalf of the old. Josephine Hensel has a list of twenty-five old ladies who receive some little remembrance from her every year at Christmas, Easter, and Thanksgiving.

George Hensel loves to do unusual things. Once he took an old farmer who had never seen a show to see "The Old Homestead." The farmer protested that he had no suitable clothes, so he was outfitted in George's, and wore the first derby hat he had ever had on his head. They stayed at a hotel in Lancaster for the night.

At eight in the morning, Hensel sought his companion in vain. Finally he found him coming from the dining-room.

"Why, Uncle Hen, where have you been?" he asked.

"Well," said the old fellow, "I got up 'bout six, as I wanted to see them Lancaster markets. As I was startin' out, along came that old chap in the play (Denman Thompson), and he says he wanted to see 'em too. So we went and—say that's a fine man that Thompson, he took me to breakfast with him!"

"For a first trip to a play and the first one in years to the city," says Hensel, "I'll say Uncle Hen got along all right. I got him to introduce me to Thompson."

Almost thirty old folks, men and women, receive numerous post cards and letters on their birthdays, because George Hensel writes letters to people asking them to send them. One old man of ninety who had been quite a prominent figure in state politics, but who had suffered financial reverses and been forgotten, remembered his ninetieth birthday as a bright spot in a drab world. Hensel wrote one hundred and forty people about him, and everyone, from the governor of the state down, responded by sending a birthday letter.

With the old folks Hensel has formed two organizations. The first is called "The Continental Congress," and con-

Mellin's Food A Milk Modifier

Healthy babies are happy babies and this ideal condition is due largely to good food so well planned that with but little digestive effort all nutritive elements are readily taken into the system in suitable amounts to nourish completely every part of the body.

Mother's milk is a perfect food, yet full and complete nourishment may be supplied for the baby deprived of human milk by following the carefully studied plan which has made Mellin's Food well known throughout the world as a scientific modifier of milk for infant feeding.

Write today for a Free Trial Bottle of Mellin's Food and a copy of our book, "The Care and Feeding of Infants"

Mellin's Food Co., 177 State St., Boston, Mass.

Young outdoor men wanted

Interesting, vigorous outdoor work in a growing organization where merit wins advancement. Good starting wages. Permanent positions and a real future for men who make good. Our present field force of Davey Tree Experts cannot meet the increasing demand. So we are selecting now, to enter our employ, a few sturdy, clean young men, thorough Americans, single, between 20 and 30 years old, free to travel, industrious, with good practical education, and able to give good references. Write for qualification blank to serve in place of personal interview. The Davey Tree Expert Co., Inc., 857 Federal Bldg., Kent, Ohio

sists of thirteen old fellows who get together on Independence Day for a day's outing.

"We begin by formally approving the Declaration of Independence," said Hensel. "Then we just visit and have fun. Once we tried to put through a resolution approving the Constitution of the United States. The debate was long and bitter, but the resolution finally lost out.

"'I won't approve that Constitution,' said one old fellow, 'that eighteenth amendment has spiled the whole of it.'

The second gathering is that of the Old Fiddlers' Association, begun four years ago just because Hensel says, "There is something about a fiddle—"

The first meeting found a dozen old fiddlers playing to an audience of two thousand. The second and third years both the fiddlers and the audience increased in numbers, and in 1926, seventy-six old fiddlers, from four states, played to a gathering estimated at between fifteen and twenty thousand people. This was a remarkable number, but it is still more remarkable when the character of the entertainment is considered. There were no fixed programs, there were no contests, no charges. Nothing was sold except such food and drink as was needed. Almost all of the folks came with baskets and picnicked in the beautiful woods at Parkesburg. Hensel used a twelve-pound sledge hammer as a gavel, but he did not need it when the fiddles began. People stood mute and listened. There was some dancing, most of it spontaneous. One young old lady of seventy-two challenged anyone to match her steps. Finally, in the late afternoon almost everybody danced, and folks who had never danced and who knew not one step from another entered into the spirit with zest.

If this sounds tame to anyone who is accustomed to elaborate programs and varied entertainment, I recommend that he attend the next meeting. The folks about are satisfied. I read a letter from one attendant to George Hensel:

"Don't let it be changed," he begged. "Let it always be just a simple day of good fellowship."

"But it costs," I protested to Hensel.

"About a hundred dollars," he admitted. "Some of the fiddlers need car fare, and there are announcements and notices. But everywhere there are always some fellows who can't get up things but who like to give, so we let them give!"

I HAVE told of George Hensel's humbler friends because they, more than all others, establish his title to getting one hundred per cent out of living. So many of us are poverty-stricken in life by knowing only one kind of people at all well. But Hensel also knows and is known to every man of substance in that quarter of Pennsylvania; he has known all of its governors for the past forty years; he counted William J. Bryan, Adlai Stevenson, and Frank Woolworth—who started his first store in Lancaster—among his friends. To his activities as banker, he adds those of an active merchant who is a shrewd buyer.

In addition, he holds the office of road viewer, and he is almost as proud of one other post as of his position as Hibernating Governor of the Ground Hog Lodge. This is his presidency of the Martinsville Horse Detective Association

HEAT YOUR GARAGE —5 *cents a day*

A WASCO Heating System (hot water) saves repair bills—the eternal bugaboo.

IN A WARM GARAGE—

The engine starts sooner—no excess gas to cause carbon deposits and dilute the oil.

Bearings are saved from scoring—frequent when oil is cold and sluggish.

The battery is needed less—charges more easily.

The finish is protected—moisture under varnish does not freeze.

The radiator is happy on a sub-zero night—to say nothing of the water jacket and pump.

Tires are preserved—no frozen moisture to loosen the fabric.

The self-regulating Wasco hot water system needs only a scuttle of coal a day. Any handy man can set one up in a few hours. Made for 1 to 10 car garages. Systems include heater with regulators, radiators and all pipe and fittings. Write for illustrated catalog.

Eats Plenty Bread
to keep weight down

Overweight was his difficulty. And no meal seemed complete without a slice or two of bread. Since his wife began using Sanitarium Gluten Flour bread and muffins he has brought down his weight to normal.

In 44.81% Gluten-Flour you get only one-half as much starch. Yet it bakes a beautiful loaf. It is so marvelously rich in food iron that every anemic person needs it. And since nearly every diabetic needs a little starch daily, breadstuffs made of this superior gluten flour will fill the need perfectly.

Everyone may use it profitably in place of beefsteak. Its richness in food iron, lime and vitamins recommends it for growing boys and girls. Used for years at the famous Battle Creek Sanitarium. Sold at all authorized stores. Order a sack today.

and of the Association of Consolidated Horse Detective Associations, which includes associations from Lancaster, Cecil, Harford, and Chester County. For the hills surrounding the beautiful and fruitful countryside have long harbored gangs of ne'er-do-wells, who not only do no work but who prey on the farms below. On the outside of his store George Hensel has placed a bulletin board. For years before radio, news came to him for board posting. Even in this day, the board continues its office, and news continues to flow to Hensel.

"It is like the underground railway," he assured me; "and in this way I've been able to work with the State Police, and jail some of these thieves that come down upon our farms. Why, the harm they do is terrible. Imagine a poor woman farmer losing a hundred and twenty-five chickens in a single night! I helped to get in jail the Cummings gang, that had terrorized a neighborhood for years, and I hope to jail more of those gangs until there is none left."

IT IS hard to conceive of George Hensel as a prosecutor of the guilty; but as a protector of the old and of children he is a stern opponent of the thief who would despoil them.

It is easier to understand his devotion to one other creed, the gospel of the unexpected. One Saturday evening, when Hensel was stopping for a minute at the local hotel, he overheard a conversation between the hotelkeeper and two strangers who had just driven in.

"No," said the host, "you can't get Sunday breakfast at seven here. I don't get up that early."

"Well, we can go without breakfast," agreed one of the strangers. "How about gas?" The hotel keeper shook his head.

"There's Hensel over there," he said, "He sells gas. Dunno if he would on Sunday."

The strangers came to Hensel. It was necessary for them to get on to New York. Could he let them have some gas at seven the next morning. He said he could. When they arrived at his store the next morning, he sold the gas, then stood and looked at them and rubbed his head.

"You know it's the custom here," he said, "for the first gas customers on Sunday to stop for breakfast."

"What?" exclaimed both strangers. Hensel looked, as he can look, vacant.

"I said it was the custom in these parts," he repeated, drawling, "for the first gas customers to stop for breakfast."

He waited while the two strangers consulted.

"We'd have to pay for it, of course," said one.

"Oh yes," agreed George cheerfully. "Of course, I'd expect you to pay for it."

"Well, we have to have breakfast somewhere," said one man in a low tone, "we might chance it."

They followed George Hensel into the large dining-room, where platters of hot cakes, sausage, and steaming cups of coffee awaited them, served by a smiling girl who was in the joke. At eleven-thirty the table still stood with the three men around it, the coffee cups still there, the yarns still going.

"Who on earth are you?" they asked at last. "We are—" It seemed that one

LAW for Greater Success in BUSINESS!
To the man who would rise to a commanding position in business, a sound and practical knowledge of law is exceedingly valuable. Among the larger business enterprises, the law-trained man is often preferred for the higher executive positions. Many great corporations—the U. S. Steel Corp., for example, the C. B. & Q. R. R., the International Paper Co., the National Biscuit Co., the Mutual Life Insurance Co., the Standard Oil Co. of Indiana, the Packard Motor Co., the American Sugar Refining Co.—are headed by men of legal training. In the smaller corporations, or in one's own business, a knowledge of law spells larger success. For the whole intricate structure of business is based on LAW.

Fit Yourself for the Top Positions
"In looking over the field," writes a prominent Eastern manufacturer, "I find that nearly all the positions commanding a salary of $10,000 or more are filled by men who have studied law." Fit yourself at home, in your spare time, for larger success in business. Full law course leading to degree of LL. B., or shorter Business Law course. LaSalle will guide you step by step. We furnish all text material, including fourteen-volume Law Library. Low cost, easy terms. Get our valuable 64-page "Law Guide" and "Evidence" books free. Send for them NOW.

A Sure Way To End Dandruff

There is one sure way that never fails to remove dandruff completely, and that is to dissolve it. Then you destroy it entirely. To do this, just apply a little Liquid Arvon at night before retiring; use enough to moisten the scalp and rub it in gently with the finger tips.

By morning, most, if not all, of your dandruff will be gone, and two or three more applications will completely dissolve and entirely destroy every single sign and trace of it, no matter how much dandruff you may have.

You will find, too, that all itching of the scalp will stop instantly and your hair will be lustrous, glossy, silky and soft, and look and feel a hundred times better.

You can get Liquid Arvon at any drug store, and a four ounce bottle is all you will need. This simple remedy has never been known to fail.

man was an extremely successful N York business man, who had taken second, as his architect, to Washington see a beautiful house he wished duplic on his estate in Long Island. Since day the three have been friends, and only reason Hensel has not been en tained in the completed Long Island h is that he has not found time for a v

How he ever does find time for many activities is a mystery. For he d not hurry. To be friendly require certain deliberation. Hensel takes time. He has been at this deliber doing of "little things that make pleasant" for twenty years. He was fo when he established that policy, and the third of last May, eighty of his m intimate friends gave him his sixty- birthday party. In those twenty- years he has become wise and tender very happy, his philosophy has ripe and is now an established part of him. has brought him recognition as one of best known and best loved men in L caster County. But Hensel is no se mentalist. His main gospel is fun. believes that a good joke has powe draw men together and to make t forget distinctions, to bring them t common understanding. But he ne preaches. He just tells yarns. I do anyone has come nearer to realizing hundred per cent out of living than Ge Hensel. And I doubt if any one of t has given more of himself to life than

The Person I Know Who Gets the Mo Fun Out of Life

An Ounce of Prevention is Worth Fifty Firemen

(*Continued from page 51*)

o find out! It will cost you something; t it won't cost you nearly as much as a will.

I can tell you of one experience which ows the danger in these faults of house nstruction. Incidentally, it shows some ilts in human nature construction!

It was one of the worst nights I ever w. For weeks there had been one snow-orm on top of another. Then had come thaw followed by zero temperature, hich turned all that slush into masses of .

When, just about bedtime, the old eam whistle sounded the alarm, I beat it the engine house. The streets were so that I had to go a bit carefully. A oken leg wouldn't help me in fighting a e! This was true of the other members the company too. We had a hard time aching the engine-house and a worse ne getting the apparatus to the fire. hen we did reach there, the woman of e house gave us a good scolding for ing so slow!

It was a cellar fire, the meanest kind to ht. The boys suffered severely from oke as well as from the intense cold. wo of them had to be treated with lmotors.

The fire had been caused by the over-ating of a big flue, which, only a short stance from the hot-air furnace, passed rough such a small hole in a wooden rtition that the metal was almost in rect contact with the wood.

To have perpetrated so careless a piece construction in the first place was most criminal. But, even if the family en living in the house had moved in ter it was built, they could have seen is dangerous condition by merely using eir eyes.

Imagine, then, how we felt when, after e had put out the fire, the mistress of the use began to berate us for having got r cellar full of water! That woman rtainly had her share of those "faults in man nature construction" I spoke of.

N MY official capacity, I had to go around the next day and inspect the use. I found that the flue arrangement, hich had been responsible for the fire, as not the only dangerous condition. here was another defect, which is only o common.

Now, please read this carefully: The aces between the studs—which are the pright timbers in the framework of a ouse—had been *left open* all the way from e cellar to the attic. When flames get to these open spaces, they shoot up-ard, carrying the fire clear to the roof, nd spreading to the floor timbers at the ifferent stories.

In having a new house built, specify hat the spaces between the studs shall be losed, at *every* floor, by cross pieces upporting some fireproof material, such s cinders or sand. And see that these pecifications are carried out.

Moisture does not affect---

Magnet coils wound around bakelite bobbins with wire, coated by a substance, which a year's research in the Crosley laboratories developed, keeps the Musicone constantly efficient in any climate.

If you are living in a house where this has *not* been done, you can at least close those spaces where they lead from the cellar. And you can close them where they open into the attic.

If you have any doubts about the construction of the house you live in, I suggest that you consult the parties who, next to yourself, are most interested in preventing your having a fire—the insurance people and the fire department.

But don't imagine that all fires can be traced to a fault in the way your house is built. I suppose that thousands of people have an experience similar to one which the fire whistle brought to my notice a little while ago. A man and his wife had just sat down for a quiet evening at home when some slight noise behind her made the woman look up from her reading. She turned—to see the lace curtains at the window a mass of flame. We got there in time to prevent serious loss, although that particular room was pretty badly messed up.

What had happened was this: The man had lighted a match, and then, thinking it was out, he tossed it into the waste basket. You know the rest.

This match-and-waste-basket habit is the cause of many fires. Another quite common cause is not so easily controlled. In the autumn, when the trees are shedding their foliage, the leaves accumulate in the rain gutters on the roofs of houses. At the same time, the weather being cool, fires are built in stoves, grates, or furnaces.

Often these fires are of wood and the sparks carry up the chimney. Some of these sparks fall among the dry leaves in the roof gutters, setting fire to them. Then the blaze spreads to the wooden shingles.

My advice is to keep your roof gutters cleared of leaves. Your neighbors may furnish the sparks, even though you haven't built a fire in your own house.

We had one fire in our town which started in a less common fashion: A lot of leaves were being burned on a vacant lot next to a house. Some of the burning leaves blew in through an open window and set fire to the curtains. Bonfires are rather dangerous, anyway. If there is one near your house, watch it carefully.

NOW that I have told you some of the ways in which you can avoid having a fire, let me add some advice as to how you should act in case you do have one.

The bright office boy's direction to "put it out" sounds sensible. You may think that it should be Rule Number One. Well, there may be times when it would work; but I'm afraid there are more times when it wouldn't.

If it is a small blaze, and if you know what to do, you might try it first. If you have, as you should have, a good chemical fire extinguisher at hand, use it; provided, as I said before, that the blaze is a small one. If you have no fire extinguisher, but think you can immediately put it out with water, you might try that. I hope you realize, however, that water has no effect whatever on burning oil, or gasolene, or grease. In fact, it only spreads the flaming liquid over a wider area.

I must say that, even though the fire may seem to have but little headway, I think your safest course would be to call the fire department *first;* then do whatever you can to extinguish the flames.

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

Right here I want to ask you one question: Do you know *how* to call the fire department?

One autumn night when, as it happened, we were having a sort of party at our engine-house, the door burst open and in rushed a man, clad only in a pair of pajamas. His feet were bare and actually bleeding. He had run about a quarter of a mile to tell us that his house was on fire. We put an overcoat around him and took him back with us on the truck. And later I asked him why he hadn't telephoned the alarm.

"I didn't know I could," he answered. And he was no dub either. He was a successful professional man.

Look on the cover of your telephone book, and you will find explicit directions about how to report a fire. It won't take you fifteen seconds to follow those directions if the time comes when you need to use them. My advice is to devote those fifteen seconds to calling the fire department; *then* follow the office boy's advice and put out the fire—if you can.

IF I thought it would do much good, I would tell you that another rule to follow is, "Keep cool." But I will tell you this: Your best chance of being able to keep cool is to know, in advance, the sensible things to do.

I can explain to you what some of these sensible things are by describing one fire we had in our town; for I think that was the finest example of what *not* to do in such cases. Everybody in the house when this fire occurred did exactly the wrong thing, with the result that the building was wrecked and two lives were lost.

Before I describe what happened, I want to remind you that fire cannot burn without air; or, more specifically, without the oxygen that is in the air. Everybody that tends a stove, or a furnace, acts upon this simple principle. When you want the fire to burn briskly, you open the dampers and give it plenty of air. When you want to check it, you shut off the air.

That same principle applies if your house takes fire inside. The fierceness with which it burns, and the extent to which it spreads, depend on the amount of air it has to feed it.

Now then, this fire I am going to tell you about was in a three-story brick residence. The front door led into a foyer hall, from which a staircase wound upward to the second and third floors. Back of this hall was the dining-room.

It was the maid's duty, in the morning, to prepare coffee and to take it up-stairs to the bedroom occupied by her employer and his wife. This bedroom was on the second floor at the rear. The coffee was prepared in a percolator which burned alcohol, and which stood on the dining-room table.

On the morning I speak of, the maid started the percolator, then went out to the kitchen. She evidently had put too much alcohol into the burner; and when, a little later, she came back to the dining-room, the blazing liquid had overflowed onto the table.

Usually, it is a dangerous thing for a woman to attempt to fight a fire, for her dress is likely to catch fire itself. If a chemical extinguisher had been handy, she might well have used that. Or she

No More Razor Blades To Buy!

365 Keen Shaves A Year With One Single Blade
"I want to say that KRISS-KROSS Stropper is the best thing I ever saw. I have been using one blade continuously for one year and nine months and have no idea how much longer it will last."
C. S. Stephenson, Okla.

Inventor Discovers Amazing New Way to Shave!

KEEN, velvety shaves forever and no more blades to buy!

No wonder KRISS-KROSS has revolutionized shaving traditions! It is so sensational that it seems hardly fair to call it a stropper. Rather it is a *super*-stropper or blade-*rejuvenator!* Produces unbelievable sharpness and prolongs the life of any blade for months and even years. Actually—you can take a blade right out of a fresh package and improve it beyond belief in eleven seconds with KRISS-KROSS!

This surprising invention utilizes the famous *diagonal stroke*, same as a master barber uses. Strops from *heavy* to *light*. Adjustable, automatic jig flies up and notifies you when your blade is ready—*ready with the keenest cutting-edge that steel can take!*

Sensational Free Offer

And now for my surprising offer. To introduce KRISS-KROSS, I am giving with it Free a new kind of razor. Possesses remarkable features. Instantly adjustable 3-ways. Gives a *sliding* instead of *pulling* stroke. Simply zips right through the toughest crop of whiskers. . . . This generous offer is limited. Send for details and information on amazing KRISS-KROSS inventions today. They are even more remarkable than I can tell you in this short space. Clip the coupon now!

AGENTS! Make big money with KRISS-KROSS.—$75 to $200 a week. Emil Ham made $50 his very first day. J. C. Kellogg made $200 in 7 days spare time. Others are making $6-$12 extra a day showing KRISS-KROSS to friends, etc. We show you how. Send coupon for details. Check bottom line and mail at once

18 BIG-PAY Selling Fields NEED MEN!

From 18 major selling fields comes the call for more and more N. S. T. A. trained salesmen able to hold down big pay jobs—not to mention the hundreds of other lines demanding salesmen. Last year alone this association received requests from employers for 51,054 salesmen trained by our result-securing home study method. It takes only a short time to master the secrets that others use to earn $5,000 to $10,000 a year!

FREE BOOK Shows How You Can Quickly Qualify

Wm. Shore of California was a cow boy when he sent for this amazing FREE book, *Modern Salesmanship.* Now he is a star salesman making as high as $525 in a single week! O. D. Oliver of Oklahoma read it and jumped from $200 a month to $1,000 a week! This astonishing book tells exactly how the big money in selling is made, points out the unlimited opportunities in this highest-paid profession, and outlines a simple plan which will enable you to step into the selling field. FREE Employment Service guarantee—51,054 jobs for salesmen last year. Send postcard for your free copy today. No obligation.

Are You Ever Ashamed of Your English?

DO YOU say "who" when you should say "whom"? Do you say "between you and I" instead of "between you and me"? Do you mispronounce common words in your speech or use them incorrectly when you write?

Many a man has been held down all his life and suffered untold embarrassment because of mistakes in English.

You do not need to make these mistakes any longer. Right at home, in the privacy of your own room, you can make up the education you missed in the days that you should have been at school.

The International School of English will teach you, just as it has taught thousands of other men and women, by a simple new method which shows you instinctively which word to use and how to use it.

American Landscape School 72, Newark, New York

might have thrown a rug, or a blanket, over the blaze, and then beat it down.

Instead, she threw open the dining-room window, picked up the blazing percolator, carried it to the window, and threw it out.

Possibly that was plucky, but it was also foolish. The marvel is that her dress was not set on fire. Moreover, the blazing alcohol dripped all the way from the table to the window, and before she knew what had happened, the rug and the curtains were in flames.

WHEN she saw this, the maid dashed from the room, *leaving the window open*, ran out of the front door, *leaving the door also open*, and stood on the porch screaming for help.

It was a blustery March morning; and the opened door and window made a fine draft! The consequence was that when the maid tried to go back into the house, intending to rouse the people sleeping on the upper floors, the flames had come roaring out into the foyer hall and she was driven back.

When the master and the mistress of the house awoke to their danger, the up-stairs hall was in flames. They ran through a passage which connected their room with a library at the front of that floor. There they opened a door into the hall to see if they could escape that way. This also was impossible. So, *leaving that door open*, they rushed to a front window in the library, *opened it*, and leaned out, calling for help.

Meanwhile, the wife's mother, whose bedroom was on the third floor, above the library, opened her door into the hall on that floor. She found herself cut off by the flames. So she too, leaving her door open, ran to the window and opened that!

Thus, every one of these people did the very thing which fed the fire and helped it to spread rapidly.

The stairway ended at the third floor. Consequently, the flames shot through the open door into the mother's bedroom, drawn in by the draft created by the open window. Terrified by this burst of fire, she climbed to the window sill and jumped. Her daughter, at the window below, saw her mother fall; and she also jumped. Both women were killed. A few minutes later, the fire apparatus arrived, and the husband was easily rescued.

That house was wrecked, and those two lives were lost, because of a fire which never should have got outside the room where it started.

Even though the first fatal mistakes were made, the people up-stairs would have been saved, and the damage to the house would have been far less, if the same mistakes had not been repeated on the upper floors.

Let me tell you of another case which shows the reverse side of the picture:

The time was midnight. The scene was an old-fashioned mansion which had been turned into a boarding-house. Starting in the cellar—oh, you cellars!—the fire shot up through the central hallway to the top floor. There, as so often happens, it "mushroomed" out in all directions.

The men of one company put ladders up to the windows and began the work of rescuing the people on the upper floors, while the rest of us attacked the fire itself.

After we had got the fire out, I took my lantern and went up to the third floor, which had been badly burned. I had gone down a corridor leading from the central hall, when I heard a noise behind me. I turned quickly and, in the dim light from my lantern, I saw a charred door being pushed open.

The next moment, a lovely old lady with silvery hair appeared. I give you my word I thought it was a ghost, until she very calmly inquired, "Is everything all right?"

When I found my own voice, I exclaimed, "Good lord! Have you been here all the time?"

As a matter of fact, she had! Her room was at the far end of a wing, and in the excitement none of the other boarders had realized that she was not among the rescued. She told me that when she opened the door into the corridor, she found it so full of smoke that she was almost overcome by it.

"I prayed for help," she said very simply, "and God told me to crawl along the floor, go into the trunk-room which opens off the corridor, and close the door."

It was from this trunk-room that she had appeared when I came along. She had stayed there all the time, quietly praying.

"Wasn't it hot?" I asked.

"A little," she said, smiling.

Now, whether or not you believe that God advised her to take refuge in the trunk-room, it is a fact that it was about the best thing she could have done under the circumstances. The room had no windows. The fire could not get in except by burning its way in. The open doors and windows in the other rooms created drafts which drew the flames into those rooms. And fortunately the fire was controlled and put out before it had burned through into her place of refuge.

To show you how fire follows these drafts of air, let me tell you what happened on the ground floor of this same house. At the left of the central hall was a small reception-room. On the right was a large living-room. The reception-room door was open; the door of the living-room was closed.

The fire burned from the cellar up into the central hall and then shot up the open stairways to the other floors. It also went in through the open door of the reception-room and burned it out very badly. But no fire got into the living-room! The closed door kept it out, although the door itself became so completely charred that parts of it crumbled at my touch.

PEOPLE do some very queer things at fires. They seem to lose their wits entirely.

One cold winter night we had to fight a roof fire at the home of a college professor. In hurrying around to the rear of the house, I stumbled over an object which proved to be a large square cake of ice. I didn't stop to speculate as to how it came there, but the mystery was explained later:

A neighbor had seen the blaze on their roof and had immediately informed the professor by telephone. In great excitement he told his wife. She had what seems

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

to be the common impulse in such an emergency—the impulse to save some of their belongings. Incredible as it sounds, she made a frenzied dash to the ice box and threw the ice out of the window!

Fortunately, we put out the fire before it did much damage. And later, when the professor's wife was serving us some hot coffee, her husband begin kidding her about the ice episode.

"You needn't make fun of me!" she retorted. "What did *you* do?"

Whereupon, the professor admitted that the first thing he did was to chuck out of the window his old-fashioned student's lamp—lighted!

This impulse to save something is, as I said before, a very common one; and in many cases it results in just as foolish acts as the professor and his wife were guilty of.

I SHOULD like to give you two bits of advice in this connection: First, make up your mind *in advance* what you most want to save, if you ever have to meet that crisis. Have this firmly fixed in your mind. And whatever your special treasure is, keep it where you can quickly lay your hands on it.

But my second piece of advice is this: When an incipient fire is discovered, the first thing to do is to summon the fire department; the next thing is to try to put out the fire. Don't start to save your belongings, unless you can do *nothing else*. If the fire reaches the point where you are forced to escape, take your most prized possession with you, if you have time. But don't risk your life, as people sometimes do, trying to save your belongings.

Let me sum up what I have been telling you:

See that your house is not a fire trap because of faults in construction.

Don't invite a conflagration by accumulating a lot of inflammable trash.

Don't throw matches into waste baskets.

Have fireproof roofs, if possible.

Keep your roof gutters clear of dry leaves.

Watch any bonfires near your house.

Have a good chemical extinguisher on hand.

In case of fire, telephone the alarm.

Keep doors and windows closed.

See that everyone in the house is informed of the danger.

Before you attempt to rescue your belongings, try to put out the fire.

No matter how hot the fire is, keep cool yourself.

WAR canoes full of Dyak headhunters, the steady beat of Voodoo drums in dense tropical forests, the star-lit deserts of Persia—these were the day-dreams of a young man sorely afflicted with a bad case of wanderlust. Then, when Eugene Wright could resist the call of adventure no longer, he broke with convention and civilization, shipped as a common sailor to India and—but read the personal narrative of his wonderful journeyings and adventures next month, "For One Whole Year the World Was Mine." Youth went boldly where its elders feared to tread, and was served a thrilling dish.

Just

"making the motions"

a victim of cachexia (run down condition)

How often you have noticed people with that weary, run down appearance? How often you yourself have gone about your work feeling all in, "just making the motions"—a victim of cachexia (run down condition)?

Whether this deadening feeling is due to chronic indigestion, constipation, deficiency of vital food factors or blood disorders (as evidenced by boils and pimples) it almost invariably responds at once to the use of pure yeast.

For yeast is the great conditioner and regulator. It puts pep in tired bodies; it lends new strength and energy!

Eat yeast and eat it in a form you'll like—Yeast Foam Tablets. These little pellets are pure; they keep; they come in handy 5c packets or in large 10-day treatment for 50c. Most folks chew them, but they're just as good if swallowed whole.

Do You Know Your Own Dog?

HIS heart is in your keeping—*his health and life too!* For his sake read Dr. H. Clay Glover's famous book, "Your Dog." Tells how to feed. Explains all common diseases, giving symptoms and proper home treatments. Mailed free if you write to: H. Clay Glover Co., Inc., Dept. A, 119 Fifth Ave., New York, N. Y.

Health, Not Pedigree, Determines the Best Dog

THE greatest enemy to dog's health is worms. Most dogs of all ages and breeds suffer from them. They spoil the dog's disposition, injure his appearance, sap his energy and frequently endanger his life. Ask any real dog expert. He will confirm this.

This parasitic disease infests blue ribbon dogs and mongrels alike. It breeds bad temper and leads to distemper, fits and other fatal diseases. Yet the symptoms are plain to see and the remedy easy to get and to give.

For prevention and remedy of worms leading dog fanciers, breeders and kennel owners use and prescribe Glover's Worm Capsules or the liquid, Glover's Vermifuge. All puppies need this medical treatment monthly and older dogs *regularly* four times a year. Entirely safe for all breeds.

Sold by Drug Stores Pet Shops and Kennels

If you want to keep your dog healthy and happy be sure of the quality of the medicines you give him. Insist on Glover's. Their tested formulas insure utmost safety and efficacy. The few listed below are most frequently needed.

GLOVER'S IMPERIAL DOG MEDICINES

Glover's Worm Capsules	65c
Glover's Vermifuge	65c
Glover's Distemper Medicine	$1.25
Glover's Mange Medicine	65c
Glover's Condition Pills	65c
Glover's Digestive Pills	65c
Glover's Laxative Pills	65c
Glover's Fit Medicine	65c

for fleas

Dogs and their owners alike will welcome this perfect flea soap. It not only does away with fleas, but keeps the dog's coat and skin in the finest condition of health. 25 cents a cake.

GLOVER'S KENNEL & FLEA SOAP

The Kind of Story I Like Best

FIRST PRIZE

Love Stories Keep Romance Alive in My Heart

I AM an average American wife. I rise early and toil late, for I have five children. Every day it is the same old story—clocks to wind, dishes to wash, socks to darn, floors to sweep, beds to make.

My husband is an average American husband. He rises at seven and toils till six, for he has five husky children to feed. He breakfasts in haste, runs for his car, works all day, and returns at night too tired for anything but a big arm chair, his slippers, and his pipe. He is too tired to talk.

Ours is an American problem. Though tired in body, *my* mind is alert, and my imagination keen. Words of love and cheer from my husband after the day's tasks are done would be nectar to my soul. But my lord and master snores in his stocking feet.

So I turn to my magazine—I have no time for novels. I turn to a romantic title under which is stated simply, "A Love Story." Children and husband and aching limbs fade away, and I am instantly transported into the land of make-believe. I am the heroine of the story.

Romance is more necessary to a woman's soul than bread to her body. A poor tired husband seldom realizes this, but every wife will know what I mean. Romance never dies in a feminine heart.

So, of all stories, I like love stories best. They feed my imagination as food does my body. Under the spell of them, my cares slip away and I am young again. I can lie down at night with a lighter heart and a brighter outlook on life, for it is indeed "love that makes the world go 'round."

W. E. B.

SECOND PRIZE

I Want Adventure Stories—I'm Sick of Reality

I LIKE stories of freedom, written by the few who are free for the many who are not—stories of the mythical beings who inhabit those spaces commonly referred to as wide open—where there are no desks, no jangling telephones, no trial balances; where time is a casual thing not symbolized by a "9" and a "5," but by a large, round "o."

The men who stride through the stories I like best were never seen on land or sea: the women—delightful, breezy creatures, always being plucked out of snow drifts or stumbled upon on desert islands—are equally improbable. That's all right. I've lived with reality all the years of my life. It's dull. It's deadly. I'm sick of it.

Reason tells me that no one man ever possessed the combined qualities of Don Juan, Sir Galahad, Little Lord Fauntleroy, and Hans of Iceland, together with straight legs and a whimsical smile; but if he swears under his breath when the coffee boils over; if he whistles the "Star-Spangled Banner" out of tune as he performs his morning ablutions; if he makes any sort of contact at all with commonplaceness, I accept him and his amazing adventures without question.

Through him I can taste the joys and sorrows and thrills that might have been mine if I'd pulled the other string when I had my chance at the grab-bag of life. I can be weary, whose shoulders have never sagged beneath the weight of pack or fresh-killed meat, whose arms have never swung a machete through tangled, steaming underbrush, or balanced a canoe overhead on long portages; whose legs have never carried me mile after gleaming mile behind a sled drawn by savage, swift-footed huskies.

Once I climbed a mountain while the glory of the morning surged and crashed all about me; once I rode a spotted pony through a night of black darkness, wind, and beating rain; once, as I stood on the prow of a lurching boat, I felt the sting of spray on my face, tasted salt on my lips. All of us have had our high moments. Most of us have had to come down from them sooner or later. The story I like best must stop, mercifully, just short of Monday morning.

C. McR.

THIRD PRIZE

"Love Mixed with Murder" for Mine

IT MAY be that I am suffering from one of the various complexes which are so popular, or it may be that in some previous period of existence I was a female Sherlock Holmes. Be all this as it may, the fact remains that I have a hobby amounting almost to a mania for detective stories. I am referring to that kind which used to be classified as "love mixed with murder."

I want action right from the start. The butler finds his master stabbed to death in the library—or the heart, depending on the writer's point of view. Some two or three dozen persons are very plausible suspects, each having an excellent motive for wanting the old gentleman out of the way. By the process of elimination, the brilliant detective fastens the crime on the sweetheart of the murdered man's beautiful niece, and that young man in turn, by a clever bit of amateur sleuthing, brings the guilty man before the bar of justice. Of course this is the barest outline, and can be made more thrilling by the insertion of three or four more murders in the process of locating the criminal. When I am reading a good detective story—one that exactly suits my taste—I begin to feel guilty myself, and glance over my shoulder to make sure no uniformed individual is bearing down upon me.

I think it may be sheer admiration for the manner in which the plots of my favorite detective stories have been handled which causes them to hold such strong attraction for me. At any rate, I'll toss aside anything in the line of literature to read one any time.

M. B. M.

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

Old Hawk Eye

(*Continued from page 23*)

other appraisingly, and Mr. Harrison suppressed a smile, because now he knew why the children and others who had directed him toward this house referred to its owner as "Old Hawk Eye."

"We will get to business," said his host: "I have purchased the hotel here. You, of course, have seen it. It is a beautiful building, and was once quite important, almost famous; this is a very old town, Mr. Harrison. Now, with automobiles, and a big city near by, a hotel with fifty rooms can't live. I bought it very cheap, so we can make improvements. I have definite ideas about what I want to do with it. If you agree, you manage it; otherwise, not. You noticed that a large garden has already been planted. Near there is a model dairy in which I am a partner, and back of that a chicken farm in which I am interested. The hotel can be supplied to the king's taste. I purpose to advertise it as a beautiful, sleepy old place in which to rest; heavy accent on no music, no golf, practically nothing going on in the town, a mossy old place on the river bank, where people can doze, and get anything in the world they want to eat. What do you think of the idea?"

"It might succeed, Mr. Baker, with a very efficient staff. I hope you don't want to employ a lot of local people."

"At first none at all except in the most menial places; work them in gradually, Harrison, very gradually. Make them learn first. I want to make money out of this. No foolishness. But there is an opportunity, with such a small investment, to show a good profit. If the idea succeeds we can expand, or you can buy me out and expand later. Anyway, go ahead, Harrison. That's all. Good day."

And so Harrison went ahead, wondering, as he expended energy lavishly, if anything would come of it.

TWO weeks passed. One afternoon Old Hawk Eye sat on his wide veranda enjoying the breeze that came fitfully through the vines, and looking down on Riverdale, where trouble was brewing. Presently the tall form of Professor Holman, principal of the local high school, appeared on the steps.

"See you're making a baseball diamond," he announced. "Came to get permission for the boys to use it."

"How much would you pay?"

"How's that?" asked the principal.

"How much would you pay?"

"Well, we haven't any funds, Mr. Baker."

"Then I can't do anything for you."

"But I thought you were interested in the school."

"No. I am not interested."

"Why, Mr. Baker, you astonish me! I was told that you put up nearly two hundred dollars for the printing of our high-school annual."

"I did. That was a business matter. I wanted to see what West could do. I am not interested in the school."

"But you ought to be interested. The school does great things for our town—"

So lustrous—so smooth!

A damp cloth keeps it spotless

Ordinary Flat Finish White Paint

Barreled Sunlight Gloss Finish

The microscope shows the difference!

These photographs of paint surfaces were made through a powerful microscope. The astonishing contrast shows why Barreled Sunlight is so easy to keepclean. Smooth, unbroken and non-porous, it resists dirt and washes like tile.

WHAT happens to ordinary interior paint? It gets hopelessly dirty. Hard scrubbing may remove the dirt, but it also wears away the paint. Repainting is soon necessary.

The wide popularity of Barreled Sunlight has been won by its satin-smooth surface that washes easily like tile, and is so durable that washing cannot injure it!

A finish so handsome, moreover, that it replaces the finest enamel—at a lower cost and with fewer coats.

Guaranteed to remain white longest.

Any tint can be obtained by mixing oil colors with Barreled Sunlight. Ask your dealer about the new, easy-mixing Barreled Sunlight Tinting Colors in handy tubes.

Quantity for quantity, Barreled Sunlight covers a larger area. And the extreme ease of applying it by brush or spray saves many labor-hours.

In Gloss, Semi-Gloss, and Flat finishes. Cans and drums. Where more than one coat is required, apply Barreled Sunlight Undercoat first.

U. S. Gutta Percha Paint Co., K-22, Dudley Street, Providence, R. I. Branches: New York—Philadelphia—Chicago—San Francisco. Distributors in all principal cities. More than 7000 retail dealers.

Do your children bring their friends home?

IS yours the home where the young folks like to have their parties? Are *you* as proud of it as you should be? If you could look at your home through the eyes of youth, would you see beauty, charm, distinction? There may have been a time when distance from large centers justified out-of-date or shabby home furnishings. But, to-day,

Peck & Hills *and your* Neighborhood Dealer

bring the world's fine furniture and floor coverings to you. To make your selection, visit our nearest wholesale display, with a Card of Introduction signed by your local furniture dealer. If you cannot visit these beautiful displays, choose from our catalog at your dealer's store. Either way, the Peck & Hills Plan guarantees quality and enables your dealer to offer you real money-saving opportunities.

If dealer cannot supply Card, or show Catalog, write for names of nearest dealers who can. Address house nearest you—*Peck & Hills Furniture Company, Boston, New York, Philadelphia, Chicago, Denver, Los Angeles, San Francisco, Oakland, Portland, Tacoma, Spokane, Seattle.*

Wholesale Furniture and Floor Coverings. We sell and deliver through retail dealers only.

FREE BOOKLET explains care of home furnishings and money-saving plan. Write for Booklet A.11

The Peck & Hills oval sign on your dealer's window is added assurance of service and satisfaction.

COAST TO COAST SERVICE

"Does it?"

"Twenty-four boys and girls from our high school are now in universities," Professor Holman announced proudly.

"About three of them will come back," was the sudden response.

Then Old Hawk Eye said calmly: "Something is the matter. I don't know what it is. You don't know what it is. We can't change it. But something is the matter. We work to send our best people away. We don't mean to, but we do it. And then we ask each other why they go. How can they help it? They are forced out.

"There was my boy, Tom. You were proud of him, you said. At the state university it was the same. Now he is in New York City. And we need him here. Cities are built by such men as Tom. But he goes, and the Third Ward stays. If the whole Third Ward went it would be no loss. But they don't go anywhere. The school is all right. It is a good school. We must have it. I pay my taxes. But I am not interested."

Professor Holman thought it better to return to his original mission.

"What are you going to do with the baseball diamond?" he asked.

"It is leased to the Third Ward Athletic and Literary Society."

FIFTEEN minutes later Professor Holman was walking along Main Street, when he met the Reverend Mr. Biddle. Half an hour later Old Hawk Eye received another caller.

"Honestly," the clergyman said, with a good-natured smile, "I don't know what to make of you, Mr. Baker." Old Hawk Eye turned his head to one side and looked at his guest with the expressionless face of a bird.

"I wonder," he continued, "if you knew that we were just about to sue for injunctions against the Third Ward Athletic and Literary Society, and that other one, four or five blocks away."

"On what grounds?"

"We went to a great deal of trouble," the clergyman explained, "to get an ordinance passed prohibiting pool halls, because they are loafing places that breed evil. No sooner was it passed than these two establishments became clubs to evade the law. They are neither literary nor athletic, so we got evidence to prove that fact, and now you lease one of them a baseball park. Don't you see what that will do to our case?"

"They want to play baseball," Old Hawk Eye said. "They must want to. They are paying for the privilege."

"I venture to say that they will not play, though, Mr. Baker."

"They've got to. It's in the contract. They've got to charge admission. Not less than ten cents. I get a flat sum and percentage. I expect to make money out of this. They'll play baseball."

"Why did you charge them for the use of the grounds? Couldn't you afford to give it to them?"

"I never give anybody anything."

"Honestly, I don't know what to make of you, Mr. Baker. Does it really give you pleasure to fight our efforts?"

"I don't fight you."

"Well, most assuredly you don't join us. May I ask why?"

"I don't like you."

"Don't you think that we accomplish any good?"

"Some. I think you do some good."

"Even if you grant us just that, shouldn't you join us?"

"No. I don't like you. I see things differently. The way you do good I don't like, even when it is good."

"Just what, in your opinion, is the nature of our error, Mr. Baker? I ask respectfully and sincerely."

"You think too much about helping weak people. I don't like them, and I don't care what happens to them."

"But we are commanded to help the weak," said the clergyman.

"I know it," Old Hawk Eye agreed. "It's all right. Go ahead. I see things differently. I am always afraid a *strong* one will sink before I can get to him."

"I think I am becoming better acquainted with you, Mr. Baker. You have opinions on the subject of how to do good. Evidently then, you try to carry some of them into effect."

Old Hawk Eye turned his head a little more to one side, and searched the countenance of his guest. No one had ever brought the charge against him of trying to do good. He was thinking rapidly; perhaps on the verge of a confidence. Then he reached a conclusion, and snapped out curtly, "No. I do not try to do good. I am in business for money!"

"I'm sorry to hear that. It means that we must for a time be enemies. I'm going to fight you and pray for you. Somehow, I can't quite rid myself of the idea that we ought to be friends. If you would only take advice, we might work together."

"I wouldn't take advice."

"Well then, Mr. Baker, assuming that you have your own plan in mind with reference to the Third Ward, could I help you?"

"No."

"Do you want a little time for your plan before I begin fighting you?"

"No. Your fight will not make any difference one way or the other."

The Reverend Mr. Biddle flushed angrily for a second, then recovered his composure and smiled confidently.

"You think not?" he asked.

"I'm sure of it," Old Hawk Eye replied, and the interview was at a close.

THE Reverend Mr. Biddle rose slowly and hesitantly, dissatisfied with himself and the results of his visit. His host also rose, and for a moment the clergyman thought they were to shake hands, but Old Hawk Eye was merely using his hand as a sun shade.

"Your right eye is somewhat inflamed," the minister remarked.

"Yes. There is a cancer back there. It is getting worse."

"My dear man, you speak of it as though it were a mosquito bite!"

"It is like one; there is nothing I can do about it. Good day."

All the way down the graveled walks the Reverend Mr. Biddle felt that he wanted to return and begin the interview all over again.

In the library Old Hawk Eye was telephoning to his attorney.

"Don't fight any ordinances they propose to the council," he said. "Let them go ahead. And then get injunctions.

150 Pounds Pressure **CRANE VALVES** 2500 Pounds Pressure

Gas booster pumping station of the SINCLAIR OIL & GAS CO., *Garber, Okla.* CRANE *valves and fittings used throughout; chosen for their standard of quality, characteristic of all* CRANE *products down to the humble sink faucet.*

The battle of Benninghoff Run

Through the sucking mud of Oil Creek valley, primitive tank wagons by the thousand slithered, sank hub deep, creaked on unendingly. It was 1865, and oil was on the move from the wells to the refineries.

Looking at the straining horses, mules, and oxen, in that Pennsylvania quagmire, a dreamer visioned a more practical, economical way to transport oil. Why not, he reasoned, send it through pipes like water?

The completion of his first pipe-line, from Benninghoff Run to Shaffer, marked an uprising of thousands of teamsters whose livelihood it threatened. They overpowered the lines' defenders, burned down the storage tanks, tore up the pipes.

But they could not destroy the power of that "new-fangled idea." It was rooted too deeply in economic necessity. Today, these arteries of the oil industry are over 85,000 miles long. Through forest and swamp, hanging from canyon walls, over hills and under rivers, they carry 2,000,000 barrels of crude oil daily. And another 161,800 miles of pipe-lines, aided by booster stations, convey many billion cubic feet of natural and manufactured gas.

From the very beginning, Crane has supplied valves, fittings, and piping materials, for every requirement of the oil and gas industries.

"AND HE LEFT HER WITHOUT INSURANCE, TOO"

OF course, he didn't *leave* her. He *went*—before the day arrived on which he had planned to take insurance. He thought the calendar might wait—he never really *intended* to leave her without insurance. He simply was so full of living that he couldn't believe he might *stop* living—before he could sign a life insurance application blank on the dotted line.

SUGGESTION TO WIVES
Why not place this advertisement where your husband will be sure to see it?

And so, over the teacups, friends, neighbors and acquaintances think of him, discuss him. And, always, there's the same ending: "And he left her without insurance, too."

Don't put off until tomorrow the life insurance you should buy today. Send for your free copy of booklet, "Seven Keys to Contentment," that makes it extremely easy for you to check your insurance needs. It will help you in planning your insurance program.

"Provide through Provident"

Provident Mutual

Life Insurance Company of Philadelphia, Penna.

Founded 1865

©P.M.L.I.Co. 1927

We may lose some of the cases here; but we can make bond and appeal. Keep them busy, Charlie; keep them busy. They're all right. Pretty nice fellow, that Biddle." At the other end of the wire Charlie laughed merrily, and said, "All right. Nothing much will come of it except that you'll be more unpopular."

"That," said Old Hawk Eye, "would be interesting." A few minutes later he was talking to Leonard West, also over the telephone.

"Give them coöperation, West," he was saying. "They're about the best people in town, and you can't afford not to. We've got money tied up in that plant, so act wisely and look out for our interests. How's business?"

"Fine," replied West.

So the fight was launched for the uplift of the Third Ward, and right merrily it proceeded, week after week, for two months. Then came the ordinances making numerous requirements of landlords in connection with rented houses; also, ordinances were introduced fixing new proportions of the cost of public improvements that a property owner would have to pay, in the event of his owning a certain high percentage of the property on the streets in question—a percentage that let everyone except William Baker through the net. Some of the ordinances failed of adoption, and injunctions came close on the heels of the others.

MEANWHILE, the Third Ward Athletic and Literary Society flourished as never before. Every Saturday afternoon its baseball nine contested with the champions of the Black Cat Literary and Athletic Society for glory and dimes before an audience of about three hundred persons. Both teams were becoming famous. In his little shop, Leonard West was experiencing the thrill of triumph, for business was coming to him from the tallest office buildings of a city of two hundred thousand population.

Over on the other side of the town, Riverdale Manor was slowly but surely being filled with paying guests, and George Harrison took counsel with himself to the general effect that fifty rooms constituted a very small hotel. There was plenty of space for an addition.

But probably the happiest of all the men interested in Old Hawk Eye's assortment of ventures was Leonard West, for in his own craft he was an artist, and now, for the first time in many years, he had tools with which to work. It was his privilege one day to conduct a little round baldheaded man up the stone steps leading to the wide veranda on which Old Hawk Eye so frequently spent his afternoons.

"Mr. Baker," he said proudly, "I want to present Mr. Robert Court. He is the biggest printer in this state. Now I will leave you two to talk business. I've got to hurry back."

"I've been looking at that old factory building," Mr. Court announced. "You were right. It is just about what I want. I'm ready now to expand my plant, and I'm going to put one part of it here. I've kept in touch with West, and you're right on those figures. He accomplishes rather remarkable economies. I think the idea is sound. He tells me that you have quite a number of available houses near that

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

factory. I'll bring about seventy men here at the start. I don't like the looks of thehouses at all; but that can be remedied. However, there ought to be ten or twelve really nice ones just as soon as they can be built, if you and I can close a deal."

"We'll close it," said old Hawk Eye; and before sunset the papers were signed.

"There are a lot of bright boys living in that neighborhood," Old Hawk Eye remarked, as he put up his fountain pen. "West informed you correctly on that point. And I think those boys would like to work for you. They're old native stock, you know; not as adventurous as immigrants." Old Hawk Eye glanced sourly in the direction of the celery bed, while Mr. Court smiled.

"Well, there's at least something in what you say," he commented. "Yes, I'll use quite a number of those boys."

"It will not be at all difficult," Old Hawk Eye continued, "to make an entirely different-looking neighborhood over there. Bright paint is the thing you missed, and there's plenty of it for sale. Keep in touch with me. I want this move of yours to be a big success. I own other land over that way. I expect to make money out of it. Good day, sir."

"Good day, Mr. Baker."

Old Hawk Eye went inside and telephoned to Leonard West.

"You can print the story now," he said. "We signed up."

"That's fine," the editor commented. "How's business?"

"Booming. Mr. Court's plant won't hurt us. In fact, it may help."

"That's what I thought, West. Good night."

WHEN the Reverend Mr. Biddle called at the mansion on the hillside on the following afternoon he carried a copy of the Riverdale "Reporter" containing Leonard West's account of the new enterprise.

"It looks," he said, with a smile, "as though you and I had been fighting windmills."

"Yes?" queried Old Hawk Eye.

"A great many problems are settled by the sudden intrusion of new and unforeseen circumstances, I suppose," the clergyman continued. Old Hawk Eye stared at him. Finally, he asked, "Do you think this one is settled?"

"Don't you?" Mr. Biddle countered.

"I do," was the prompt reply; "but I didn't think you would."

"Why not, Mr. Baker?"

"Well, rents will eventually go up, and the newcomers will crowd out most of the present tenants. They will still be just about the same kind of people, and many of them will still be living in sorry-looking houses."

"That's true, Mr. Baker. What should we do about it?"

"I do all I can."

"But I thought, Mr. Baker, that it was your avowed policy to do nothing."

"It is!" Old Hawk Eye snapped, trying to recover his ground after an admission that now astounded him.

"I wish we could be friends," the clergyman mused aloud. "I can't understand why we are not friends."

"What you don't understand," said Old Hawk Eye, "is that we *are* friends."

"Then why don't we work together?"

Before you lather up
—TRY THIS—

TO EVERY MAN with a stiff beard, the morning shave is a major operation! The secret of a quick, smooth shave lies in softening that stubble first. *Here's a sure and easy way to do it.*

1 Apply Hinds Cream generously to the beard before you lather up or wet the face. Rub it in vigorously for two or three seconds.

2 Make your lather from your regular soap right over the Hinds Cream while it is still wet. Do not rub it in; it's not necessary. You save that time.

3 After shaving, rub in a little more Hinds Cream when the skin is dried. You'll find your skin wonderfully soft, relaxed and well groomed for the day.

YOU will never know the meaning of a comfortable shave until you have tried this simple method. Men who have tried it are insisting on having their *personal* bottles of Hinds Cream beside soap and razor each morning.

A photograph of a mid-western home painted with 40-40-20

"What an Attractive House!"

40-40-20 Paint

Keeps it Looking that Way

THE most noticeable thing about a house is its color. Do you know that both the original color of the tint and its stability depend upon the natural and permanent whiteness of the pigments from which the paint is made? This is true of gray, cream, yellow, or other tints used for exterior painting.

A tint made on a base not truly white lacks clearness and brightness in the beginning—it looks "muddy." And as time passes, any such deviation from whiteness in the base pigments changes the shade of the tint.

The pigments used in **40-40-20 paint** are all truly and permanently white. The **40-40-20** base is insurance that tints will be pure, clear and unchanging. If you wish to paint white, **40-40-20** gives a permanently white finish.

40-40-20 has been called the greatest advance in the science of exterior paint making in the last 100 years. Yet it costs no more than other quality paints.

Send for our free booklet and read the interesting story of 40-40-20 paint.

New Jersey Zinc

Genuine 40-40-20 is made from The New Jersey Zinc Company's specified products according to its specially developed formula, and the manufacturers are authorized to use its registered trade-mark on their labels for paint so made.

THE NEW JERSEY ZINC COMPANY
160 Front Street *New York City*

40-40-20
The Permanently White
OUTSIDE PAINT

"Because you do such silly things."

The Reverend Mr. Biddle laughed. "And you," he said, "do nothing."

"I have a job on which we can coöperate," Old Hawk Eye announced. "Listen to me, because this is your kind of job, not mine. I do all my work with other people's ability. I have confidence in you for this job; but you must understand it." The clergyman drew his chair nearer.

"YOU have broken through my guard, and you know it," Old Hawk Eye continued. "I fight you off, but you have an understanding heart. I am not long for this world, and no great harm will come now of speaking frankly. I love this little town beyond all words to express it. Here I spent my boyhood, courted my sweetheart and was married. Here my boy was born. His mother sleeps here. I want this town to be always beautiful and prosperous. Some years ago it began to crumble. Too many of our best people went away. So I began to patch it up. I sat up on this hill like the old hawk they say I am, and watched for men worth grabbing and keeping here.

"That's how it happens that I own a half-interest in everything, from chicken farms to a mattress factory. That's why I buy everything that fails, and give it another start. No man can hope to succeed in such a task if he doesn't make money. I made every cent I've got right here. If I give anything away, then I cripple myself for the main object in life. I'm not interested in mere population. I'm trying to win back or replace the people we lost. Only fine, strong men and women make beautiful, happy towns, Mr. Biddle. I have come to hate weak people and paupers. It's wrong, I suppose, but I can't help it. I saw them letting my town die.

"No good will come of begging people not to go to the cities. We must make the towns more desirable. If we can't, then we ought to die. Nature works that way. My interests are now spread like a net, touching almost every enterprise we have. I want my son to come back and work with me for a while so that he can carry on—later. We need him. I wrote him a letter, but I couldn't mail it. You see, I've always been 'Old Hawk Eye,' and it's hard to drop the pose. Old Hawk Eye can't say things like this, even to his own boy. A man like me, Biddle, doesn't mind being Old Hawk Eye; it comes easy. We recognize envy as flattery. And we don't explain. But now I've got to explain.

"I never have fought you. I knew those young rascals didn't intend to play baseball; but I made them do it and took a chance that they'd like it. Boys usually do. Mr. Court isn't an unforeseen circumstance. I've been planning that deal for a year. I've got to make this little town beautiful, because some day my boy might happen to drop in just for a visit, and if he liked it he might stay!"

The Reverend Mr. Biddle rose, his eyes blinded with tears. "I'll bring him," he said, "if I have to kidnap him!"

Old Hawk Eye stared at the tears as though puzzled. Then he said, "Yes; I have confidence in you. This is a matter of sentiment, and you understand such things. I do not."

The Biggest Battle Americans Ever Fought

(*Continued from page 50*)

more in reserve against our 150,000, and many of theirs were second- or third-rate troops, or worn by hard fighting elsewhere. In the first two days of battle the Germans could send to the Meuse-Argonne 72,000 more men, and on the third day 100,000. The German first line was strong, and had they made a fight there it would have been serious for us. Instead, they used the "elastic" defense, and made only fight enough to delay our approach to the Montfaucon Line.

At eleven-thirty the night of September 25th, our artillery preparation joined that of Gouraud's French along one hundred miles of front from Rheims to the Moselle, over 5,000 guns firing. Three hours later began our more intensive preparation for the infantry jump-off.

Only half these guns belonged to the American Army, and they were of French manufacture. The rest were loaned by the French, who thus, as General Pershing had suggested to Marshal Foch, made good our lack of artillery. We had 189 small tanks, of which Americans manned 142, French 47. We had no large tanks, although we needed them badly. We had 821 airplanes of all sorts, of which 641 belonged to the American, 180 to the French air service, though most of the planes were of French manufacture, and only 584 American-manned were available.

That morning of September 26th it seemed from the observation post on the Mort Homme hill that our new army, with all its improvisations, might duplicate its feat at St. Mihiel. Our artillery preparation seemed to have been devastating. The German artillery was almost silenced. Spread upon the hillsides were the olive drab dots and lines that we knew were patrols and platoons, companies and battalions. Eagerly we correspondents awaited the first American official *communique* on the battle.

THROUGHOUT the battle, the communiques set the pitch for the correspondents' dispatches. We could not tell of an attack, or the capture of a town—much less of a reverse—until after the communique had announced it, and often we must follow the communique's tone. Thus was morale kept up.

The American communiques were usually truthful, though sometimes they told only our side of the truth—if you get the idea. It was the truth, but not the whole truth. But the first Meuse-Argonne communique said that we had attacked the Germans on a twenty-mile front, penetrated to an average depth of seven miles and taken Montfaucon. About the only true statement, in fact, was that we had attacked on a twenty-mile front. We had penetrated the German lines to a *maximum* depth of barely seven miles at one place, an *average* depth of four, and had not captured Montfaucon. According to the communique, our almost unattainable

Old Briar

TOBACCO

"THE BEST PIPE SMOKE EVER MADE!"

"Old Briar Has Re-Converted Me to Pipe Smoking"...*

All of the old enjoyment, solace and solid comfort of pipe smoking.... that's what Old Briar Tobacco is bringing back to pipe smokers! Letters come from men everywhere, every day, telling of the pleasure and satisfaction that each pipeful of Old Briar gives them.

Light up your pipe filled with Old Briar Tobacco. Draw in the ripe fragrance and aroma of its superior leaf. Taste its full natural flavor. Smoke it awhile. Notice how cool and slow burning it is—and how smooth. Now you know why so many thousands of pipe smokers say Old Briar is "the best pipe smoke ever made."

It has taken years of scientific knowledge in the art of mellowing and blending and generations of tobacco culture to produce Old Briar Tobacco. Step by step Old Briar has been developed—step by step perfected. It all shows up in the smoke.

**The above tribute to Old Briar is all the more convincing because it was entirely unsolicited.*

Tiny Shaving Nicks

cause skin blemishes!

Your skin is safe from tiny dust and germ particles—*until you shave!*

Then, with even the cleanest of shaves, come invisible nicks of the razor that open the way to infections. Embarrassing skin blemishes result. Soap and water can't prevent them.

That is why particular men use Pinaud's Lilac to finish each shave. Lilac—a real antiseptic—protects even the invisible breaks in the skin. Distressing skin blemishes can't happen!

And nothing feels quite so refreshing, for Lilac first stimulates, then soothes, the skin. An improved process has made Lilac even blander than ever before.

Get Pinaud's Lilac at any drug or department store today. Look for Ed. Pinaud's signature in red on each bottle. Pinaud Incorporated, Paris, New York.

PINAUD'S LILAC

[*Lilas de France*]

main objective for the first day had been splendidly, wonderfully attained. The fact was, we had done well but were still considerably short of it. We would try for Montfaucon the more fiercely next day.

We were playing a game for big stakes, that faint hearts would not win. General Pershing, General Drum and the whole staff were pushing everywhere all that night, pushing foward the artillery, the supply trains, above all the engineers repairing the three roads that were all we had over shell-churned, ruined No Man's Land. That was a night of toil and strain.

The time lost had been precious. Next day the 79th captured Montfaucon; but the Germans had had time to get set to defend the Kriemhilde Line where we hoped to break it. They had manned its outpost positions with their local reserves, and Hindenburg and Ludendorff were responding to a hurry call with divisions from the general reserve. They had greatly increased their artillery.

LUDENDORFF admits a German reverse. Von Schwarte says that by night of the 26th the Germans had in some places nothing to stop us but machine-gun nests.

German local reserves were in action when we jumped off the next morning, and our progress was so much slower that the German communique could say:

"The great American and French attempt to break through, with its extensive objectives, failed on the first day of the battle, as result of the stubborn opposition of our troops. New battles are imminent."

That was good propaganda and, from the viewpoint of what we had attempted, fairly truthful. It was certainly truthful that new battles were imminent! By afternoon of the second day of the battle, after we had taken Montfaucon, our center was almost up with our flanks. In the Aire Valley the 28th and 35th still advanced, and things looked interesting.

But this side Varennes, several miles beyond the old front line, was a great mine crater. Traffic picked a crawling way around its edges, while engineers struggled to bridge the gap. Sweating, swearing men tugged at guns and wagons stuck in the mud. Ahead were the infantry sometimes short of food and ammunition, and of adequate artillery protection.

Still, in less than forty-eight hours, all divisional artillery, except a few heavy guns, had crossed No Man's Land and was firing in support of the infantry; but divisional artillery meant only 800 of the 2,700 guns that had opened the attack.

The Germans had brought up yet more artillery. They had lost only one hundred guns the first day, and the second had more in action than we. They blasted our infantry—attacking with slimmer barrage protection with, in places, ten times as many shells as the day before. We had passed their lightly-held outpost zone, and had run into deadly crossfire from the Argonne bluffs on the west and the Meuse heights on the east, that struck us front and flank. The German checkerboard machine-gun defense covered every square yard of ground.

By evening great bravery and sacrifice had given us some advance everywhere. The III Corps, without full artillery support, advanced a little over a mile with heavy casualties. The 79th and Fourth Divisions had advanced, but not to the Kriemhilde Line. The 28th and 35th divisions had done finely in the Aire Valley, but had not broken through. The Germans were throwing in fresh divisions and more artillery everywhere to stop us.

So, on the morning of the 28th, we made another great effort to pull ourselves together and break through. On the 27th of September the British had struck the first blow of the series that broke the Hindenburg Line. To-day, the 28th, Belgians, French and British were attacking in Flanders. To-morrow, the 29th, the British with the 27th and the 30th American Divisions would electrify the world by penetrating the Hindenburg Line at Cambrai and St. Quentin. The Germans were frantically trying, with divisions reduced by heavy losses and fatigue, to plug all these holes at once. The situation had infinite possibilities.

But our great effort on the 28th was not enough. The troops were tired. They had not had enough to eat, nor enough sleep, if any. Traffic was not entirely straightened out, artillery support not always adequate. It had rained the 27th; it rained harder the 28th. Also, too many Germans were fighting too well in this country "ideal for defensive fighting." They had 125,000 men in the front line now, supported by many more.

We had the Germans scared in the Aire Valley. On the 29th of the month, the 35th Division reached Exermont ravine, eight miles from the original jump-off. But then occurred one of the saddest incidents of the battle. Depleted, exhausted, they were hit by the fresh 52d German Division with a terrible fire that hurled them back.

For a time there was dangerous confusion, in some places almost panic, as the haggard infantry staggered to cover behind a new front line, some two miles to the rear, formed by the 110th Engineers, only 1,000 strong. One of the battle's finest achievements was their repulse with little but rifles, of a German counter-attack. The veteran First Division made a forced march across the rear of the whole army and relieved the worn-out 35th. There could be no more progress in the Aire Valley without more artillery, more trucks, and more animals, of which the corps had started short 7,000.

ON SEPTEMBER 30th General Pershing and the First Army Staff faced the fact that, for the time, we had struck a snag. Our first great attack had not been a failure by any means, but it had been stopped five miles short of its maximum objective, the Kriemhilde Line at Cunel and Romagne, and the Grandpré Gap. All nine attacking divisions had lost heavily, and not only the 35th, but the 37th, 79th and 91st were more or less disorganized and must be relieved. The experienced 32d and Third, Wisconsin and Michigan Guard, and Regulars, were doing this.

Our traffic and supply problem had been tremendously complicated by rain. Roads were softened, troops in the open without the snug trenches and dugouts of stationary warfare were drenched and chilled. Sick with flu, exhaustion, and unavoidable lack of hot food, they were coming to hospitals already heavily taxed.

Gouraud's French had stopped in Cham-

He's Got a BRAND-NEW Idea Selling Farm Implements

ALFRED ROSENBERG tells other merchants how he built up his big farm business

"FARMERS have been buying farm implements and machinery in tremendously increasing volume during the past ten years," says Alfred Rosenberg, former president of the Connecticut Hardware Association and the New England Implement Dealers' Association. "But they would have invested even more money in this time-saving and money-making equipment if we dealers had foreseen that *farm machinery must be merchandised* — just as any other line of special manufactured products must be sold today."

The hardware store that Mr. Rosenberg runs in Rockville, Connecticut, is the only one of its kind in New England. In fact, he says—and we believe it — that there are few dealers in the United States who sell farm implements as he does. For he has a brand-new idea—and it's one that other dealers can profitably use.

How He Does It—

Farm & Fireside is always interested in getting the selling methods of outstandingly successful dealers who serve a large volume of farm trade. By passing these tried and proven methods on, it renders an important service to other dealers who also depend on farm trade for a large part of their business.

For this reason, Farm & Fireside went to Mr. Rosenberg to get the story of the methods he has used to build up a business which now takes in an average of about $7,500 a month from farm trade alone.

PHOTO BY BACHRACH

DEALERS: *Send for your copy of Mr. Rosenberg's merchandising story*

This interview is now published in folder form, ready for free distribution. And any dealer who wants a copy can get it by sending in the attached coupon.

Information You Need

Every live dealer—no matter what he sells—likes to know what other successful dealers are doing to build sales these days. It pays to compare notes. For instance, you'd like to know Mr. Rosenberg's advertising methods — what he's found that pays the biggest profits.

Also, you're interested in knowing how he *merchandises* farm implements instead of merely offering them for sale — what he's doing to boom his paint business — and the big sales feature he puts on every Spring. These are a few of the things he tells about in his interview.

Farm & Fireside's Service to Small-City Retailers

This is another interview in Farm & Fireside's series — which makes available to retailers the tried and proven methods for building farm trade, as used by outstandingly successful merchants.

And this work is just a part of the service Farm & Fireside renders in meeting the obligations of leadership in the farm field.

As every dealer knows, the advertisements in this magazine are a real force in influencing 1,200,000 farm families to buy. And a glance through any issue immediately shows why this is so—for here is a hundred-per-cent-*personal* magazine — edited straight to the individual — and read with *warmer interest* than any other farm publication.

That's why dealers are finding it so profitable to feature and push products advertised in Farm & Fireside — and why manufacturers' advertising in this magazine shows such steady growth.

MAIL THIS

FARM & FIRESIDE

"A Personal Christmas Card *is a salute from friend to friend"*

says Admiral Bradley A. Fiske, noted Navy man, author and inventor, and for twelve years President of the Naval Institute.

"At home or away from home on foreign shores, the Christmas greeting that comes from a friend is a gallant thing—warming the heart as nothing else can."

Personal Christmas cards—that is, cards on which one's name has been engraved or printed—are recognized among people of good taste everywhere as the appropriate, the individual way to express one's greeting.

In the nearest good shop you will find sample books affording a choice of many styles and treatments—among them, cards that represent you worthily.

Buy your Christmas Cards early —and mail them early

Scatter Sunshine with Greeting Cards

pagne, after a smaller advance than ours. The German artillery was getting stronger, its crossfire more costly. Their machine-gun defense became deadlier, counter-attacks fiercer and more frequent. All the advantage of our surprise had worn off.

A prudent commander and staff must prepare to defend the new-won gains against a possible strong effort to retake them. For safety, engineers and labor troops were set quickly to work building a defensive line behind the new front.

A big difficulty on September 30th was that our equipment was being depleted. Half our artillery had been French to start with, and Marshal Foch needed some for other attacks. Tank losses were heavy and a few days later only 18 of 189 were fit for action. Of the 821 airplanes, we now had 641 available and some of the French were needed elsewhere.

Nine years afterward, it must seem to everyone, as it did then to those who knew the circumstances, that the wonder was, that the American had got as far as they had, had come as near to realizing all the optimistic hopes and plans.

If we had not done the most that had been hoped, we had done a lot; if we had not made the prodigious twelve-mile jump, we had gone eight. In the process we had dealt the Germans a terrible blow, the effect of which was felt along the whole Western Front. We had not broken the Kriemhilde Line, but we had got so close to it that we could shell it heavily, and the Germans feared our next jump would break it. On September 30th they had facing us more than twice as many men as four days before. We had taken 10,000 prisoners, over 100 guns. The Germans had weakened themselves elsewhere to meet the deadly menace of our attack at their most vital point.

The struggle up the slopes to the Kriemhilde Line, two to five miles from our new front line, would be terribly hard going. Could we do it in October and early November? If we could, the German army might still be crushed before winter. If we did not cut the railroad before winter, the Germans would withdraw at their leisure from their peninsula in France and Belgium to a shorter line, more easily held, that would cost a half-million casualties to break.

SPEED was the only way to prevent that—speed all along the line, speed, above all, for the American attack across the German line of retreat. That was the only answer General Pershing could see. The Americans had the place of honor. They could make possible a sweeping Allied victory before winter. They must not flinch at a high price now that would save paying a higher later. Our own initial success, Allied victories to the north, in the Balkans, Palestine, Italy, were bringing down the Teutonic house of cards. Only the day before, Bulgaria had collapsed.

On October 1st orders went from Souilly that on the fourth, the army would attack again on the whole front of the Meuse-Argonne. The same day, October 1st, Hindenburg telegraphed Berlin from Spa, German Headquarters, that Germany must ask armistice of the Allies surely next morning, possibly that night. The Kaiser came to Spa and heard bitter tidings of defeat. He would not believe them. Instead of asking armistice, he tried to spur popular enthusiasm by announcing governmental reforms for Germany and asking the Liberal Prince Max of Baden to form a new ministry.

The Allied attacks continued. That same day, the British, with the 27th and 30th American Divisions in the spearhead and with French support, broke the Hindenburg Line where it was most strongly fortified, though not naturally strongest, from Cambrai to St. Quentin. The Belgian-French-British attack in Flanders still went finely. The moral effect equaled the military.

So Hindenburg sent his telegram and Ludendorff talked to Von Lersner, representing the German Foreign Office at Grand Headquarters, who reported:

> To-day the troops are holding, but a breakthrough may come any moment, and our peace offer would then arrive at the most unfavorable time. Ludendorff feels himself at the mercy of the dice. At any instant and any point, a division may fail to do its duty.

Nevertheless, the German politicians kept their nerve and went on forming the new "democratic" government without asking the armistice.

ON OCTOBER 4th, Prince Max assumed his duties as German Chancellor. The same day, the attacks Hindenburg and Ludendorff dreaded flared up again, and in that vital Meuse-Argonne region. The Americans were coming on once more after four days of rest and reorganization. Next day, Prince Max sent his first request for an armistice to President Wilson.

But on the front there was no armistice! When the American First Army and the French Fourth Army, with the Second American Division as spearhead, attacked astride the Argonne on October 4th, they had to fight all the way. Losses were heavy, and that day commenced the bloodiest period of fighting in American history.

Our hope that we might still break through the Kriemhilde Line and get quickly across the German rear, or throw their leisurely retreat into confusion, came to nothing. The Germans fought too hard. We had put in the veteran First, Third, and Thirty-second Divisions. The Army staff had issued special orders against sacrificial frontal attacks, mixing of units, and lack of coöperation between commanders, trying to correct the weaknesses shown in the first attack of September 26th. Objectives were the same as then—the Kriemhilde Line heights at Cunel and Romagne. We did not take them. But we did get nearer by a mile or two—a mile or two studded with still forms in khaki.

The Germans were ready for us. They counter-attacked on the first day, this time. Where before had been one machine gun, now were two, or three or four. Their rattling and crashing resounded among the wooded hills. Although this time six of our eight attacking divisions were battle-experienced, only the toughest, the most desperate could come near the "Army Objective."

That division was the First, and its accomplishment was one of the finest feats of the whole great battle. The division had come on a hurry call to relieve the worn-out 35th. Its artillery had disregarded traffic rules in getting into position. Some of its infantry were still rather green replacements, who promptly sat down in

In this busy age there is only time for the best books

IF TIME is precious," said Carlyle, "no book that will not improve by repeated readings eserves to be read at all." Time owadays is more precious than ever efore. Nobody questions the fact hat good reading is an essential part f every human life.

But how can the busy man or voman take the time to cull the best ut of the hopelessly large amount of iterature that has been written, when modern public library contains hunlreds of thousands of books?

Squarely facing this vital question, Dr. CharlesW. Eliot, America's greatest educator, undertook the colossal ask of assembling in one set the ream of the world's writings; the ure gold of the mass of literature he ages have inherited. And the lorious result of his lifetime of study s the Five-Foot Shelf of Books (The Harvard Classics.) In this wonderful ibrary are the writings of 302 immortal authors, the books that make for clear thinking, and bring endless delight; the books that everyone must know to be well read. The coupon on this page will bring you, with no obligation, further information about these great books. You owe it to yourself to know more about the library that a quarter of a million cultured families already own, read and cherish.

Dr. Eliot's Five-Foot Shelf of Books
(The Harvard Classics)

The free BOOK

This attractive booklet will be mailed to you free. It explains more in detail than can be stated here, the scope and content of The Harvard Classics. The Collier plan of paying for the books while you read and enjoy them, brings this great library within easy reach of everyone. Do not put off sending for the free booklet, "Fifteen Minutes a Day." Act now!

Since 1875 COLLIER Good Books

EMERSON once said: "Would that some charitable soul, after losing a great deal of time among the false books, and alighting upon the few true ones which made him happy and wise, would name those which have been bridges or ships to carry him over the dark morasses and barren oceans, into sacred cities, into palaces and temples."

Dr. Eliot's Five-Foot Shelf of Books is the perfect fulfillment of Emerson's wish, for Dr. Eliot has named the books that made him happy and wise. And by assembling these books in one practical, convenient group, he has spread the happiness and wisdom of which Emerson speaks. Through The Harvard Classics people have found out that the classics are not dull, but intensely stirring, not beautiful old antiques, but stimulating to modern thought with vital application to everyday life.

The free book, "Fifteen Minutes a Day," tells how Dr. Eliot chose the masterpieces of all time, and so arranged them with Footnotes, Indexes and Reading Courses, *that anyone* may get from them the broad knowledge, the cultural viewpoint that every university strives to give. Mail the coupon today.

A GIFT OF THE CENTURIES

DOWN through countless centuries there has been slowly developing one of the great comforts for the human heart of today.

Scientists have searched out the secrets of Nature. Inventors have perfected metals. Mechanical experts have developed processes.

A quarter of a century ago these were combined to provide at a reasonable cost positive and permanent burial protection.

The immutable law of Nature which governed the designing of the Clark Grave Vault makes it certain that no moisture can enter.

The use of Keystone copper steel, or Armco Ingot Iron, in 12 gauge weight, gives permanence. In the quarter of a century this vault has been in use it has never failed.

The higher priced vaults are plated with pure cadmium, by the Udylite process, exclusive on this vault. This means the greatest rust-resistance known to science.

Representative families are demanding the Clark Grave Vault as a logical part of the burial equipment. It is a comfort in time of sorrow, a mark of respect, a tribute of love.

Leading funeral directors recommend the Clark and give with it a 50-year guaranty.

Less than Clark complete protection is no protection at all!

The Clark Grave Vault Co., Columbus, O.

Kansas City, Mo.

CLARK

GRAVE VAULT

This trade-mark is on every genuine Clark Grave Vault. It is a means of identifying the vault instantly. Unless you see this mark, the vault is not a Clark.

mustard gas shellholes, painful for them and for the staff. But the majority were of the old First, proud of their "savvy" how to make war. They had the Aire Valley sector. Back of them, a French cavalry division pointed for Grandpré.

The cavalry did not reach Grandpré, nor did the First, but the First opened a road that finally led to Grandpré. In seven days they advanced nearly five miles, with losses of nearly 9,000, the heaviest suffered by any American division in any single action.

It was thanks in some measure, too, to the Second Division in the Champagne that the Germans left the Forest. As the First Division fought up the Aire Valley east of the Forest, the Second fought up the Champagne plain west of it. Each did its job.

WE HAD not pierced the Kriemhilde Line at Cunel and Romagne, where we wanted to pierce it. Still, here was a chance to get the Argonne Forest out of our way, and carry out part of the plan, by reaching the Kriemhilde Line at Grandpré, where there might be a soft spot. While the French and the 36th American Division advanced west of the Argonne to follow up the Second's blow in the Champagne, we would pinch out what remained to the Germans of the Forest by an attack from the jumping-off place the First Division had gained on its eastern edge. That was one of the most daring things we did in the battle; it succeeded well, would have succeeded better had it been done just as planned.

The Pennsylvania Guardsmen of the 28th and the All-American 82d Division stormed the eastern Argonne bluffs overlooking the Aire Valley. They scaled them in the early morning of the 7th of October, and took and finally held Châtel Chehery and Cornay, two villages that clung to the heights. That fight resembled Lookout Mountain or Stony Point, both famous in our history; but more men fought in it, and it was only an incident of the Meuse-Argonne.

Fighting was desperate and hand-to-hand. An entire brigade of the 82d Division, some 8,000 men, had been ordered to attack; but through haste and confusion, fewer than 2,000 waded and swam the Aire on time. Fortunately, the almost exhausted 28th justified its name of "Iron Division," and one of its weakened brigades, commanded temporarily by Major General D. E. Nolan, Chief of Intelligence, who preferred the front to G. H. Q., stormed Hill 244. The rear of the Germans in the Forest was threatened, and Major General Robert Alexander's 77th Division from New York City was attacking them in front.

By noon of the same day, they commenced to give way before him, although they repeatedly counter-attacked fiercely around Cornay for time to get out. We had done on a small scale to the Germans in the Forest what we were trying to do on a large scale to all the Germans in Northern France and Belgium—pinched them out, by converging attacks, and threat to their line of retreat.

So the October 4th attack had not taken the Cunel-Romagne heights, but had removed a tremendous obstacle from the road to Sedan. It had rescued the left flank of our army from the terrible cross-fire of German artillery on the eastern Argonne bluffs that had cost us so many casualties, and delayed us so seriously in the Aire Valley the first ten days of the battle. That was the military result.

Another result was that American newspaper readers were given the two best-known American "hero stories" of the World War, that have found places in our history with Bunker Hill and Valley Forge, the Alamo and Pickett's Charge, and San Juan Hill—the "Lost Battalion" and Sergeant York.

The Argonne Forest became famous, because the 77th Division from New York City fought there, because a third of the correspondents covering the battle represented New York newspapers, and because any fight in that weirdly picturesque Forest was a "good story" anyway.

The Forest, of course, was one of many obstacles, and a big one, on the road to Sedan and Mézières and the all-important railroads. It must be conquered before they could be reached; but of the 1,200,000 Americans in the Meuse-Argonne battle, barely 100,000 fought in the Forest, and it occupied only a fifth of the whole battle front. Of the 100,000, the 77th Division's 27,000 did most of the Forest fighting.

WHILE the Argonne Forest was making heroes, and becoming the best advertised piece of real estate in the world, things more closely connected with these events than appeared on the surface commenced to happen twenty miles away, on the other end of the battlefield. While on the left we pinched the Germans out of the Forest, we started a new attack on the right, east of the Meuse, to clear them from its heights.

There was no worse fighting in the battle than that east of the Meuse, although it was comparatively uncelebrated. The 33d Division did another brilliant job, bridging and crossing the Meuse under heavy fire, to scale the heights from the west, while the 29th New Jersey, Virginia, Maryland, and District of Columbia Guard Division scaled them from the south, supported on its right by the 18th and 26th French Divisions. Those two American divisions and their French comrades made a splendid fight. The 29th, in battle for the first time, drove farthest north under Major General Morton, in a heroic advance that cost nearly six thousand casualties.

General von Gallwitz, commanding the German Army group there, appealed to Hindenburg and Ludendorff for reinforcements, no matter from where, so that he could stop the Americans and French.

But we had our worries: Despite success on the flanks, in the Argonne Forest and east of the Meuse, our main attack in the center had still failed to break the Kriemhilde Line and take the heights at Cunel and Romagne. Perhaps it was the courage of despair, but the Germans surely were fighting with great courage. On the night of October 9th, General Pershing sat down in the old mairie at Souilly with General McAndrew, General Conner, and General Drum, and reviewed the whole situation, and it looked sufficiently serious:

Our second attempt at a break-through had not succeeded. Now the Germans were fully braced for us, all reserves up, nearly 300,000 men in line in the Meuse-Argonne, 75,000 more in the adjoining Woëvre, 100,000 at least in reserve, with

$15,000.00 *in cash prizes for a slogan about* WOOD

Read the fascinating story of Nature's most friendly and useful material. Know more about its beauty, durability and economy. Learn the truth about America's vast and permanent supply of timber. Then send us your slogan!

This message may mean $5,000 to you. And remember that these slogan contest prizes are seldom won by professional writers or technical experts. Nearly always the winners are people who never expected to win. So do not skip anything—not one word.

No timber shortage

Almost everyone has been induced to believe that this country is confronted by an acute shortage of timber. This is not true.

In fact, Col. William B. Greeley, U. S. Forester, urges the nation to "Use wood and conserve the forests." For timber is a *crop*. It needs to be cut when ripe. Failure to do so means *waste*.

There is enough standing timber in the United States today to build a new six-room house for every family in this country, Canada, South America, all of Europe and the entire British Empire! And the *additional* lumber supplied by the *yearly growth* of standing trees would build a continuous row of these houses along both sides of a street reaching from New York to San Francisco.

These are not "opinions" but *facts* backed up by extensive investigations and published reports of the United States Forest Service.

Better lumber than ever

Not only plenty of lumber—but *better* lumber! Today, *American Lumber Standards*, adopted by the industry and endorsed by the U. S. Government, give the purchaser protection he never had before.

Universal adoption of reliable standards has won for the Lumber Industry high praise from Secretary of Commerce Herbert Hoover.

Wood built America

Without wood there could have been no America!

Stout wooden ships brought the settlers of America across the wide stretches of the stormy Atlantic. Wood sheltered them in sturdy log cabins and wood housed their descendants in colonial mansions—many of which endure today.

Throughout the Thirteen Colonies wood built the homes, the churches, the town halls, the schools. Wood built the wharves, the warehouses, the stockades, the barns, the corn cribs, the bridges.

Later, the Forty-Niners battled their way over the long cruel trail to California in covered wagons made of wood. On ties of wood the railroads advanced unceasingly, West, East, North and South.

Uses constantly increasing

Twenty years ago there were less than 2600 commercial and industrial uses for wood. Today there are more than 4500.

From the staunch timbers in mine shafts to the buoyant strength of Lindbergh's immortal plane, wood serves mankind in countless and ever-increasing ways.

Wood endures

The oldest and most beautiful homes in America are houses built of wood. Many of them stand today, as sound in timber and beam, and *as livable*, as they were before the Revolution.

Wood endures—and the supply is enduring. It is the only one of our natural resources that *grows*. The mine becomes a gaping hole; the forest forever *renews*.

Wood is beautiful

Wood possesses a pleasing natural beauty of grain and texture that mellows and deepens with age and defies imitation. Wood can be fashioned and carved and fitted into thousands of charming designs.

And surely it is significant that the American architect prefers lumber for his own home!

Wood is friendly

Of all materials there is none so *friendly*, with such a sense of human companionship as wood. Wood is warm and alive to the touch. The handle of a tool, the steering wheel of your car, the arm of your chair, the bowl of your pipe—you like the feel of them because they are wood.

Wood is economical

Wood is stronger, pound for pound, than any other material. It is easily and cheaply fitted to special forms for special needs. Its moderate cost is due today, in no small measure, to the elimination of waste. There is a grade of lumber for every purpose, a right wood for every need.

* * *

To inspire renewed and greater appreciation of wood, and to make more widely known its almost endless variety of uses, manufacturers of American Standard Lumber in the National Lumber Manufacturers Association are preparing an extensive educational campaign. The first thing the Association wants is a "slogan." Send your coupon *now!*

NATIONAL LUMBER MANUFACTURERS ASSOCIATION
Washington, D. C.
Manufacturers of American Standard Lumber

This free booklet may mean $5000.00 to you

Send today! Mail coupon below and booklet will be sent you postpaid. It contains the *Official Blank on Which Your Slogan Must Be Submitted*. This may mean $5,000.00 added to your bank account. So mail your coupon right now.

First Prize . . .	$5,000
Second Prize . . .	2,000
Third Prize . . .	1,000
Four Prizes (each) .	500
Fifty Prizes (each) .	100
Total,	$15,000

In case of tie, the full prize will be paid to each tying contestant

Contest Closes December 15th

National Lumber Manufacturers Association, AM-11-27
P. O. Box 811, Washington, D. C.

Gentlemen:—I want to enter your $15,000 Prize Slogan Contest. Please send me free copy of your booklet, "The Story of Wood," so that I may qualify.

Pathé News

The First— The Fastest— The Favorite!

The biggest news story in years was Lindbergh's epic feat. It appealed to the imagination of all.

Not only did Pathe News show the start, the arrival in France, the marvelous receptions there and in Belgium and England, but on the flyer's return to this country and his welcome by official Washington a complete motion picture record of the happenings was shown in the Pathe News in Chicago, Boston and other cities equally distant, *the same evening!*

How can such marvelous speed be attained?

Words may be wired—film must be carried in cans—yet Pathe News treads on the heels of the newspapers in its swift presentation of news.

Only through a vast, world-wide organization, trained by sixteen years of newsreel experience, is such astounding speed made possible. From cameraman to the screen every effort is made to eliminate even a moment's delay.

Pathe, the first newsreel, is still the first. It is the first on the scene—first on the screen—and the most interesting of all motion pictures.

Ask for it at your favorite motion picture theatre— look for the Rooster!

"Sees all— knows all"

auxiliary troops, more than 600,000 men, with thousands of guns and machine guns, opposing the American First Army alone. Farther north, their retreat was under way, and we were attacking its pivot. For them, it meant desperate defense, for us, relentless attack, for no one knew how long. We must take stock of our resources for a long-drawn-out battle and make arrangements far ahead.

IF WE didn't, we should have soon a serious shortage of material, even of men. The United States never accomplished the great feats of production of war material that were promised, and of which people read predictions in their newspapers with such pride and enthusiasm. We were in the war nineteen months, but that was not time enough to get many things made and to France in quantities enough to matter much. That was due partly to delays and blunderings at home, partly to the emergency of early 1918, when the Germans came so near winning the war that we had to send over men, men, men, to turn the tide and give the Allies victory. So the Allies gave us the war material that we were not making enough of at home, or could not send over if we were.

We needed more artillery to prepare for our attacks by blasting the thousands of German machine guns from their nests before the Kriemhilde Line, and so to save the lives of thousands of our men who attacked them. The French had given us what they could spare, from their own attacking armies. All told, only twenty-nine American-made artillery pieces reached the Meuse-Argonne front through the battle, and some of these were there during only part of it. Five of them were great 14-inch naval guns on railroad mounts, that fired just 436 shots in the battle.

All the remaining artillery was made in French works and bought from the French Government, diminishing by that much the fire power of the French armies. When we entered the war, the French gave us the plans for their famous 75 millimetre field gun, and after spending some time trying to improve it, we finally landed one hundred and nine 75s made in America, at a French port, just before the Armistice. They never reached the front. We could have used two thousand more 75s than we had, in the Meuse-Argonne.

We were not so good on making shells for our guns and getting them over. American-made six-inch shells arrived in France October 30th, too late to reach the front. A few American-made 75 shrapnel shells for American-made guns did actually reach the First Army dumps before the Armistice. But the war ended without an American gun having fired American-made shrapnel at the Germans.

When we entered the war, we decided to develop our own new type of machine-gun, although some of various British and French types were good. We advertised the Browning as "the best in the world," which it probably was. But only one thousand or more Brownings reached the Meuse-Argonne battle, accompanying just three of the twenty-two American divisions that took part actively in the fighting. The rest used about fifteen thousand French Hotchkiss guns, and, for light machine guns, the broadcasting French Chauchat.

No tanks made in the United States ever reached the front. Ludendorff said in his memoirs that Allied tank attacks were a decisive factor in their winning in 1918. That wasn't true of our tank attacks in the Meuse-Argonne. We hadn't enough tanks. What we had were borrowed from French and British, who had scarcely enough for their own needs. We had only sixteen to jump off in our last great attack, November 1st.

About aviation, the censors often asked us: "For God's sake, lay off it!" It was a sore point. Everyone knew about the "sky filled with airplanes" publicity at home that had speeded up German airplane production. Everyone knew, also, that our own production had failed sickeningly. We never had enough airplanes in the Meuse-Argonne, and the longer the battle lasted, the fewer we had.

The Liberty Motor, heralded as a product of wizardry, turned out in the battle test a good serviceable motor, about like some Allied motors, its principal advantage being quantity production—once that materialized. The censor who passed a dispatch that said so remarked, "This may counteract some of the bunk in the States."

The best feature of American aviation was the aviators, a fine lot, who gave their lives without stint to keep, as nearly as possible, air control of the Meuse-Argonne.

On the ground, for an army supposed to cut across a German line of retreat and pursue a fleeing enemy, we resembled tortoise rather than hare. We had only fifty per cent of the normal allowance of motor transportation. Sometimes it got lower than that. But for the French aid, we should have had only twenty-eight per cent.

We had few over half as many horses and mules as we should have had, some of those decrepit nags no other army would use. They died so fast in the Meuse-Argonne that Marshal Foch made the French give us thirteen thousand of their horses.

It was thanks to General Peyton C. March's energy and ability as Chief of Staff in the United States, and to the drive of Major General James G. Harbord, as Commanding General of the Services of Supply in France, that the supply situation was as good as it was. The S O S in France worked night and day, straining every nerve and muscle, throughout the Meuse-Argonne.

ON AND behind the battlefield itself, we were better off in one respect in early October than we had been when we started on September 26th—we had something like special troops enough to get our work done.

Our losses were becoming heavier, would be heavier still in the stubborn, slogging struggle that was ahead. Sick and wounded were going back in an unending stream that seemed always larger, to hospitals that just managed to care for them. This semi-open warfare only could end the war, but flu and pneumonia took heavy toll of front-line troops without the dugouts and shelters of trench warfare, in the open, with only foxholes to protect them from the October raw climate and drizzling rain of France's least sunny province, of which the doughboys said, "Lor-raine—say the 'rain' part loud."

Joe Humphreys says: "Holbrook Blinn is right—Luckies are certainly good"

Noted sports announcer, talking to his son, George Cohan Humphreys, at their home in Fairhaven, New Jersey, recommends Lucky Strikes.

Holbrook Blinn,
Noted Stage Star,
writes:

"Each performance brings with it its attendant nervousness and I relish the opportunity for a soothing smoke while playing. During the course of 'The Play's the Thing' I am called on to smoke at frequent intervals. It is always a Lucky Strike. I know from many years' use of this cigarette that my throat is constantly protected and that it will give me the greatest enjoyment."

Holbrook Blinn

You, too, will find that Lucky Strikes are mild and mellow—the finest cigarettes you ever smoked, made of the finest Turkish and domestic tobaccos, properly aged and blended with great skill, *and* there is an extra process—"It's toasted"—no harshness, not a bit of bite.

"It's toasted"

No Throat Irritation - No Cough.

To fill the holes in the line that must always go forward, General Pershing and his advisers estimated, the night of October 9th, that they must have 90,000 fresh men, "replacements," to feed into the already experienced divisions that had been in the battle and must go back. But only 45,000 were in sight.

The only thing to do was to break up some new divisions and distribute their man-power to the Meuse-Argonne and the Services of Supply, where it was needed.

It was tough for some of the men. They had been sent to France too soon, sometimes only a few weeks after entering training camps, at some of which they learned little except setting-up exercises, squad drill, and community singing. Then they were sent to the front, to the greatest battle their country ever fought, at its fiercest stage, sometimes not even knowing how to handle a rifle.

We correspondents could always recognize them on the roads of the battle area. They were paler, slighter than the men who had had their proper hardening.

"What outfit's this?" we would ask, and the reply would be:

"Well, we were from the 76th Division (or the 86th or any of the other 'lost divisions'), but now they tell us we're the Umptieth Replacement Battalion."

But even such emergency measures were not enough. Before the battle ended, we had to reduce the strength of our experienced divisions by 4,000 men—from 27,000 to 23,000—by cutting infantry companies of 250 to 175 men, and other expedients. At the time, our fighting divisions then in France needed 103,513 infantry and machine-gun replacements, and only 66,490 were available.

Is it any wonder that the little group of generals did not laugh or joke much as they talked, that evening of October 9th, on the second floor of the mairie at Souilly, listening to the boom-oom-oom of the guns rumbling along the heights of the Meuse? A harsh, menacing rumble, the voice of the God of Battles demanding more sacrifice. And we must make it, for so only we might carry out Marshal Foch's plan and beat the Germans here and now, once and for all, before winter intervened and we had to make a far heavier sacrifice in another year of war. We must fill our gaps and go ahead.

There were still two American Divisions, the 27th and 30th, with the British, and five, the 2d, 6th, 36th, 81st, and 88th, with the French. We needed them all in the Meuse-Argonne, and it was decided that General McAndrew and General Conner should go to Bombon and tell Marshal Foch so. Nevertheless, next day, General Pershing predicted that, if things went as they ought, the war would be over before Christmas.

DURING the conference, as if to confirm the prediction, news came to Souilly that the German Government had sent President Wilson its second armistice proposal.

The French were announcing their advance on the whole front from the Champagne to Rheims, freeing many square miles of France held by the Germans since 1914, and the taking of St. Quentin. The British communique of October 9th told with just pride of an advance in a short time of thirty to forty miles, capture of 110,000 prisoners and 1,200 guns and the taking of Cambrai. The Americans had made possible the French advance, and, to some extent, that of the British. It was a coöperative campaign, in which each depended in part upon the others. But the Germans were, in a measure, getting away with their retirement.

There must be no cease in the American attacks. Losses must be made up, and Marshal Foch promised that, as soon as possible, the French would return some of the American divisions with their troops. The French themselves needed replacements for the losses of incessant fighting throughout spring, summer, and fall—and three heavy years before that. The Marshal realized, of course, that the Americans were striking the pivot of the German retirement, and their losses were heavy; but they were just beginning to have losses; comparatively, they were young and fresh. They must keep on striking.

"*Combattez! Combattez! Combattez!*" cried the ardent, aggressive Marshal.

That day and the next, the Americans did "Fight! Fight! Fight!" some of the hardest, bitterest, infantry fighting on the Western Front. In it, with awful losses, we set foot at last in a small part of the Kriemhilde Line, but again those dread heights at Cunel and Romagne defied us.

THERE was a chance that our two successful blows, in the Argonne Forest and east of the Meuse, had drawn German reserves from the center between Forest and the river and distracted General von der Marwitz's attention. General Pershing took that chance, and on October 9th, while the I Corps on the left was mopping up the Forest and advancing to the Aire, facing Grandpré, he threw the V Corps in the center, straight at the slopes leading to the heights, with the III Corps on the right helping.

They were all veterans now in the V Corps, the First, Thirty-second and Third Divisions; they, if anyone, could endure what they had endured already and still advance. Added was the 181st Brigade of the 91st Division. The First and 32d were expected to take Romagne wood and town largely by encircling attack, and the 32d was also to storm the ridge of Côté Dame Marie, the dominating point. The Third, with the 80th, was to drive for Cunel.

The 80th was in the III Corps and on its right was the wonderful Fourth, now in the fourteenth of its unequaled twenty-five days' service in our greatest battle. It was to flank Cunel from the right, and then swing east to the Meuse.

The 32d, forty per cent of German birth or descent, Michigan and Wisconsin lumbermen, some Indians, a great fighting division, was to storm the Côté Dame Marie on the left, and a deep, strong trench line on the right, thus encircling Romagne village. That was really the kernel of the Kriemhilde nut.

Struggling forward through machine-gun fire that wiped out platoons and companies, shell-fire that made earth a hell of flames and smoke, hurtling rock and sod and whistling razor-edged fragments of steel—so ingeniously does man make such things—the Michigan-Wisconsin men reached the Kriemhilde Line and fought hand-to-hand with the Germans who defended it.

At last, after two weeks of struggle, American soldiers set foot in some of those trenches upon the heights that barred us from our goal—Sedan and the railroads. But not many Americans reached the trenches, so many lay before the barbed wire. They got to the Côté Dame Marie and the Deauville trench, fought there with rifle and bomb and bayonet—and stopped. They were less than a mile from Romagne. The Third got even nearer to Cunel, but could not take it. The main Kriemhilde Line was still intact.

That was because the Germans fought until death to defend it. Wherever the myth originated that they had to be chained to their machine guns, it was not there nor then. They fought their guns until they were killed across them.

On October 10th, all three Corps attacked. Souilly set no particular objectives. Each Corps was to fight as hard and get as far as it could. They went forward, but on most of the line they could not stay forward. The Thirty-second, for all its efforts, could not sweep over the Côté Dame Marie, or into Romagne, nor could the Third take Cunel. Only the First advanced, following up the Germans, who were retreating from low ground west of Romagne Wood into the main Kriemhilde Line trenches.

That was only a local retreat, and by the night of October 10th from the Meuse to Grandpré, the Germans were in their main fighting positions, backs to the wall. There, what remained of eight American divisions faced them, worn down by heavy fighting and sickness, weary, cold, wet, sometimes hungry and disorganized. But they were asked to make next day one more great effort!

We attacked all the way from Ornes, east of the Meuse, to Grandpré, with twists and turns, a front of nearly thirty miles—largest on which until then an American army ever attacked. To spur tired men to greater exertions, the Army Staff set the objective farther ahead beyond the Kriemhilde Line—at Buzancy, eight miles from our front line, center of the almost unfortified though surveyed Freya Line, last prepared German line before Sedan.

WE COULDN'T make it. October 11th was a hard day. It was the last jump-off for many. They left their foxholes to be struck down by a fire as withering, devastating, as any American troops ever faced. They were attacking prepared entrenchments crowning heights and protected by woods—there could be nothing worse.

It seemed that men could not live in the open, slashed by machine-gun bullets just skimming the ground, the height of a scythe. If they took a patch of woods, it was drenched with gas. If they approached a Kriemhilde trench, they must first get through a barrage of bursting shells, then fight the German infantry hand-to-hand, and if they conquered a hundred yards of trench, hold it against counter-attack. And of their own artillery there never seemed, to the weary doughboys, enough to smash a way through.

We bought every foot of ground with blood. When night fell upon a crimson day, we had a shaky hold of some of the Cunel-Romagne trenches, although nobody knew who would keep Cunel heights. First we had them, then the

The Pavement *for* Congested Streets

THINK of the traffic in your town twenty years ago. Not much of a problem then, was it? But today! Times have changed and the streets of yesterday—still the streets of today—are as obsolete as a 1907 motor car. Not only must our street pavements be made wider and still wider to accommodate growing traffic volume. They must be specially designed for durability, safety and uninterrupted use.

The concrete street is modern—developed, like the concrete road, specifically for motor traffic moving on rubber instead of steel. Resilience is built into the modern vehicle. Its roadway must be rigid, maintaining an even surface under impact, wear and temperature. The concrete street meets these requirements perfectly—and it is the safest pavement wet or dry.

The clean, gray beauty of concrete streets makes them especially desirable in residential districts and for parks and boulevards. Write Portland Cement Association, Chicago, for a booklet citing the experiences of communities like yours.

Germans. But, having got so far, we found we must keep on going or be pounded to pieces. But we needed some fresh troops and more guns, and must allow a few days to bring them up.

Other things were needed too. General Pershing had been on the front through the fierce fighting of the 10th and 11th, urging everyone ahead, encouraging, inspiring, driving where drive seemed needed. In some places there had been poor leadership, as generals began to crack under a physical and mental strain more terrific than in any war in history, for which they were ill prepared in our small peace-time army. Now, there was something of a shake-up, and an important change in the Command of the American troops in France.

General Pershing divided the First Army front of ninety-one miles between two armies, the First and Second, assuming general command of both, and relinquishing the First Army to Major General Liggett, whose steady, relentless progress on the western flank of the battlefield had cleared the Argonne and reached Grandpré at last.

The new Second Army front began where the First Army's attack east of the Meuse stopped, at Fresnes-en-Woëvre, and extended to Port-sur-Seille on the Moselle, south of Metz. Its commander, Major General Bullard, received orders to prepare to start the Metz attack as soon as we could give him men, guns, and material enough—meantime, to harass the Germans. He and General Liggett were made Lieutenant Generals.

To take General Liggett's old I Corps, came from the Woëvre one of the most forceful American Major Generals, Joseph T. Dickman, commander of the Third Division in its impregnable defense of the Marne on July 15th and of the IV Corps in its dashing advance at St. Mihiel. A commander no less forceful got General Bullard's III Corps, Major General John T. Hines, who had commanded the mainstay Fourth Division. To command the V Corps came the epitome of a military leader, daring and careful, ruthless and inspiring, whose officers and men worshiped him, Major General Charles P. Summerall, of the First Division. Our new set of Corps Commanders, from Meuse to Argonne, were the right men.

THE propaganda front was as active then as at any time in the war. We had to consider morale, Allied and American, rather than exact truth. We were trying to win a war, and to do it we must keep our people and our Allies confident. So G. H. Q. looked at it, so G. H. Q.'s always will look at it, and, doubtless, they are right. One of the War God's first victims is the maiden Truth.

The Germans themselves gave us the best bit of propaganda we had during the entire war. Just at the right moment Intelligence captured an order that General von der Marwitz had issued to his troops:

> The fate of a large portion of the Western Front, perhaps of our Nation, depends on the firm holding of the Verdun (Meuse) Front.

That was the gist of it. The German General said that the most dangerous to the Germans of all the Allied attacks was the American attack in the Meuse-Argonne.

Meanwhile, the First Army was girding itself for another desperate dash at the Kriemhilde Heights that it hoped would make up for the repulse on October 11th. Our young army was not used to repulses, and this one had cut deep. Faces in all the headquarters, in billets in ruined villages, along the roads of the battle area, were grim. Our old friends of the Rainbow were grim when we met them coming over from the Woëvre for their first trial in the fire of the Meuse-Argonne. Broad, brown, weather-beaten, hard as nails, they got over the roads with the incomparable slouching swing of veterans.

They relieved the First, and the Fifth relieved the 80th. These two fresh divisions were to drive right through the Kriemhilde Line, meet two or three miles beyond and press forward. The objective this time was nearer than Buzancy.

On the right, we would try again for the dominating crest east of the Meuse, the Borne de Cornouiller. On the left, Gouraud's Fourth French Army, which had joined us on the Aisne at Grandpré, was to attack on the same day, hoping to outflank the Germans blocking us there. Gouraud chose the 14th to attack, so we did the same, although we preferred the 15th and it disarranged our plans. Soon after the jump-off, hearts sank, as the first reports began to come in.

"Licked again!" we whispered one to another. "What shall we write now?"

BUT the doughboys had not yet begun to fight. In the next three days they turned the tide of the great battle, and made sure that we should have what we desired and be in Sedan before winter.

Those were three days and nights of hell, nothing else. We had a little more artillery to help than on October 11th, though not all we needed. The famous Meuse-Argonne autumn rains were at their worst, drenching and chilling men who fought all day and lay all night—sometimes lay all day and fought all night—unsheltered, on the treacherous slopes of the Kriemhilde Heights. Behind were the new Corps Commanders, all fighters and drivers, and General Pershing, pushing this final attack before turning over Army Command to General Liggett.

"Fight! Fight! Fight!" they said. "We must go through!"

We did go through. We broke the Kriemhilde Line once and for all, and stepped out upon ground whence we could deal the blow that drove the Germans from Northern France and Belgium and was militarily decisive in ending the war.

The infantry jumped from their foxholes almost at once into hand-to-hand fighting at many places. Down upon them from the heights came storms of bullets, snapping and crackling, thudding into human flesh, while the air sobbed with the rush of shells. Gray mud beneath, gray sky above, gray-clad men with gray steel bayonets, thrusting and stabbing, gray faces gleaming moist with rain, smell of blood and sweat and powder, curses, cries.

By night the 32d Michigan and Wisconsin had made its way around and over the crucial Côté Dame Marie, and to a bright place in our history.

Bullet and shell stopped their attack in front. But to their left, the fresh 42d was driving as planned, wiping out some of the machine guns that had raked the 32d. By nightfall they had the Côté Dame Marie. Also, they had that village of such historic, yet sinister significance in the whole Meuse-Argonne battle—Romagne. It had been taken largely by the flank. Thousands of doughboys had stared at it through bloodshot eyes and muttered, "We'll git you yet," cursing it as "Romain," and still call it that at hundreds of American Legion meetings. Near Romagne is the largest American cemetery in France.

The 42d had helped the 32d crack one hard nut, and also cracked some of its own. Its battle then was the fiercest of the Rainbow's long front service in France. It took all three days and nights, seventy-two hours such as none in the Division had spent before or since, ending with the right of the Division, Alabama and Iowa infantry, through deadly Romagne Wood and from the nearby Côté Chatillon, looking down proudly upon the Germans as the 32d looked down from the Côté Dame Marie.

Those two ridges were pillars of the Kriemhilde Heights between the Argonne and the Meuse, and we had them.

But the two Guard Divisions could go no farther. They had in three days put us through the center of the Kriemhilde Line and ready for the last great blow. They had lost perhaps, 7,000 killed and wounded; but the other division that attacked with them and whose sturdy pressure all along the line helped them, would bring the total near 20,000 for the three days.

The III Corps had taken Cunel, linked with nearby Romagne as symbol of the Kriemhilde Heights.

We began to get unmistakable proofs that the pace was telling seriously on the German army, and that rank and file were losing their confidence, as their leaders had lost theirs for a time. Every day we had watched the prisoners clumping along in groups herded by amused cavalrymen, or standing silent in the barbed-wired prison cages. "Soon we shall have no more Kaiser," a few of them said.

And how about that retreat? Hindenburg wrote this in his memoirs:

> The pressure which the fresh American masses were putting upon our most sensitive point in the region of the Meuse was too strong.

But few, if any, foresaw then that the morale of the whole German army would so soon buckle and collapse. The gray monster seemed like a clever champion, battered, bleeding, rather short of breath, but hardy and wily, striking shrewd blows and using his ring-craft to stall off a knockout while he pulled himself together.

SO CLOSED the first and critical phase of the Meuse-Argonne. At last we had the Germans groggy. All that we needed now was a little time to gather strength for the haymaker.

The fighting spirit of a fresh young army, upon which the General had

After the game—SORE THROAT

In the **THROAT** *and nose more than* **50 diseases**

have their beginning or development. Some, of mild character, yield to an antiseptic. Others, more serious, do not. At the first sign of an irritated throat, gargle frequently with Listerine, and if no improvement is shown, consult a physician.

watch your throat!

Gargle when you get home

Suppose your team did win—what comfort is that, a week later when sore throat, or worse, has put you in bed?

Here's a good tip if you will take it. After any long exposure (and that includes cold bleachers) rinse the mouth and gargle with Listerine, the safe antiseptic.

Immediately, it attacks the millions of bacteria waiting for the moment when body resistance is low to strike.

Often, this simple and pleasant precaution will be the means of sparing you pain and sickness. Listerine nips many a sore throat and cold.

Incidentally, after a football game it relieves that hoarseness which is so troublesome.

The wisest thing to do, of course, during cold weather months is to make a daily night-and-morning habit of using Listerine. Millions do—and are healthier for it. Lambert Pharmacal Company, St. Louis, Mo., U. S. A.

SOUNDS LOGICAL The great success of Listerine Tooth Paste has proved that the idea of a scientific dentifrice at 25c (for the large tube) is a popular one.

LISTERINE

—the safe antiseptic

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

counted, had prevailed over the experience of a cunning enemy. War is a young man's game, and our young men were about to win it.

Our last and successful efforts to break the Kriemhilde Line had pretty nearly tired us out. The terrific pace had told upon us as well as upon the Germans. The First Army's casualties of all sorts were by now well over 100,000. It bore a heavy share of 40,000 flu cases in the A. E. F.

Battle strain was telling in another way: Some of our troops were straggling. The number has been estimated as high as 100,000 by General Liggett, the First Army's commander, and as low as 25,000 by General Drum, its chief of staff.

But the fighters were getting more supplies, at any rate. The vast SOS was hitting its stride across France, connecting the Meuse-Argonne with sixteen ports where ships from home discharged cargoes to maintain the A. E. F.'s 1,900,000 men. Its construction projects and depots were never all completed, it was still somewhat undermanned; but had by now almost 668,312 men and women, including 23,772 civilian employees. Generals Harbord and Dawes and Atterbury and Hagood put over the Meuse-Argonne, too.

BY NOVEMBER we were really beginning to look and feel somewhat as censorship and propaganda had always pictured us—a perfectly equipped and supplied army always advancing gloriously from victory unto victor—a picture as unfair to the doughboys and their leaders as it is untruthful.

At last, we had got almost enough artillery and mainly manned by Americans. Our dumps were piled with shells, and we could give the infantry a barrage such as we had always wanted to give them. We had almost enough American special troops. We had experience, doughboys, staff, and commanders knew their parts, and for the first time in the war, an American army worked like an American machine.

The attack of November 1st, for which it was now preparing, was our "big push" in the war, practically all-American, including the entire plan of attack.

Of the seven divisions that jumped off the morning of November 1st on the twenty-mile front from the Meuse to the Aire at Grandpré, five were National Army divisions, and probably half the two regular divisions were replacements, so easily four fifths of the attacking force were drafted men.

The Second was the only one of the "Old Guard" Divisions, and it had an appropriate part. Experienced, resourceful, with keen rivalry between its Marine and regular Infantry Brigades, the Second was chosen spearhead of Summerall's driving Fifth Corps, the spearhead of the Army.

The Corps was to make a big break through the center and take the Barricourt Ridge. It had only two front-line divisions, the Second and the 89th, a Western National Army Division that first Major General Leonard Wood, then Major General W. M. Wright had made one of the finest in the A. E. F. Behind were the trusty 42d and First, ready to take over once the Second and 89th were exhausted.

All the Allied armies were again to attack a German peninsula, but diminished in size by the waves that had beaten upon it since September 26th. The Allies were going to attack the front from northern Belgium to the Meuse, some 250 miles long, and on or behind those 250 miles were 2,000,000 Germans, thousands of guns, and much material. Facing the Meuse-Argonne was the 125-mile gap from Holland to the front, through which they were still trying to withdraw men and material to the Antwerp-Meuse Line protecting the German frontier, over the two great railroad systems through Liège on the north, and Sedan on the south. All the Allied armies were attacking together to prevent that.

The British were now only twenty miles from Maubeuge and Mons, and once there would seriously hamper the German retreat in Belgium, and might rout the whole German right wing. They were assisted by General Degoutte's Belgian-French-British army in Flanders, reinforced by the 37th and 91st American Divisions. The American First Army would drive again for Sedan now only twenty miles away, and if it got there quickly, it would break the back of the whole German retreat. Here was another chance to make completely successful the plan that Marshal Foch and General Pershing had first discussed in Ligny on remote August 30th.

In the all-important American center, the V Corps was splendidly irresistible. It shot forward six miles through German infantry and artillery like a meteor, through the Freya Line, onto the Barricourt Ridge. With three artillery brigades backing it, the Second flanked Barricourt Wood, which the 89th Division took. On its right the 90th, fine National Army Division from Texas and Oklahoma, took Andevanne and the Fifth advanced, putting the III Corps beyond its objective.

OUR terrific blow had so stunned the Germans that they could make no real counter-attack. They might retreat fighting, but retreat they must across the Meuse, and through Sedan and Mézières. On the left the I Corps leaped forward at dawn November 2d and found only a few machine gunners, with whom doughboys dealt, then jumped back to motorcycles and trucks and hurried after the retreating main body. The 77th got beyond Harricourt, their objective, and with the 80th closed a breathless day in the still smoking streets of Buzancy, fired by the Germans.

Getting the news of the far-flung battle as it rushed to its close was such a task that we missed the full story of one of its most striking features—more, one of its most important strokes, that greatly affected the outcome. That was the night march of the Second Division through the German Army and to a position four miles behind the German front line. Probably it was the most audacious feat of American arms in France, one of the most audacious in our history. But nobody outside the Second Division has heard much about it, although this march made the Germans retreat almost pell-mell from their positions.

On November 4th our front line jumped forward, and we began moving our heavy batteries to fire on the vital German railroad at Montmedy, Conflans, and Longuyon.

They boomed the beginning of the end for the Germans in Northern France. They kept the Metz-Sedan railroads out of business most of each day and night.

On the day that the 75s shells commenced falling on the tracks near Sedan, the Germans asked President Wilson on what terms they could have an immediate armistice. Just after midnight that night, Marshal Foch received from Field Marshal von Hindenburg a radio naming the German plenipotentiaries to negotiate an armistice, and asking how they could get through the French Lines. The German Government, the radio said, asked "a suspension of arms in the interest of humanity."

TO CRUSH the last bit of fight out of the retreating German armies, and to make their retreat a rout that might have been the greatest in all history, Marshal Foch was preparing a new blow. While to the north, the British sent in two cavalry divisions—hoping that their time had come—to the south, the Marshal was actually about to start the great encircling attack on Metz that Americans had planned a year before and the Germans had feared for two months.

The German armies were about to suffer the most crushing and complete military disaster in history. And for Marshal Foch it would have been the greatest victory a leader ever won—greater than anything the Marshal's military model, Napoleon, had to his glory—but it would have cost many thousands more Allied lives. The Marshal turned his back upon it, and took the armistice.

So, amid the golden glow of the sun shining through breaking mists and casting upon the uncleared battlefield a light like a halo the soldiers of the American Army found on November 11, 1918, the true glory of war—Peace. At eleven o'clock in the morning they fired their last shot, and the world's greatest war ended in the world's greatest victory.

AUTHOR'S NOTE: In the running story of the battle of the Meuse-Argonne, it was not possible for me to give a complete account of the part played by each American division. The divisions actually engaged, many of which I have mentioned, were the First, Second, Third, Fourth and Fifth of the Regular Army; the 26th, 28th, 29th, 33d, 35th, 37th, and 42d of the National Guard; the 77th, 78th, 79th, 80th, 81st, 82d, 89th, 90th, and 91st of the National Army. On the field coming into battle at the end of the war were the Sixth Regular and the 88th National Army divisions. Engaged elsewhere in the great campaign were the Seventh Regular, the 27th, 30th and 36th National Guard, and the 92d and 93d National Army divisions. The 27th and 30th took part in the famous British smash through the Hindenburg Line near Cambrai. After fighting in the Meuse-Argonne, the 37th and the 91st Divisions reëntered the campaign in Flanders. There were approximately 2,000,000 American soldiers in France at the time of the battle, of whom 1,200,000, in round numbers, took fighting parts. At the start of the great campaign, the American active battle front was twenty miles; at the time of the Armistice we were fighting on a seventy-mile front.—T. M. J.

How dentists strive to repair the damage done by cooks

The profession blames soft food for the prevalence of "pink tooth brush" and points out a simple way to combat it.

FACED with a grave increase in disorders of the gum structure, dentists have worked, long and arduously, to uncover the cause of these stubborn troubles as well as to effect their cure.

Almost unanimously they blame the foods we eat for our gum troubles—these soft and delicious foods, stripped, as they are, of the core and the roughage which should stimulate and "rub" the gums.

Why soft foods cause gum disorders

For the gums need activity and exercise as urgently as any other living tissue. They need stimulation, to speed an energizing flow of blood within their walls, and unless this fresh blood nourishes and sustains them, the gums grow flabby, tender and unhealthy.

Then "pink tooth brush" comes—a warning and a sign that more troubles, more dangers, perhaps, are ahead.

How Ipana helps to restore the gums to health

Above all the American dentist is practical. He doesn't seek to change the culinary habits of the nation, but he does recommend that we restore to our gums the stimulation which they need to keep them in health.

The majority of dentists recommend massage—a simple means of supplying stimulation through a few minutes' brushing of the gums every time you brush your teeth.

But, as your own dentist will probably tell you, not all tooth pastes are suitable for such a purpose. Thousands of dentists recommend Ipana, for Ipana is specifically compounded to be beneficial to the gums as well as to clean the teeth.

Ipana contains ziratol, a soothing and healing hemostatic and antiseptic that dentists have used for many years to stop bleeding after extraction and to strengthen weakened tissues. Indeed, it was through dental recommendations that Ipana first became known to the public, and today it is doubtful if there is another tooth paste so highly regarded by the profession at large.

Make a full-tube trial of Ipana

The coupon on this page will bring you the ten day tube—enough to prove Ipana's delicious taste and its remarkable power to clean and whiten your teeth.

But it's both simpler and quicker to ask for a regular tube at the next drug store you pass. You will then have enough Ipana for more than a hundred brushings—a much fairer test of its good effects on your gums. So make the full-tube trial of Ipana—very likely it will bring you a new conception of oral health and cleanliness.

Read what the dentists say! Though their language is technical their meaning is clear

From a text book on preventive dentistry:
"Unfortunately the use of natural foods has been replaced by highly processed substitutes from which the coarseness is removed."

From an address by a noted authority:
"The majority of us (the dental profession) would attribute the cause of dental disease primarily to modern diet."

From a radio talk by a well-known dentist:
"If you find that your gums bleed on touch, for instance, when you use a tooth brush—this is the time to take action. It is a signal sent you by nature that something undesirable is taking place in your mouth."

From a standard text:
"There are two ways of aiding low disease resistance in the mouth. One is to use the teeth in a vigorous manner in the chewing of coarse, fibrous food. The other is by massage of the gums."

Statement by an authority on gum disorders:
"One cannot help being enthusiastic when viewing the rapid improvement in the health of the dental tissues under artificial stimulation."

IPANA Tooth Paste

—made by the makers of Sal Hepatica

BRISTOL-MYERS CO., Dept. J-117
73 West Street, New York, N. Y.

Kindly send me a trial tube of IPANA TOOTH PASTE. Enclosed is a two-cent stamp to cover partly the cost of packing and mailing.

The Achievement of Success

SUCCESS and sound investment go hand in hand. Financial independence and freedom from care in later life are achieved with certainty only if one lays by money and invests it safely and systematically.

Thousands of investors have built up comfortable fortunes by investing in first mortgage bonds through S. W. STRAUS & CO. They are safe and they yield a good interest rate—as high as 6%.

A letter or a postal card will bring you valuable literature describing these sound and attractive investments, which are issued in $1,000, $500, and $100 amounts. Ask for

THE FAMILY'S PROBLEMS

When I Sent Our Baby to Mother My Husband Saw the Light

DURING the excitement and glamour of our engagement, I didn't see how our married life could be anything but gloriously successful. But our vows were barely spoken when I discovered the obstacle in the way of our happiness. It was pride and self-pity on the part of my husband.

We had been married about a week when he came home and told me he had thrown up his job. It seemed his boss didn't appreciate him—made him do all the dirty work. I suggested that the boss might have been trying him out for a higher position. But the only effect my words had was to bring on a fit of remorse. He assured me that he adored me, wasn't worthy of me, and only wanted to get a better job so that he could do more for me.

Time went by, and he had not found any job to suit him. Our funds were rapidly sinking. I was almost ready to look for work myself when he found something, not as good a job as he had before, but one with a living wage. He took it "temporarily." Until he could find something more in his line.

In a month he quit again. The salary, he said, wasn't a third of what he was worth to the company. He wasn't recognized as anything but a machine. No use for a man of his education wasting time on a job with no future to it.

This sort of thing went on for some time. Job after job he gave up because it wasn't worthy of a man of his intelligence, or because the boss picked on him, or because he was earning more than they paid him. On our fourth wedding anniversary, when Baby Patricia was ten months old, he was out of work again. And by this time my nerves were in such a state that I thought I could hear the wolf scratching at the door. He was always sweet and devoted to Baby Patricia and me, an ideal husband and father, except that he couldn't manage to provide food enough to satisfy our hunger or coal enough to keep us warm.

THE night of that miserable anniversary I was wakened by the intense cold of our heatless house. As I lay huddled in my bed, too cold to go back to sleep, I tried to face my problem and think things out reasonably and clearly.

I realized that my husband's self-pity was just a habit of mind he had got into. He knew his ability, and he couldn't settle down to any job because he kept seeing a better job ahead of him. And if I ever expected him to take the place in the world I knew he could fill, I would have to choke this self-pity before it strangled whatever ambition he had left.

I saw him in my mind's eye an embittered old man, going from job to job and still insisting that he wasn't appreciated or understood. I had seen old men like that. Then and there, I determined to prove to my husband that working, and working hard, is the only way to get ahead, and that menial jobs are not beneath his, or anyone else's, dignity. That night I formulated a plan.

The next morning I was out of bed early. I dressed Baby in her best and took her over to Mother's house, to leave her, I explained, until we could afford her again. Mother is a wise and tactful person. She didn't sympathize with me, or raise her hands in horror. She accepted her grandchild's visit without comment.

Then I started out to look for a job. Before my marriage, I had worked in a chemical laboratory. I now got a position as chemist's assistant.

THAT night, when I got home, I found my husband peering anxiously out of the window.

"Where's Baby?" he asked. "Where have you been? You know how worried I am when you two aren't here."

"Oh," I said, as airily as I could for the lump in my throat, "Baby is staying with Mother. As we can't keep her comfortably here, I was afraid her health would suffer. And, anyway, I had to get a job. I asked for an advance in salary to buy our dinner," and I deposited my armful of packages on the table.

Then came the storm of protests I had expected. His wife work? His baby be dependent on someone else? I was to resign. Baby would, of course, come back immediately.

But I stood pat. Until we had a bank account, until he had a steady income, we would leave Baby Patricia where she was, and not even visit her.

His reproachful gaze followed me mournfully as I went about my household tasks. I felt like a brute, but the thought of our bleak and foodless household steeled me. I determined not to weaken.

For three days nothing happened. I came home from work each night with provisions for the evening meal, to find my husband glumly awaiting me. I prepared dinner in silence, and we ate it silently. The sight of that empty highchair in the corner would have put a damper on any attempts at light conversation.

On the fourth night, he came in an hour later than I, his clothing dirty, his face dripping with sweat. He told me proudly that he had a job with a street-laboring gang. And I knew then that pride and self-pity had got their death blow.

From that night my husband's rise was steady. Before long he was made foreman of the gang. Soon we were able to save a little. When we had our first balance in the bank, I gave up my job, and on that day we went to Mother's to get Baby.

A little over a year has passed since the day we recovered the baby. My husband has an excellent position now, still with the same company. We have a respectable bank account, and are living within our income, saving something every month. Best of all, I have not once heard my husband mention anything about being overworked or underpaid! Beginning

Big Matt

By Brand Whitlock

ILLUSTRATED BY T. D. SKIDMORE

IT WAS not until long after midnight on that day of his inauguration that Governor Blake could get away from his prodigious popularity and be alone to think it all over.

When they returned to the Executive Mansion from the reception at the State House, he had thought that the day was done; but his wife had invited a few friends to supper—the Bannisters and old Amery, and that fellow Laurence Price; they were all down-stairs at that moment, so excited that they couldn't stop talking and go home.

He didn't like Price, with his youthful enthusiasm for civic reform; but Price was a state senator now, one of the accidents of the landslide, and he had to be decent to a state senator; he might want his vote some day. When he could stand it no longer he had slipped out and come up to the bedroom that was henceforth to be his.

He looked about the bedroom, as yet, to him, so strange; it had a kind of bland, non-partisan impersonality, like a bedroom in an hotel. He sat down on the edge of the wide, old-fashioned, walnut bed, in which so many governors had slept—or lain awake. He was pervaded by a vast and annihilating weariness; too tired even to undress.

What a day it had been! His ears were roaring still with its triumphant and tumultuous noises—the cheering that had greeted him along High Street as he drove to the State House at noon; the shouts that had reverberated under the dome as they passed through the crowds to the hall of the house; the applause that had combed over him in billows as he read his inaugural address.

And then that magnificent reception! There had never been anything like it; it thrilled him even to think of it now.

On election night, two months before, when, after figuring for a while in the small hours of the morning, big Matt Holt had tossed his pencil down definitively, and said, "Well, John, you're elected governor by the greatest majority ever given to any man in this state," Blake had thought that that was the great moment of his life.

But this day had brought the supreme hour of realization—governor at last! He couldn't help glancing back over his career (rather slippery some envious people had hinted), and yet what could be better than his biography in "Who's Who"?

Blake, John Wesley, son of Lemuel and Euphemia (Calvert) Blake. B. April 7, 1868; ed. public schools; taught school; studied law; admitted to the bar; married Grace, dau. Edw. B. Hawes; 2 children, Joyce and Edward Hawes Blake; elected County Attorney; member of the State Legislature two terms; State Senate two terms; Congressman, two terms; Trustee Carthage College; LL.D. Carthage College.

It showed what a poor boy in America could do, if he knew the ropes. At every step in that career Matt Holt had been by his side, serving him and his ambition with a steadfast and unscrupulous devotion. It was Matt's clever manipulation that had brought about his nomination after a long and stubborn deadlock in a perplexed and weary convention. And Matt, of course, had to be taken care of. But he wouldn't think of that just now.

He began to unfasten his collar, and was surprised to find that his hand was sore. He looked at it, sympathetically; it was swollen and beginning to ache. How many thousands of times that day had he shaken hands! And how the boys did wring it, though he hadn't noticed it at the time! The reception at the State House that evening had put the finishing touch on (he had refused to let them have an inaugural ball; he had put his foot down there. It wasn't democratic, and the church people wouldn't like it).

It had been no easy job to stand in line for two hours, smiling, trying to remember names, with Grace beside him, stunning in her new gray and silver gown, and the Lieutenant Governor and the other newly elected state officials and their wives—really, Grace ought to treat the wives a little more kindly, if only for the sake of, well—after all, they were in politics, and it meant as much for her as for him! . . .

MATT HOLT was in the line that streamed forever by. It had been rather tactful in Matt not to make himself conspicuous; Blake couldn't remember to have seen him at all during the day, though he must have been somewhere in the crowd.

As chairman of the State Central Committee, and as his campaign manager and, more than all, as his closest friend, Matt certainly had the right to take as prominent a place as he chose on this great day of the triumph that he had done so much to bring to pass.

But Matt had preferred to join the

Digitized by Google

STATE UNIVERSITY SYSTEM OF FLORIDA

anonymous crowd, to take his place in the line with the rest.

Blake could see him now, solemn in his black coat, his hair carefully combed, his large, red, smooth-shaven face, grave and serious; he was walking with Judge Wilkinson, of Allen County; Matt had paused, taken his hand, squeezed it, and looked up into his eyes.

"John," he had begun, in his heavy voice.

And then something had happened. Matt had suddenly choked up: his eyes had almost filled with tears; Matt had swallowed hard, and then, giving his hand a mighty squeeze, "Governor!" he had said, as though by way of correcting a slip, and added "Congratulations."

And then Matt and Judge Wilkinson had been swept on in the crowd. He hoped that he had been cordial enough in his treatment of Matt. What man had ever had such a faithful friend?

He got his collar off at last, in spite of stiff fingers, and laid it down, observing himself in the mirror of the walnut bureau: rather good-looking, he must own, in evening clothes, with his slightly gray, abundant hair, his smooth-shaven, somewhat pale face, broad, mobile mouth and brown eyes, glowing now with the fires of his suddenly awakened eloquence. Yes, rather good-looking; what you might call distinguished. In fact, like a Governor; maybe like a President. You never could tell; stranger things had happened.

He looked in the glass again. "Governor! You! Little Johnny Blake, that used to paddle around in the mud of Centreville in your bare feet! Governor! My God!" . . .

AND then he heard a rustle behind him, and turned, hastily (he mustn't be caught talking to himself, and looking in the glass!), and there was Joyce, running toward him, in her graceful young way; she stretched out her bare arms and placed her hands on his shoulders.

"I had to see you once more before you went to bed, and say good night," she said. And then she asked, "Happy?"

He looked down into her gray eyes, fixed on him in that affection which was the greatest thing in his life—greater even than the governorship—and he pinched her small round chin.

"Are *you* happy?" he asked.

"Yes, and so proud!" She stopped and dashed her hand across her eyes, and shook her head again, with a kind of imperious rebuke of herself. "I don't know what's the matter with me! I'm too silly! But, you know, I've felt like crying all day—" She put her head down on his shoulder, but only for an impulsive second, then she looked up and smiled, and said:

"It's only because I'm so happy! I must run back now and join them. You are tired. You must go right to bed."

"Eddie isn't in yet, is he?" he asked, in that inveterate concern for his son, for, no matter how smoothly things were going, there was always Eddie to worry about.

"No," Joyce replied; "but don't you worry about Eddie. This is a special day, you know."

She kissed his cheek, and turned to go, and then turned back again, paused, and whispered:

"Tell me—Mr. Price, who is down there—he's a member of the Legislature, isn't he?"

"Yes—in the Senate."

"Well, that's all, I guess."

He looked at her a moment fondly, studying her fresh, pretty, grave face. Their eyes met in the curiously complete understanding that had always existed between them. He loved her more than anything on earth. She had never given him a second's anxiety, as Eddie had.

He kissed her cheek, and watched her through the doorway, as the tall, lithe form in the pale blue dress—the bare arms and shoulders, then the head with the soft, brown hair—disappeared, by swift degrees, as she ran down the steps in the hall to the drawing-rooms below. Blake went to the window, thrust aside the curtains, and let them fold together behind him, shutting out the light of the room.

In the darkness of the world outside, the capital city lay under the sharp frostiness of the still January night. The cheers, the applause, the blare of bands, all the noise that had filled it a few hours before had died into immeasurable silence; in the cold and austere detachment of the lofty night he had a curious sense of loneliness, as though the world, which had so rapturously acclaimed him, had suddenly withdrawn.

But there, above the masses of bare elm trees, clear and distinct in a strange, unreal glow, he saw the dome of the State House. Palpable rays of light streamed like a comet's tail from somewhere out of that cold blackness, and, playing upon the dome, seemed to lift it up and isolate it in a white apotheosis.

Its cold, classic outlines suggested the early ideals of the Republic, and from the staff on the dome the flag, whipped by the sharp north wind, stood out stiffly, its red and white stripes flowing in that dazzling transfiguration.

Big Matt tossed his pencil down definitely. "Well, John," he said, "you're elected governor by the greatest majority ever given to any man in this state"

He remembered then that this illumination was one more manifestation in his honor, the Chamber of Commerce having placed a searchlight on the top of the First National Bank building to play upon the State House dome.

What a beautiful thought! What a typical triumph of American ingenuity! That artificial moonlight, bathing the dome of the State House and the defiant flag, was better than real moonlight—brighter, more intense. What a great State! And he, John Wesley Blake, Governor of it!

As he looked at the flag, a lump came into his throat; his lips trembled, then set in a new determination. A strong emotion swelled within him; he felt himself suddenly capable of great things; high resolves, vague but noble, formed in his soul.

He gazed on the flag, standing out so clear, so red, so white, so blue, in that vivid light, and his heart swelled with

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

atriotism, a sentimental blur gathered before his eyes. And e thought of his duty to the people and to their flag, flying ıus so strangely above them, in the night, while they slept; e would show them that an old machine politician had as ıuch idealism and could serve the people as well as anybody!

The colored butler brought the newspapers to the breakfast able the next morning. Blake's inaugural address covered n entire page. It had produced an excellent effect; all of the ditorials quoted that passage from the peroration:

> I do not know, my fellow citizens, how it may appear to you, but I n persuaded that that nation is happiest in which the government xists for the people, rather than the people for the government.

The newspapers, indeed, of that norning, exhaled, with the odor of rinter's ink and the fresh dampness f the press, that warm, comforting tmosphere of approval that had nveloped him ever since his election n November; and he felt that, vithout a doubt, on that morning, s he was about to take up his uties, he was the most popular man n his state.

BUT he mustn't show it; he mustn't let anyone see that he was mpressed. It was not for nothing hat he had been in politics all those years; it was just as Matt Holt had so often said, you couldn't tell which way the dear people would jump, or what they would do next. Better lie low.

Thus, he was rather sober at breakfast, and said little; indeed, they were all rather exhausted by the emotions of the day before and, besides, somewhat in awe of the colored butler. He had served in the Executive Mansion for years, and seen many a governor come and go; he dwelt under the protection of a civil service law of his own enactment, the only man in the service of the State who could survive the successive shocks of changes in administration.

As he moved softly about the table now, the Blakes looked at one another a little self-consciously, their minds, for once, united; they were thinking that it was rather impressive to be sitting at table in the dignified dining-room of the Executive Mansion, with a colored butler standing behind the Governor's chair. The Blakes had never had a man-servant.

Mrs. Blake's grateful appreciation of expert service was perhaps a little too frankly revealed in the smile she had for the colored butler. Eddie, who had come down late, his eyes slightly swollen, his hair very sleek and shiny, and plastered down as though to soothe the aching of his head, noticed her too conciliatory manner; and when the butler went out of the room for a moment, Eddie rebuked her for it, in that vicarious social concern which children feel for their parents.

"You don't want to look at him that way," said Eddie.

"Young man," began Blake, looking up from his sausages and buckwheat cakes, and addressing his son in his monitory tone. But Eddie interrupted him before he could get under way.

"Oh, you needn't talk, Dad!" Eddie said. "You treat him like a Pullman porter. You'll be calling him 'George' next."

"What *is* his name?" asked Joyce.

"His name," said the Governor, "is Johnson, Abraham Lincoln Johnson."

Digitized by Google
Original from
STATE UNIVERSITY SYSTEM OF FLORIDA

"The proper way to address him," said Mrs. Blake, "is Johnson. That's the way to speak to a butler." And having settled the question, especially as Johnson just then reëntered the room, Mrs. Blake, who hadn't ventured thus far to address the butler at all, allowed the subject to drop.

WHEN Blake arrived at the State House that morning his antechamber was already thronged with people, all of them with axes to grind—politicians of the old male and the new female variety, members of the Legislature to secure an early promise of places for constituents; office-seekers, smiling ingratiatingly, with an eager and esurient air, hopeful now at the beginning of that long siege which would not be raised until all the patronage had been distributed.

At sight of the Governor, they leapt alertly to their feet, under the stimulating illusion that he might begin to scatter showers of political largess even then; but he strode briskly across the room and disappeared in his private chambers.

Squire, the private secretary—first of the new appointees, already on the pay roll and installed in his job—though somewhat confused by the multiple details of new and unfamiliar duties, had been standing about, gossiping with the reporters, seeking, as not the least important of his functions, to make friends with them. But now he left them, and serviceably followed his chief into the private room.

Though two tall windows with inside shutters gave on the grounds about the State House, the room was rather somber with its dark walnut paneling, and solemn with its air of official dignity. Large leather chairs stood about in regular order; at the Governor's broad desk a leather-padded swivel chair spread its arms hospitably; beside the desk stood a not-too-comfortable arm chair for visitors.

It was a trifle lower than the Governor's chair and faced the light, thereby placing its occupant in a disadvantageous position, a device, so the tradition had it, of old Elijah Gates, whose portrait was somehow conspicuous among the stiff, official paintings of former governors that hung about the dark walls.

Blake, as new to his duties as Squire was to his, but not so new to the world of politics—Squire had recently been admitted to the bar, and his father, an attorney representing railways, had secured this place for him that he might gain experience—told Squire that he wouldn't receive any callers for a while.

Squire rearranged the piles of yellow telegrams and letters on the desk, and went out.

And Blake put on his glasses and began to read the telegrams. "Congratulations." "Hearty congratulations." "Warm congratulations and best wishes." "Felicitations." "You have the assurance of our loyal support, and best wishes for a successful administration." The letters were of the same tenor. These messages came from all parts of the state; some of them from other states; some from Washington.

IT WAS overwhelming; he could hardly realize that such boundless admiration and good will should be poured out upon him. He read them over and over; no, sir, there had never been anything like it; why, everybody was for him! At last he laid the telegrams down, let his glasses fall from his nose, and swung 'round in his chair.

He glanced up at the portraits of his predecessors, studying those solemn faces set in high collars and black stocks; some of the later ones, those in modern dress, of course, he had known; he tried to make out the names of the others. Two of them had become President; the reflection gave Blake a little thrill; he caught his breath. After all, why not?

He swung 'round in his chair in the other direction and looked out of the window, across the wide lawn, where stood a statue of Lincoln; he looked down toward High Street. A few flakes of snow were falling, drifting lazily down on the soft, moist air. A yellow tram-car was moving by. People hurried along the sidewalk, flitting across the tall iron palisades of the fence about the State House grounds like figures in a cinema.

All of them, doubtless, in walking by the State House had a thought for him—the new governor sitting up there. They were all for him, now, to-day. Blake thought . . . dreamed.

He was roused from his reverie, and turned, to see Squire standing hesitantly in the doorway, a rather uncertain smile on his smooth, young, ruddy face.

"Senator Morris is out there," said Squire, as though not quite sure whether the announcement would please or displease the Governor.

"Senator Morris!" exclaimed Blake. "Show him right in."

Senator Morris was already standing in the doorway.

"Hullo, Senator!" called out Blake in his heartiest, roundest tones, getting up from his chair and taking a step across the floor. "Come right in! Glad to see you!"

Senator Morris entered the room. He entered the room slowly, with a full consciousness of the importance of that act, as though his slightest movement were of historic significance. He wore a black morning coat, much too large, except where it tightened over the round belly. The morning coat yawned at the collar.

Above the morning coat was set a broad, smooth-shaven face, with flabby cheeks, and a wide, loose mouth; the lock of hair, on which cartoonists depended for resemblance, still fell over the scowling brow; but, as Blake noted, it was grown thin and white. Blake wondered if that solemn visage ever, in a long career, had been visited by a ray of humor.

Senator Morris bowed, the vast tails of his morning coat billowing about his thin legs; then, at a wave of Blake's hand,

Blake looked up at the dome, gray and blurred in the dark wintry sky. It was like a vast mind, in brooding meditation. What a lot of things that dome had seen—and covered!

She dashed her hand across her eyes: "I don't know what's the matter with me! I'm too silly! But, you know, I've felt like crying all day—"

he sat down in the chair, grandly leant back, and, his face in the morning light, looked at Blake.

"I thought you had gone back to Washington last night, Senator," said Blake.

"It had been my announced intention to return at once to the National Capital," said the senator, in a voice that rumbled in his throat, carefully articulating each syllable with exaggerated movements of his lips as though every word he spoke were the essence of wisdom.

"There are, as you are already doubtless apprised, matters of importance that are awaiting my consideration and that of the Senate. But, owing to the multiplicity of your official occupations yesterday, I was not afforded an opportunity of having a conference with you, and decided to postpone my departure until to-day.

"And, in addition, I desired to express to you once more, and to reiterate, my congratulations on your assumption of the important duties and grave responsibilities of the gubernatorial office. I apprehend that our party and our state are to be greatly felicitated on having you to direct their destinies. It is a matter of especial gratification to me personally, sir."

The Senator paused, worked his broad upper lip a moment, and then allowed his mouth to settle into that expression of consequential severity which it wore in repose. What, Blake wondered, was the old humbug driving (*Continued on page 174*)

"Thou Shalt Not Kill—"

By James Oliver Curwood

IF I did not believe a tree had a soul I could not believe in a God. If someone convinced me that the life in a flower or the heart in a bird were not as important in the final analysis as these same things in my own body I would no longer have faith in a hereafter.

As I write, a bird is singing in a butternut tree outside my studio window. A high-holder is hammering at a stub across the river which embraces my workshop in a gleamy curve. Each time I leave my door I pass under a grape arbor, and in this an exquisite mourning-dove is nesting. Within my vision is an island, a smothering, verdant jungle of green, with a forest of overtopping willows extending their slender arms down to caress the water, so that behind them are hidden pools of coolness and shadow in which wild things love to play.

This is not in the wilderness. It is in the heart of a small city of fifteen thousand people, where I was born, where I have lived, and where I hope to die. When I am ready to enter this most glorious of adventures, the mystery and privilege of death, I shall need no greater comfort in the first abysmal moments of its presence than these things—the grass, the flowers, the beautiful dove on her nest, the voice of birds, the rippling song of water, the inspiration and courage of the trees.

I am not writing an article on religion; but for me, Nature is closeness to God and I must go on thinking of it as such, and express myself according to my convictions. For me a tree stands not only for a tree but as a symbol of immortality. It is more than symbolic. It is proof. I believe that God is mightier than humanity has ever conceived Him to be, yet I think He is "a common sort of fellow," and I write these words with all the reverence of which the soul is capable.

I do not mean to imply that I think this Great Force is in my form, or in any particular form that I can imagine. But it is Life. It controls universes and billions of worlds. And the intention of this Force, this Master, this Mystery which we, on our fly-speck of an earth, call God, is that every living thing worthy of life be a part of Him, no one more important than the other, all equally necessary in a vast scheme which our puny minds cannot begin to encompass, all serving their purpose, all certain of their rewards if the kindergartens of experience, possibly embracing æons of centuries, have been employed to advantage.

I am almost Indian in this faith, and should be, because my great-grandmother was a Mohawk.

I have ceased to be a destroyer, as I once destroyed, and my ruling passion is to help wild things to live, from flowers and trees and birds and beasts to man himself, rather than to indulge further in the dominant sport of my species—extermination.

Because of this, as chairman of the Game, Fish and Wild Life Committee of the Conservation Department of the State of Michigan, I am not held in high repute by a certain predatory animal commonly known as the game hog. My desire to keep wild life from the point of extinction has made a multitude of killers call me a fanatic. Because I say we should spend as much money in the development and preservation of our forests as we do in the building and care of our roads, I am regarded by some state legislators as a person not quite properly balanced. Because I say that where there is one individual whose instincts lead him into the woods and fields to torture and destroy, there are fifty men, women, and children who want to go into those same woods and fields to look and listen and *feel*, I am accounted by some as a retrogressive factor in conservation.

Because I believe that life is life, no matter what form its habitation may be, and that the most inexcusable of sins is the taking of life beyond the point Nature has prescribed as necessary, I have found myself facing a mountain of opposition.

I HAVE often wished that some power might rise to show us how little and insignificant we are. Only then, I think, could the thorns and brambles be taken from the paths to that peace and contentment which we would find if we were not blinded by our own importance.

We are the supreme egoists and monopolists of creation. Our conceit and self-importance are at times blasphemous. We are human peacocks, puffed up, inflated, flushed in the conviction *that everything in the universe is made for us.* We look down in supercilious lordship on all other life in creation. We go out and murder millions of our kind with scientific inventions, yet we call a tiger bad and a pest because it occasionally kills the two-legged barbarian who hunts it. We seek to destroy a species, like the crow, because it eats a few kernels of our corn, then we ravage without mercy the homes and property of wild things, and call the action just.

If we kill a man illegally it is called murder, and we are hanged and go to hell. But if our Government tells us it is proper to kill a thousand men, we kill them and are called heroes—and a chosen place is kept for us in heaven. Our conceit blinds us to fact.

I believe that Christ was the greatest lover of nature that history has known. He was the greatest of conservationists. In his work he pointed out God—not through printed words but through the nature that was about him. The Book of God, as he taught it, was clearly intelligible to every race. It was made of the mountains, the plains, the vastness and glories of the heavens; of trees and blooming bush, of flowers underfoot, of birds

---

JAMES OLIVER CURWOOD is dead. One of the most popular fiction writers of his generation, one of the most ardent and courageous lovers of outdoor life, he leaves millions of devoted admirers to mourn him.

Only a month before his death, Mr. Curwood sent me this telegram:

"*Am working on an article for you which I have wanted to write for five years, and think is the best thing I have ever done. Shall have copy ready to mail you within week. Good wishes.*"

But it was nearly a fortnight before the article reached us, for the author was already in the primary stage of his fatal malady.

Almost at the opening of this, his last article, Mr. Curwood wrote:

> When I am ready to enter this most glorious of adventures, the mystery and privilege of death, I shall need no greater comfort in the first abysmal moments of its presence than these things—the grass, the flowers, the beautiful dove on her nest, the voice of birds, the rippling song of water, the inspiration and courage of the trees.

Before that message could be put into type the hand that had written it lay in eternal rest.

These pages hold Mr. Curwood's final plea for the conservation of our wild life, a movement in which he was a veritable crusader. He hated "game hogs" with an undying hatred, because he loved Nature with an undying love. Here you will find, simply and sincerely expressed, his creed of the wild.

THE EDITOR.

swelling their throats in song, of rivers whispering in the sunshine; it was written in the flash of lightning, in the rumble of thunder, in the crash of landslide, in the destruction of earthquake; its beauty and its majesty and its tragedy intermingled; it revealed death with life, happiness with sorrow, growing things with dying ones. Nature was Christ's God, and Christ's God was Nature. The two were one and inseparable, just as the two are one and inseparable now.

NATURE speaks to every heart in the same language. It is not Catholic nor is it Protestant. It does not belong to the High, Low, Broad, or Free Church. It does not lean to Romanism or Protestantism any more than it does to Mohammedanism, Calvinism, or the doctrines of the Latter-Day Saints.

God made the earth.

He made it for man. Everything is for man. Nothing else counts.

I cannot believe that Christ would say that, because each thought in His mind was toward conservation.

Nor do I believe He would say, "Thou shalt not kill." Instead, I think He would say, "Thou shalt not kill—except as it is necessary that thou shalt kill."

This brings us to one of the most important problems about which men and women can think. This problem involves a question which the human race, and especially the Caucasian part of it, has grown too self-important to ask itself, much less to answer. Just where does necessity end and wanton cruelty begin, in the instinct to kill? For ourselves we have invented the word "conservation;" but when we speak it or hear it we have only a rather hazy idea of the out-of-doors, the woods, the streams, wild life—and over this rides the predominant idea of slaughter, the elemental passion which has always inspired the animal called man to rend and tear the flesh of other living creatures, *and call it healthful fun.*

(Above) The Curwood outfit going down the Fraser River. (In oval) A recent picture of Mr. Curwood. (At bottom of page) Curwood before the cabin which he built in the British Columbia Mountains, and in which he wrote "God's Country" and "The Trail to Happiness"

BEHIND this terrific thought, which, given its fullest freedom, develops into a degenerative mania, there is the vitally important kernel of reason, of cause, and of the necessity to kill. It is by the exaggerated use of this fundamental law of nature, the law which tells us that to fight and to kill are requisites to progress, that we have given to death its unwholesome and frightening aspect.

Death, instead of rousing our horror when it comes to ourselves, should be regarded as the most beautiful of all things. There are just two events over

Smashing other people's idols was one of the things I did best

How To Make People Hate You!

I know that these recipes for unpopularity work because I have tried them all

By Marcus Eli Ravage

DRAWINGS BY C. H. SYKES

FOR a long time I had an uneasy feeling that my relations with people were not what they should be. You cannot go on forever losing friends without realizing sooner or later that something is wrong. At first I let it go at that. I did not deny that I was not as popular as I deserved to be. But the trouble, I whispered to myself, was that the world did not know enough to appreciate me.

Slowly, the full truth dawned upon me. I was forced to admit that something was wrong with *me*. It was a hard pellet to swallow, but it was an efficacious one. With confession came relief. As soon as I was ready to put the blame where it belonged, the tension began to ease up. Thank goodness, in the past year or two people have taken to talking about my irritating ways in the past tense.

I have gone back in memory of late in an effort to put my finger on the specific offenses of which I was guilty. The list is formidable enough to fill a book. In this article, I can describe only the ten outstanding ones that have been the most fruitful for mischief.

First in order comes my weakness for argument. It has probably got me into more trouble and lost me more friends than any other of my unfortunate habits. I just could not let a remark, however innocent and uncontroversial, pass unchallenged. That the other man was merely talking to pass the time and be agreeable was nothing to me.

"Wait a minute now," I would say. "I don't see that at all. I disagree with you entirely in this matter."

I recall an instance that is typical of scores of others. In the spring of 1924, my family and I were living in a small town near New York. Along about the first of May another family came out from the city to occupy the house next to us. My wife and the other woman soon became rather friendly. Our children and hers played together. But her husband, who was an engineer, was on the road a great deal and we did not see anything of him for more than a month. I was out in my back yard one Sunday morning when I saw him strolling over toward the hedge that separated our lots. The Democratic National Convention happened to be in session at the time, and as he got within speaking distance he remarked:

"Well, it looks as if Smith is going to get the nomination all right."

Now, I had been looking forward to meeting the man, and here he was taking the initiative and giving me the chance. I knew perfectly well, moreover, that he was not interested in Smith just then. He was merely breaking the ice with a timely topic. He might just as well have said something about the weather. But the argumentative demon in me swept my common sense aside, and, instead of agreeing with him and letting the conversation drift on, I replied:

"What? Smith? Not a ghost of a chance. You're all wrong."

I WENT on to give him facts and figures. My neighbor, a little taken aback by the political discussion he had so innocently provoked, listened politely, made one or two attempts to wrench the talk away to less serious topics, and, after a few minutes, gave up. Presently he found an excuse for getting away.

And from that day on he avoided me. Our wives remained friends. Our children continued to play together. But we two never

Dissatisfaction Guaranteed!

"THERE are many ways," says Mr. Ravage, "to make people leave you alone, but the following ten are the most effective I've practiced or heard about. Try them sometimes, if you want to lose your friends. But don't try them if you want to be happy!

1. "I don't agree with you at all." Insist upon starting a discussion, when the other fellow was only saying something to make conversation.
2. "I don't like your friend." Offer unsolicited critical comment about a man's friends or some member of his family. His wife or child will do.
3. "Anybody could do that." Minimize other people's accomplishments, especially those they are proud of.
4. "I know better." Offer authoritative information on every topic that comes up in a bunch of folks trying to have a good time. The nearer right you are, the surer you are to be disliked.
5. "I'll tell you exactly where you failed." Analyze your friends' mistakes and reverses when they are trying to forget them.
6. "As I was saying." Insist on dragging in your favorite topic among people interested in something else. If you can give it an air of being a subject that the group are too stupid or too ignorant to follow, so much the better.
7. "I thought you were going to—" Remind people of promises they made impulsively, or out of good-fellowship, but which you know they cannot keep.
8. "Let me show you how." Insist on holding the center of the stage.
9. "I used to think so a while back." Throw a wet blanket on other people's enthusiasms. If you can make it appear that their taste is antiquated, you will emerge superior to them, and they will love you all the more.
10. "That is nothing but prejudice." The surest way to succeed with this line is to pick on people's religious or patriotic sentiments.

talked again. If I ran into him on the street, he would greet me affably enough. However, if he spied me in the garden from his veranda, he either stayed where he was, or, if he did come down, he took the cement walk in the opposite direction. I was somewhat puzzled. I had not meant to offend him. But he had made up his mind, it seemed, to keep out of controversy.

ANOTHER time, this unfortunate faculty of mine proved even costlier. I had gone to great trouble and expense to get close to a man I wanted to do business with. I rented a house on Cape Cod where he had his summer place. I joined the same country club. I wasted hours 'round the links and on the tennis courts. At last we became acquainted. We were thrown together in one or two tournaments, and I was glad to find that we were getting on together very nicely. Then came the opportunity I had waited for: my wife and I were invited to his home.

In the course of the afternoon, I managed to get half an hour alone with my host. I carefully broached the matter I was interested in. He appeared well disposed. The situation looked bright. My goal was in sight. And then, at the last minute, came the crash. Among the half-dozen guests was a young army officer who seemed to be generally admired for his wit. At the table, he kept everybody laughing with his ironical, good-humored sallies. I joined in the merriment with the others. But presently he made what I took as a vicious thrust at a public man whom I regarded with the highest respect.

"Rot!" I suddenly heard myself say. "Where do you get that libelous stuff?"

A deadly hush followed my outburst. I had spoiled the party.

I could not let a remark pass unchallenged

Needless to say, my hoped-for deal never came off. My host, whom I had spent so much effort to win, cooled toward the proposition. He had set me down as a scrapper—as a man with whom it would be difficult to work.

My proneness to argument was not the most offensive of my trouble-breeding ways. It only was the oftenest in evidence. A good deal more irritating, as I look back at it now, must have been another unhappy trick I had. It may be summed up in my oft-repeated comment, "Anybody can do that."

During the war, a cousin of mine was invalided home, with the Croix de Guerre. I was fond of the chap and I thought highly of his courage and patriotism. He had been one of the famous Lost Battalion. But when he showed me his decoration with boyish pride, I began to philosophize about the accidental nature of valor in war-time, about the abnormal stimulation that the soldier is subjected to, and about the small regard that men show for the heroism of peace. And I ended up by mentioning two other boys I knew, one of whom had got the Legion of Honor, and the other the Victoria Cross. No wonder my cousin dropped in upon us less and less often, and finally ceased to come altogether.

When the son of a neighbor of mine was graduated from Columbia University with honors, I recalled that I had gone through college in three years, and had got a much-coveted gold medal besides. And yet for months I couldn't understand the coolness that sprang up between my neighbor and me.

SOME years ago an author friend of mine was elected to a certain well-known society of arts and letters. I ran into him shortly afterward, and took the occasion to congratulate him. It was a real distinction, and I was sincerely glad for him. But as we walked along together, my perverse streak came to the surface. I mentioned two or three writers I knew abroad who were members of a similar body in their own country. Then I spoke of the great traditions of that other organization, and of the long list of historic figures that had graced its membership. Incidentally, I pointed to several people of no particular distinction who had previously been elected to the American society.

In conclusion, I recalled—and, I am afraid, magnified somewhat—several small honors that had come my own way, and some of which I declined. These things did not look so big to a man as he grew older, I added reflectively. My friend was piqued, and he showed it.

I should probably be keeping up this foolish and hateful practice to this day if I had not in good time met my match. The trouble with me for a long while was that my friends were too good-natured to hit back

Dave O'Ramey—to give him a name—must have grown pretty tired of it; but not tired enough, it would seem, to drop me. So he took the only other course left him: he broke me of the habit by an object lesson that could not be lost on me.

Dave has for a number of years been writing a daily editorial feature for a syndicate. It (*Continued on page 152*)

I must not overlook my habit of minimizing other people's honors

Dick Byrd—Gentleman

By Fitzhugh Green

"NAVY—0 VISITORS—0"
Last quarter just starting.

THE setting sun casts a reddish glow against structures behind the field of battle when the first score comes: A spiraling punt, then a grimy crouching figure into which it disappears. Like a shot, the player is off. Gracefully he eludes the first attacker, half stumbles at the second, is protected by his own backfield against the third—fourth—fifth. . . .

A booming roar arises from the stands. Aged men and dignified old ladies struggle to their feet with all the others.

The runner is free!

Across the enemy goal line, squarely between the posts, speeds the slender figure and drops, a huddled patch of dirty blue and gold, against the brown turf underneath.

"*Four N yell, one Navy, three Dick Byrds!*" scream the cheer leaders.

"NAVY—6
VISITORS—0"

now reads the scoreboard.

A final kick-off. A few minutes of frantic effort by the desperate enemy against an impenetrable Navy defense, and the game is done. A snake dance over the field. A glorious day of days, a day that admirals remember and talk about when they command whole fleets of mighty battleships.

The team fights its way at a run through the crowd that is milling over the field in the dusk of early autumn. In the dressing-room coaches and players corner the hero, quarterback of the Navy football team.

"Great stuff, Dickie!"

"You showed 'em, fellow!"

But when the din shrinks a bit, and the grimy, happy lad can make himself heard, he spiritedly retorts, "*Yes, but I had ten good men to keep 'em off, didn't I?*"

Fifteen years pass. . . .

Muffled in oilskins to keep out the driving snow, stands the same slender navy quarterback braced against his steamer's bridge rail and peering out across the jagged floes that choke the little Spitzbergen harbor.

"Shall we anchor, Commander?" from the forecastle.

A second figure steps to the leader's side and swings an arm toward the only dock, where sulkily lies a small freighter, refusing to give way to the American expedition, for the very good reason that her own Norwegian countryman is hurtling north in his dirigible in hope of winning first honor in the great polar air race of 1926.

"We can't make her move, sir."

The words spell failure to the expedition, or what is paramount to failure; for first honors count nearly all in this curious human striving to do big things.

"Very well, Mulroy; anchor."

"But the plane, sir?"

The leader's sensitive lips go a shade tauter. Better than any he knows the big risk he is taking.

"We'll run her in over the ice."

"Impossible!"

Mulroy's mouth frames the word. But when he catches the look on his commander's face he does not utter it. Instead, he seizes a megaphone and hurls strident, rapid orders into the gale.

Hatches spout men, who struggle with frozen gear across the slippery decks. The ship anchors. The giant plane is hoisted out.

DAYS slip by, each twenty-four hours long. By ice raft and man power the ponderous monoplane is hauled ashore and up its snowy incline. The sleepless leader never seems to tire. His rival, Roald Amundsen, drops down out of the sky in a hulking airship. So close is the race that its very suspense is a burden upon the Americans.

"Looks good," says the leader simply, when the great moment comes to decide upon the weather. In ten minutes he is up and away: the first man to fly across the North Pole!

He succeeds. He returns home. New York greets him with that gay frenzy which only New York can attain. The same night, in Washington, before three thousand guests chosen from the most prominent citizens, the President of the United States pins upon the hero's breast the highest medal that can be given for such a feat.

Deafening applause. Then, silence, as the audience strains forward to hear Dick Byrd's first words. These words have changed but very little since football days:

". . . *Yes, but it was my men who assembled the plane and took it ashore, as well as Bennett, who dared to go with me, that made it possible.*"

Modesty. Generosity. Two words: the man.

Richard Evelyn Byrd was born in Virginia thirty-eight years ago of a family that had for three centuries been makers of American history. His lineage goes back to the Norman, Le Brid, who once based on Ver-sur-Mer in northern France, the very spot where Dick long afterward landed in his monoplane, in which he and three companions had flown across the Atlantic.

HIS father was a successful lawyer; his mother a famous Southern beauty. One brother now is governor of Virginia; the other is a grower of fine apples and pedigreed cattle.

At twelve Dick was a normal, bright-eyed youngster with just one unique trait: he wasn't content with the day dreams of the other lads his age; *he* wanted them to come true. When he proposed a trip around the world alone to his horrified mother, he wouldn't take "No" for an answer. He went. There was no fuss about it. He wasn't the kind who makes a fuss about such things. He had an itinerary laid out in advance, a credit or so on the way, and a burning desire to see if his geography had told the truth. This journey was the first record he made; and so was prophetic of his future.

In 1908 he entered Annapolis. I had just finished a third year there. Some weeks later the following colloquy took place between us two in a corridor of Bancroft Hall:

"Hey, who are you?"

"Midshipman Byrd, suh."

"Where from?"

"Vuh-ginia, suh."

"Think you're good-looking, don't you?"

"No, suh."

"All right"—savagely—"forward, march!"

"Aye, aye, suh."

But there was (*Continued on page 75*)

What's the Sense in All These Reckless Flights?

IN 1926 Commander Byrd flew over the North Pole. In 1927 he flew across the Atlantic Ocean, from New York to France. He is now preparing to fly over the South Pole. With a friend he was discussing his plans.

"But, Dick, what's the sense of all this? What good does it do?"

The intrepid young aviator smiled that fascinating smile of his.

"If you stop to reason it out," he replied, "you will see that these stunts add to human knowledge and spread control of the earth by mankind." And then, leaning a little closer to his friend as if he were confiding a secret, he continued, "But I have a hunch that the real value of it lies in sort of keeping things moving—egging other fellows on to do something bigger. Like the old game of banter. Don't you remember it?"

COMMANDER RICHARD BYRD, U. S. N., has won the admiration of the world not less for his achievements in aviation than for his modesty, generosity, and sportsmanship. Byrd entered the U. S. Naval Academy, at Annapolis, in 1912, and was graduated four years later with every promise of a brilliant naval career. Retired, because of an injury to his foot, before he passed the rank of lieutenant, he prevailed on the Navy to use him as an aviator. Since that time, eleven years ago, he has never been off active duty; and flights across the Atlantic, across the North Pole, twenty-one citations, three promotions to higher rank, decorations from our own and from foreign governments, indicate that he has been busy. He is married and has four children. (Below) Unloading Byrd's plane, the "Josephine Ford," in Arctic waters.

Ernest T. Trigg

MR. TRIGG has had extraordinary opportunity during his long career to study the college man and the so-called "uneducated" man in business, and in the accompanying article he gives you some of his very pointed conclusions. He is now president and general manager of John Lucas and Company, of Philadelphia, and is a director in numerous other large enterprises. In addition to this, he is active in civic matters, and has rendered valuable service in many capacities outside of his business affiliations. Mr. Trigg was born in Aurora, Illinois, in 1877. He came to John Lucas and Company nearly twenty years ago, first as general manager. This picture shows him on his farm near Philadelphia.

Do You Need Brains To Get Ahead In Business?

By Ernest T. Trigg

WHY is it," a perplexed friend recently asked me, "that so many uneducated, stolid sort of men rise in business, while hers of education and brilliant minds l?"

My friend was of that type which places st emphasis in rating another on purely ental equipment. Carefully schooled and a bookish turn himself, independent ough in fortune to be free of the necesy of worrying about his livelihood, he as nevertheless quite agited over what he chose to gard as Fate's "most unuitable distribution of reards in business life."

"Business," he kept insting, "has no room for ains!" He was almost tter in his denunciation. ne of his close friends, it d happened, a man of unestioned mental caliber, t long before had gone on the rocks of executive ilure; and, as if to rub salt to the wound, the position hich he had held at the ad of a company founded his father was now filled an ex-mechanic, who, hile thoroughly capable in business sense, had no ore intellectual culture an a good-natured bear. hat was more, the former echanic, who made no etense at brilliance, was pidly reëstablishing the mpany which his brainy redecessor had almost recked.

"I could understand it," ntinued my friend, "if Tom had not ied; but he did try. He gave his best to e business, worried about it, sat up ghts. All that any man could do, he did."

Just to make the record complete, he ight have added that his friend had made important changes in the company's ecutive personnel and policies. He had ade no startling improvements; but ither had he made any glaring mistakes. here was no one act of his on which a agnostician could place a finger, and say: Here was your fault; you failed because that."

THEN why had he failed? He had education, ability, health. He had worked relessly. He had not been hampered by ck of money, and he had been open to lvice. He was not unpopular with his ssociates. To requote my friend, Why *do* many men of this sort make a fizzle in business, and why *are* so many of our great concerns headed by former office boys, janitors, mechanics, and blacksmiths? Are brains a help or a handicap in business?

It is an interesting question. I have known business men who positively would not hire a college-trained man. There are hundreds who shy from the palpably brilliant man. And I could name at least one leader of business with an income close to a million dollars a year, who asserts bluntly and loudly that brains cut very little figure in profit-making. "If brains were essential to business success," says this man, "I would still be driving a delivery wagon. I have clerks in my employ who are smarter and better educated than I am. I have men who can write three scholarly degrees after their names, but who'll never earn more than five or six thousand dollars a year."

The latter statement could be made by the head of virtually every large business. Specialized departments of big corporations are filled with brainy men whose salaries, when compared with those of chief executives, are insignificant.

Let us concede at the outset that there is a reason for this condition, and that the reason is based on sound practice. Boards of directors, which are elected by stockholders, have their eyes fixed on a single goal—profits. Their votes are cast for the man who, they believe, can produce profits, regardless of the color of his eyes or what school he attended. The question is not, "Does he know Latin and Greek?" but, "Does he know business?" and, specifically, "Does he know this particular business and can he *make it pay?*"

Profit, in a word, is the gauge of business success. Wipe out profits, and you wipe out business and the motive for its being. Your gas company supplies you with gas, which is a service; but it exacts more for the service than it costs; the railroad conveys you to your destination and meets a public need; but its stockholders expect a dividend on the investment they have placed at your disposal.

Keeping this fact of profit in mind, at once it becomes evident that when the chemist remains a chemist while the sales manager becomes president, it is because the chemist is not regarded as a profit producer, whereas the sales manager is; that when the college man fails to rise to business leadership, it is because he has not passed the *test* for that leadership. The fault certainly cannot be with business, for business cannot help itself in the matter of profits if it is to exist. Then the fault, if you care to call it that, must be with the man himself, or with his training.

Keep in mind, however, that we are not discussing life, but only a single phase of it—the business phase. I do not attempt to go beyond the facts as they are true in business alone.

To be explicit, suppose we summarize it thus: When what we call "brains" are productive of profits, they are wanted in business by all means, even sought by it; but when "brains" are not concerned with profits, business, of necessity, has no use for them. The mere fact that a man is brilliant and educated is not a business qualification. The fact that he is a profit producer, on the contrary, conceivably may qualify him, though he lacks everything else.

There are men of wonderful intellect and education who are profit producers. Numerous of our big corporations are headed by these men, as proof aplenty that business does not bar brains. The question of brains in business, then, does not involve a class, as my friend seemed to think; it is solely a question of adaptation of individuals.

Moreover, these (*Continued on page 100*)

Money—Money—Who Gets the Money?

"WHEN brains are productive of profits, they are wanted in business," says Mr. Trigg; "but when brains do not help to make profits, business is not willing to pay for them. Specialized departments of big corporations are filled with 'brainy' men whose salaries, when compared with those of chief executives, are insignificant. A brilliant chemist, if his employer is liberal, may receive from a great corporation a bonus of a few thousand dollars for a discovery that makes possible a new product; but the sales manager who creates a market for that product may draw the amount of the bonus in his monthly pay envelope. The purely technical man rarely achieves the direction of big business, even when the business itself is technical in nature. At first blush this may seem unfair; but it's all a part of the game of profit and loss."

David ascended the stairs—three at a time

Ask Any Father

A story

By William Dudley Pelley

Illustrated by George Giguère

A HEAVY rubber-tired hack, drawn by black horses, turned into a Vermont town side street in early autumn dusk.

Along under naked maples it rumbled, jounced ponderously on cross-walks, broke through brittle surface ice on tops of puddles, to halt before a nondescript two-story house where the street ran out in pasture.

A door of this vehicle opened. A young man descended.

He did not step down as though expecting anyone in the house to receive him. He alighted and closed the hack door dully, impersonally. The bewhiskered old driver looked down in compassion.

"Anything special I can do for you, Calvin? I know how hard to-night'll be. Been through a coupla such nights m'self."

"No, no, Mr. Fodder. I'll be all right. Just send your bill when you get around to it—"

"Pshaw, you don't pay me nothin'. It's all included in Blake Whipple's bill. Sure there ain't nothin' I can do for you, Calvin?"

"No, no. You've been mighty kind, Mr. Fodder. Everybody's been kind. It's just up to me to pull myself together and start all over."

"I s'pose so, Calvin. Well, you got my sympathy, such as it's worth." And the driver tightened his reins, spoke to his horses, and swung the hack in a graceful circle. A moment later it had gone down the street.

Left alone in autumnal quiet, the young man stared at the house. The down-stairs tenement appeared unoccupied; its shutters were closed. An upper kitchen window at the rear showed a light, but the structure had a forsaken aspect, and the young man shivered—as though he and the domicile had much in common.

A SHARP-FEATURED woman with rusty gray hair and work-gnarled hands turned with nervous solicitation at the young man's entrance. He came into that upper kitchen with an expression on his face not of weariness but of *age*.

"My stars," she cried, "is it over so quick?" She wore a bluish house dress and red worsted shawl. Any community of the nation would quickly identify her as "a neighbor."

"Why not, Mrs. Thurston? What was there about it that should take any time? Where's the boy?"

"Sleepin' in the sitting-room."

"Well, I don't want to trouble you any more, Mrs. Thurston. Your own husband will be coming home and wanting his supper. We'll get along all right."

"But I ain't got your baby's food—"

"I'll look after it, Mrs. Thurston."

"But you're goin' to get a woman in, ain't you? Somebody's got to look after this place. You can't keep to your work in the mill and leave a little baby."

"Yes. . . . I suppose so. To tell you the truth, I hadn't thought that far ahead. I don't know yet just what I will do."

"Most men in your fix would board the baby out."

"Board him *out!*" The young man turned in the act of pulling off his overcoat. His mouth tightened harder. "If anybody's going to take care of Davy from now on, it's going to be *me!*"

"You mean you're goin' to keep up this home an' everything?"

"But there's nothing else I can do. . . . There's nothing else I want to do. I'll find someone who'll come in and stay through the days. As for the nights—I'm glad I've got him. . . . Davy, I mean. I don't know what I'd do without him. Never mind how he turns out, Mrs. Thurston, he'll always stand for one year of absolute happiness in my life. Never mind what other years ahead may bring, the one year that's passed will always be . . . sacred."

Tears filled the man's eyes then as he turned to hang up his coat. They got into his voice, so he said no more. But as he started for the sitting-room door, Mrs. Thurston—who had reached for her hat—cast it from her impulsively.

"John Thurston can get his own supper. I'm stayin' right here until you feel better. I guess I know my duty when I see it. I'll get you some vittles and you're goin' to eat 'em." Saying which, to hide her own emotion the good woman began pushing and shoving stew-pans and kettles vigorously about on the stove top.

The man went into the sitting-room. A shadeless oil lamp, its wick turned low, burned on a shelf between two windows.

STATE UNIVERSITY SYSTEM OF FLORIDA

ts dim light revealed the location of a baby's crib between the enter table and a sewing machine—now forever quiet.

He reached for the lamp and set it down on the table. He ulled a chair alongside the crib. He sank in this chair, bent ver with elbows on his knees. Mutely he studied his child.

It lay on its side, face toward its father. Faintly, regularly, ame the breath from its tiny lungs. Toylike hands with small ink fingers curled—were clasped before its face—tender, agile hands, absurdly weak to grapple with ruthless adversaries in the years which stretched ahead. Out from under the annel blanket had been thrust one chubby foot.

The wobbly pinkish head, the contour of eyebrows and eatures, the tiny damp eyelids, the rosebud lips, the small oist chin, these the man saw as through a mist. And the nterrogation written large upon those baby features, even in umber, he tried in dumb anguish to answer from his own hard nowledge of the world and Life.

Calvin Peck spoke scarcely a word, not even a whisper, in e sitting-room with his son that night, while the Thurston oman prepared his supper. But the thoughts that he thought ere long, long thoughts. . . .

A comradeship existed now etween this sleeping infant and imself which had not existed itherto. There was no bitterness in the man's heart for what ad happened; only a deep, unpeakable, overwhelming gratitude that in the aftermath of the agedy there was one who hared it, even though years and ears must pass before the child ame to realize the burden it ad borne.

SPRINGS, summers, autumns, winters—season upon season, ear upon year—these stretched head for the sleeping boy. Days of happiness and nights of eartbreak; weeks of delirious nticipation; months of cruel isillusion; interludes of hope; eriods of triumph; hours in ethsemane—God has decreed at Everyman shall know them.

So Everyman sees in his boy e mirror of himself: his own rials, his own testings, his own spirations, his ambitions, his innings, and, alas, many times, is Calvaries. And Calvin Peck, the greatest Calvary of his fe, projected much of his own life ahead r his son, and was mellow with thankfulness that he was privileged to be the one walk beside the lad and point Life out him . . . "as rivers that water the oodland, darkened by shadows of earth, et reflecting an image of heaven."

His boy must be something finer and etter than *he* had been, or would ever be. n the son all the unvoiced urges and asirations of the father's heart must ower. As the lad attained manhood, he ust stand forth for what the father light Have Been—and for that attainent the father stood ready to pay all the osts.

It was a Saturday afternoon in June, he year that little David Peck reached urteen, however, before the first real ntimation of what might lie in store for both of them ame to the man who on that empty November night ad made his sleeping son a Promise.

The firm of Prentiss and Sibley had lately merged ith the Thorne Knitting Mills, and Calvin's prospects ere looking up. Hard work had raised him to be plant uperintendent.

Yet it was *only* plant superintendent. Fifteen years f his early maturity had gone, and he filled no greater iche in the universal scheme of things than overseeing the manufacture of twenty gross of union suits each day up in a mountain-locked little New England town.

The man was tired. Spring hillsides were calling. Something higher and finer and better in earthly existence was calling, something that would feed his soul, lift him from an environment of crass machinery and flashing needles up onto a social stratum ". . . where calm-eyed people walked the summits of life, and the east was ever a sunrise."

David came into the room.

HE HAD grown into a sandy-haired, blue-eyed, sturdily-built youngster, with omnipresent grin and two ready fists. Calvin was increasingly proud of him. He was *all man.* And yet there had been times when the father wondered if he had not erred in giving him no foster-mother, who might have supplied a feminine touch to the lad's character and impregnated his subconscious with a sense of the delicate and beautiful.

"Boy," proposed the father, "let's take the afternoon off and go for a stroll in the hills. I want to talk to you—"

"Aw, hake, I don't wanna go walkin' over hills! I gotta date to go down the river. A lot of us kids are makin' a dandy

The yards where Calvin found his boy were a pandemonium of profanity, shriekings, rivetings, whistlings, scrappage, and bewildering clutter. When the father recognized his son, his sight wavered

water-wheel over on the East Fork."

"A water-wheel!"

"Yeah. An' it works swell. . . . You oughta come an' see it!"

"I'll be glad to come and look it over, son," the man agreed.

After all, his suggestion of the walk in the country had really been to get acquainted with his son—or to stay acquainted with him—despite the time his work demanded. Perhaps he could maintain that camaraderie in inspecting water-wheels as well as in watching butterflies or reading extracts from the classics.

Calvin went and looked at the water-wheel, and came away later thinking moodily. He had every reason to be proud of his son's mechanical turn of mind, and yet in another way it seemed so sordid. It seemed sordid to him because it must lead only to an existence in maturity circumscribed even as the father's had been circumscribed.

Calvin felt that he had sold his life to cogs and wheels and spinning bobbins—which epitomized manufactured products necessary to earthly life perhaps, but which assayed down at last to not much more than the making of money. Water-wheels belonged with these. They were things rendered unto Cæsar; whereas, deep in his intimate heart, the father had a blind, throbbing ache to have the lad for whom he was slaving render unto God—

Still, Calvin was too wise a parent not to be grateful that his son was showing any proclivities at all. He would not consent to David's leaving school when other boys took jobs at fourteen to help support families or to earn their own spending money. If he were mechanically minded, the father was cheerfully willing that the lad should go through technical college and perchance become an engineer.

But to become something outside and above the Great Middle Class was the thing!

Then, in the youngster's nineteenth year, like a bolt from the blue, came an episode which the town, as a town, has not ceased to talk about on occasion, even down to the present.

CALVIN had worked late at the mill one night, supervising the installation of new machinery. David's hysterical 'phone call implored his presence at home. As he opened the front door the son stole fearfully down the stairs to meet him.

"Dad, you come through town, didn't you? Did you . . . *hear anything?*"

Calvin hooked his cheap straw hat mechanically on the hall tree. A presentiment came to him that he was about to pass through one of life's great crucibles.

"What was there to hear, my son?" he asked.

The son averted his glance. His face was deathly pale. He began walking the lower hall with hands thrust deep in his trousers pockets. His hair was awry. Dried blood smeared his lip.

"Dad, I gotta have some money—quick! I gotta get out of this place. If you won't gimme some dough, I gotta hop the Boston freight."

"In God's name, son, what's happened?"

Tears swelled into the lad's eyes then, and with a great heart wrench the father saw him as still the motherless young tad who had not yet learned to sidestep earth's pitfalls, who . . . perhaps, had already plunged down one of them.

"I gotta get out o' this place—to-night!"

"What have you done? Out with it! *Everything!*"

"It wasn't my fault, Dad. I swear it wasn't my fault. B-b-but—I got into a fight—on Cross Street—with Mickey Blodgett."

"You got in a fight over what?"

"It—it—was over a skirt, Dad. A girl. I laid Mickey out c-c-cold."

Calvin reached for his boy and gripped him. "You laid him out cold!"

"He never . . . moved, Dad . . . after I biffed him."

"Great heavens, you haven't done *murder?*"

"I don't know, Dad. I just gotta get out of this place, that's all. I gotta—"

"Over a girl, you say? What girl?"

"Lizzie Taro."

Calvin reeled. Poor little Lizzie Taro, slovenly daughter of the town's worst drunkard—his boy had fought a man for *her*. But his face grew strong:

"See here, son. If you're a lad of mine there'll be no running away. You'll stay right here, and face the music—if there's going to be music."

"I can't, Dad, I can't! I picked the fight. I struck him first—"

"NEVER mind. Stay, and face it. If you're responsible, all I own will go toward making your punishment light. If you're not, they can't punish you at all. But as for running, like a craven coward—"

"I'm not a coward. But I'm in dutch with the bunch at the Process Works—Mickey's friends. They'll swear I—"

Voices were heard outside in the street. They came nearer—into the yard. Heavy footsteps on the hollow veranda followed. The voices of many persons—abrupt, ear-splitting knocks like thumps on a coffin—these Calvin heard as in a daze. He moved toward the door, recognizing the demands of Chief Hogan.

In that instant David ascended the stairs—three at a time.

"Mickey's not dead, Mr. Peck," the officer subsequently announced when the door had been opened upon a group of ugly-faced men. "But I'll have to take the boy for assault and battery."

"David!" cried the father, calling up the stairs.

No David answered. The boy had sped through the upper hall and into his bedroom. Locking the door, he had fled by a window, down over the roof of the porch.

They never caught David Peck.

When house and neighborhood were finally quieted, Calvin went to his room.

It was a peaceful August night. The valley was flooded with moonshine. The father walked to the south window and stood looking out upon the sleeping countryside, where the tree toads were trilling and the stars were very high. . . .

"God in heaven," he begged brokenly, "where have I erred? I dreamed so much—and it's come to *this!*"

Soft breezes of evening wafted the curtains. A switching engine coughed faintly on the other side of town. The world was dreamy and old—and sadly beautiful.

To the man in those moments came memories of another night, back across the years, when he had studied a sleeping boy-child lying on his side in a homemade crib—toylike hands and exquisite fingers clasped together before his face, absurdly weak then to grapple with ruthless adversaries in the world ahead.

Now, somewhere out across those moonlit miles, that same son might be clinging with death grip to the truss rods of a hurtling, rocking, thundering freight, in horrible peril of mangling beneath the shrieking wheels. Calvin gripped the lowered window sash in the agony of his despair.

THAT night was his real Gethsemane, the final Gethsemane of every parent. No matter how watchful the care, how great the solicitude, how overwhelming the advantages and opportunities and enticements and awards that have followed a lad through boyhood, inexorably come those years when the passions of a man are unleashed, while his body is still controlled by the judgment of a little child. Those are the anxious years, in which the parent may do nothing—except to suffer and pray, and dare to hope that God is in His heaven.

"Into Your hands I deliver him," Calvin whispered huskily, eyes closed. "Keep him and watch over him. I've done my best. You too have been a father. You can understand."

Calvin's hair whitened almost in a night. *That* night!

In the week which followed, he went to old Jim Thorne. "I'm quitting the business, Jim," said he. "I've had enough."

"You're quittin' the business! What you aimin' to do, start on a hunt for your kid?"

"The world's too wide, Jim. I wouldn't know where to look. Besides, what could I do that I haven't done already? The boy's different from me. It seems almost as though our paths were meant to separate from the first. And perhaps it's on the Books that such an experience is exactly what Dave needs to show him what a father really means in his life."

"What you goin' to do with yourself? You can't hang 'round and mope."

"I don't intend to mope, at least more than I can help. I've got quite a little money saved that was going to pay for Dave's college education. Seeing he's never given a rap for a college education, I guess it's all right for me to buy a few things I've always hungered for for myself—without exactly knowing how much I hungered for them."

"What, for instance?"

"Books. A few pictures. The right kind of a house to keep them in, where I can properly enjoy them. There's a lot of reading I've wanted all my life to do, and never had the time: geology, biology, law, travel. I'm not exactly what you'd call artistic. But there are lots of things that trim life and make it worth living that I've never had time to do. Now my anvils and millstones have sort of dropped away. I figure I can do it with a clear conscience."

"Ain't gonna leave town, be you, Calvin?"

"No, no, I love these Green Mountains too much. Think I'll buy the Winship house out on the Bryant's Corners road, and for a sort of work go into another thing I've always wished I could follow up—dogs."

"Dogs! Whatta you mean?"

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

"Raise 'em. etters. I had one nce, years ago. le lost his life aving the life of a ttle child. I've ever gotten over ıy love for the reed. Maybe you ɔuld call it a sort f monument to ıat dog's memory I went in for a ennel."

Jim Thorne sat ı thought a long me after Calvin ad left him. Poor Cal," the ıill man sighed. Wife and boy ɔth gone, and he ıst wants some-ıin' to love . . . ıat'll love him ıck. So he turns ɔ dogs. Well, ell. Lots o' orse things a man ɔuld love than a ɔg!"

THE ex-superintendent of the cal knitting mills ıd buy the Win-ıip place; he got housekeeper to ɔ out there with im, erected some ıutbuildings, ought two fine ıordons, settled own to live as est he could in is new incarna-on. And tried to ɔrget.

But where is ıe man who can ıccessfully forget son if that boy e still living?

The boyhood reams that he as watched on ıe face of his rowing young-ɛer, wonderings at he phenomenon f the universe as unfolds before im, the tragedies f childhood and ıe heartburns of dolescence as they ame with the ears, memories of nall tightly set ps when pain of ody or soul was borne stoically, because ɛoicism is the first attribute of a man, ays when the father had tried in mute nguish to get close to the soul of his ıd, and made the discovery that they ɛre two different persons—how many ours the man lived these over while is eyes were mechanically fixed on his andiwork of the moment!

Nights came also when he thought of his ɔn battling the world alone, and awoke to ıncy he had heard wild, pitiful cries: "Father! Father!" coming as from a little boy lost in the tortuous immensities of a desert. And the father could not respond, because he could not tell whence the boy was calling. What man could forget?

"Merciful God! . . . That's my boy's ship! . . . My little son Davy. *He made it!*"

FOR David stayed away. He might have lost his clutch on the truss rods of that Boston freight and been mangled beneath its wheels that August night, for all the father knew. Having little in common with Calvin temperamentally, and fleeing Vermont under the onus of what he assumed to have been a tragedy—communication with the father meaning apprehension—David's silence was not unnatural. For over ten years Calvin Peck had no son.

In an austere little white house with red blinds out on the Crossing road, he lived—a well-kept little house up on a walled banking behind some maples. Out behind an equally trim white barn were some puppy runs; (*Continued on page 97*)

The Time To Teach A Child And The Time To Leave It Alone

By Angelo Patri

THE growth of a child is a rhythmic process, each step in due season, each stride forward in the ripeness of time. Successful teaching means the understanding of this rhythm, the seizing of this instant of highest power, the setting of the child in the attitude for getting the best out of his moment of high opportunity.

Browning sighs at the nicety of life's adjustments:

> Never the time and the place
> And the loved one all together!

Something of the same difficulty underlies the teacher's sigh, "I can't teach that child! He won't pay attention. He isn't interested in his lessons."

We know to a day when to set potatoes. We know to a day the length of the growing season we may count on for them. We follow the market curves, and decide whether to sell or to store. We know the tides, and we sail our ships to their rhythm. Our traffickings are done to the rhythm of established laws, well understood and cautiously obeyed. But teaching? Education?

We know now that there are distinct seasons of growth in the lives of children, one spiraling about another and another as long as growth lasts. We know that at the height of each growing season we can teach the facts and principles and processes of that period under the best possible conditions and with the best results. We know, too, that if, through neglect or ignorance or any other cause, we let that season slip by without putting in our best teaching there will result a loss of power that can scarcely be made good.

In the period of infancy, the first two years or so, a child learns to sit up, to stretch his back, to creep, to walk. He makes a great effort, takes punishment each time he falls, undergoes fatigue, overcomes resistance, always impelled by his great desire to walk—at this time. If for any reason his walking time goes by without his learning to walk, it requires great effort to induce him to make the struggle and he is usually handicapped for years to come.

Close to the walking period lies the talking period. They overlap each other, and are equally imperative hungers of the emerging child. Speech is a tremendously important power, expressing as it does the content, the quality, the very essence of the intelligence of the child. From two to seven, roughly estimating something that varies with the individual, is the high season of language power. It is then that the child is hungry to learn words and words and more words. He experiments with language, makes great efforts to tell his story, to train his speech organs, to collect and arrange a vocabulary. We ought to encourage him in every way possible. But do we?

During these experimental days the child's tongue wags incessantly. His memory for sounds is keen, and he imitates all he hears and adds a little of his own. He will chant nonsense rhymes by the hour, for his love of rhythm and repetition are strong now, urging him on to acquire speech form. He delights in such gems as:

> Mousey tousey dousey wousey
> Lived by himself in a little housey,
> Ate his cheese from a little pouchey,
> Hey—aa—ya, little mousey.

The last line shouted with terrific force, bringing down both feet in a resounding thump.

THE first time one hears this lovely ditty it brings a smile of sympathy and understanding. The fourth and fifth repetitions bring a look of suffering patience, but the hundredth one brings wrath and a shout, "Stop that everlasting ding-dong. You hear? Think I can stand your everlasting ding-donging in my ears from morning to night? Go on away from here."

Two-years sidles around the corner of the porch, and warily sings, "Ding-dong, ping-pong, morning, evening, ding-dong."

Better give him a vacant lot or the back yard or the garage room and let him have it out. He is educating his tongue, and the better he does it now the stronger his language power will be later on. Instead of hurling wrathful words at his head we should begin pouring the treasures of our language before him. It is now we tell him the legends and fairy tales, feed him nonsense rhymes—every child should know Mother Goose and Edward Lear by heart by the time he is six. We should be listening to him and answering intelligently, like the appreciative audience we are supposed to be. Listen and talk back now, so that in the later years the way of communication between parent and child can never be quite closed.

IT IS during this period that little children pick up "bad words." Take the case of Fritzie. He was a very intelligent little fellow who delighted in the garage a few doors from his home. He went there at every opportunity, and he made them if none offered. He imitated whatever he saw or heard, and the men thought it funny to teach him dramatic words. It delighted them to see the child struggle to screw a nut on a bolt, all the while addressing it in terms that would put a black pirate to shame.

One evening shortly after his fifth birthday he startled the family at dinner by letting loose a charge of terrific words at a bit of steak he could not cut. His brothers and sisters gasped in consternation, but Father and Mother seemed not to have heard. Soon he spilled his tumbler of water, and again he swore mightily. Nobody noticed him as he jumped up and shook the water off and gazed at his flooded plate. The silence troubled him, and he took his place again, wiggling uneasily, wondering what was wrong.

After dinner the family held a council, and Mother said, "I have decided that the best thing to do with him is to be silent when he uses that language. We cannot keep him from hearing such words. We cannot keep him a prisoner. He will have to learn to pick his language, and if we here at home use only the best in his hear-

The Hardest Thing Parents Have to Do

"THERE comes a time in the life of a child when parents and teachers must retreat to the background," says Mr. Patri, "and allow the new man or woman to strike out for himself. This is very difficult for parents to accept, especially for mothers. Most mothers want to hold fast to a child long after nature has matured him and shoved him out. He must go. He must loosen the bonds that tie him to home, and he must put the lessons and the experiences of infancy and childhood to the test. He must find himself, and his elders must take their hands off and bid him Godspeed."

ng he will come to know better in time."

The next day she went to the garage, and asked the men to be more careful about the language they taught the little boy who liked them well enough to visit them daily and copy their words and their manners. Couldn't they help a bit? That was enough. Fritzie soon dropped it all, and talked as well as any other little five-year-old, and better. He had varied language experiences, and had learned to select some words and reject some others. I do not recommend the experience but it is not tragic; just a part of the language phase.

Children learn speech that is dramatic very quickly. If we did our foreign-language teaching when children are young we would get far better results. We should get the fundamental words of the new language to the ears of the little folks at this high tide of language growth, instead of waiting until it has ebbed, and then trying to launch it by way of the grammar and the rules. What we accomplish then in pain and effort we could better do in joy and with ease in the lower elementary grades.

IN EACH growth period there are character phases to be emphasized and made part of the child's personality. In this infancy period we teach the most important character phase, the ground timbers, Yes and No. Think what it means to have a child understand those two big words! Not in his first years, of course, will their full power and meaning come to him; but the fundamental elements of them must be registered early, or they will have to be registered later in tears and bitterness.

When you feel compelled to say "No" to a baby be very sure that it is No that you mean, and do not allow it to become "Well, maybe. Possibly. We'll see. Perhaps, if you cry long enough or fuss enough." Think well and then hold fast, for "No" must be No if this child is to know where he is going, and, later on, why.

If the Yes and the No are used wisely after due thought, it does not take long for the child to recognize that fact, and with the recognition comes a deep trust and confidence in the love and rightness of Father and Mother. Instead of being an irritating barrier without rhyme or reason, save the whim of a stronger will, it becomes the barrier of safety and protection erected by the patient love and understanding care of Father and Mother.

The dignity and the sincerity of the Yes and No are strong factors in the effect it has on the character of the child. He in his turn will make his "Yea," yea, and his "Nay," nay, and there will be a reflected wisdom in them, a mellowed tolerance, a sturdy uprightness that form a will and a purpose of steel in the day of trial. Think long and well about the Yes and the No. They go far, far down the years.

Each stage of growth has its own difficulties as well as its high spots. The period of childhood which follows infancy, somewhere along between the seventh and the twelfth years, is a trying time for mothers and children. This is a period of experimenting, a time for testing life and its experiences as the child meets them. Part baby, part savage, part civilized being; now demanding recognition of powers he does not possess, now weeping for the shelter of his mother's arms, now proudly proclaiming his independence, the child struggles toward the new personality so vaguely sensed.

Vague is the term for the child mind of this season. Nothing is clean-cut; nothing is sure. The things he firmly believed yesterday are the silly stories of to day. Santa Claus goes bundling into the rag bag; fairies are denied admittance; the sandman is pooh-poohed. Mother's helping hand is rudely pushed away and then loudly demanded. Grown-ups are lions in the path, and the only comfort found in a changing world is play and the settled, fixed things like rules and tables and lists of dates and capes and gym formations—things that are the same each time you go back to them. Repetitive rhythm lends pleasure to classroom routine, and boisterous, unorganized play fills long, happy hours.

IN THIS time of confusion the child loves facts. He can hold fast to facts. He believes in them. "Look, Allen," says a father. "See these little heaps of earth? The earthworm makes them and, you see, in that way the soil is—"

"Yea. Dad, how many blades of grass are there in this plot, d'ye think?"

"A billion trillion three hundred million eighteen thousand seven hundred and six," says Father, in bitter irony.

"Whoo-ee. That's a lot, isn't it, Dad? How many grass blades d'ye think it takes to cover the whole world? The whole round world all over, I mean?"

Now don't be sarcastic and don't be ironical. He does not understand that sort of spirit. He takes you as a fact. He takes what you tell him as a fact. He wants to number and label and classify, and put his house in order. This is the time for gathering tools—facts. With them childhood is content. It is time to teach rules, and tables, and formulas, and grammar, and lists, and exceptions, and spelling. It is no time for explanations and reasonings. Childhood cuts them short.

"Oh, never mind that stuff," says a boy to his parent who is helping with his lessons. "She never asks us that. You just turn this one upside down, and then you cross out the even ones and then you multiply and you get the right answer. That's all there is to it. If you tell me all that other stuff you get me all mixed up." (*Continued on page 140*)

If You Ask Me:

Discussion exercises the mind; argument exercises only the tongue

THE difference between discussion and argument is the difference between a man who is trying to go somewhere and a man who is trying to stay just where he is.

The man who enters into a discussion is full of a passion for truth and eager to hear it. The man who argues is full of vanity and desires only to hear himself talk.

When two intelligent men begin a discussion, there is a tacit understanding that each will place his cards on the table, reveal what he believes to be the truth, and leave his mind open to conviction.

His desire is to learn the truth, even though he must sacrifice convictions that now are dear to him, and his hope is that the sparks generated by the clash of wits will give light.

Men who argue expect to end where they began. The avowed purpose of each is to defend, with logic or insult, as the contest may require, the convictions he now holds. He will deny truth, and deride it, if it threatens his position.

The fact that he delights in argument proves that his mind is closed against new ideas; the fact that his mind is closed proves that he lacks intelligence; the fact that he lacks intelligence proves that you have nothing to gain through him.

Let him alone. He is a menace. If he is plausible, his sophistry may make impressions that you never will be able to erase. And all experience combines to prove that truth is not to be expected in a mind closed to new ideas.

The lover of argument may be right; but if so, his rightness is accidental. You can't trust the business of developing your mind to one who had rather be wrong than admit being wrong.

PHOTOGRAPH BY BURTON HOLMES, FROM EWING GALLOWAY

For One Whole Year The World Was Mine!

By Eugene P. F. Wright

"Beyond the East the sunrise, beyond the West the sea,
And East and West the wanderlust that will not let me be. . . ."

I COULDN'T stay home any more, so I left New York for the unknown corners of the world. I wanted to sail the Indian Ocean in a typhoon and feel the kick of the wheel in my hands. I wanted to drift among the islands of tropical Asia; I longed to smell the steaming jungles of Borneo, and see a war canoe of head-hunters; I wanted to cross the starlit deserts of Persia. And in a year's time I did them all, and more besides!

By leaving, I acted contrary to the advice of a dozen friends who had been urging me to "stay at home and make your mark—then travel!" . . . "Wait till you get older," said one. "Make some money, and then travel like a gentleman." . . . "You'll get sick and be sent home by the consul," warned another. Advice of this sort came from every corner. It disgusted me. Get narrow-chested and flabby preparing for a soft, comfortable look at Europe? Not I! Grow a big stomach and point my walking stick at the Acropolis? Not on your life! I was going now, and I was heading for the jungle!

Life in Rutherford, New Jersey, where I lived (and still live), had never been of a particularly adventurous nature. The wildest place in town was the public library. The greatest thrill was to catch the morning train to New York. Once there was a burglar in town, but he left before I could shake his hand. Under such conditions, and a previous life of absolute freedom and wandering in the West, what could I do but take a ship and go to India?

It was not a decision of the moment. When I signed articles and stripped for Calcutta and "other ports and places in the world as the Master may direct," I knew exactly what I was going to do, and where I wanted to go. I had planned the adventure for twelve years, and had been holding myself in check to finish college and prepare myself—for what, I did not know, since I wanted only to travel. At last I closed my ears to advice, and quietly shipped off to India.

(At top of page) A steamship surrounded by sampans in the harbor, Rangoon. (In oval) Eugene Wright, who tells in this article of his experiences in the jungles of Borneo, where he lived with the Dyak head-hunters, and of his wanderings through the forests and deserts of Asia in search of adventure

THIS inevitable departure from civilization was preceded by a peculiar state of mind which comes often to me. I was ill at ease with my fellow men; to me, too many of them seemed placid, too pleased, too cow-like. In every crowd I saw the smug and the contented, those who didn't know what life was—they didn't know luxury, because they had never tasted

tter despair and want. They were spending their youth in a dreary routine, when they should be living and feeling the joy of life.

"The pirates have gone from the seas, yes," I thought; "but new lands are being explored, new jungles being penetrated. Cities are for the toilers; but the barbaric jungle lands and still deserts are for the living, for those who are always young!"

I trudged the streets in rebellion with the ball and chain of convention tied to my leg. I avoided people, and they thought me snobbish; I spoke little, and they thought me dull. And all the while I was wondering what lay beyond the setting sun, and planning what I would do when I got there.

IT WAS in such a mood that I crossed over the Hudson River to New York one morning. I hoped that someone would fall overboard; no one fell. I hoped the ferryboat would ram that tug ahead; it didn't. A tramp steamer was going down the river, a British flag at her stern. Other steamers were pulling out, whistles were blowing, flags were snapping in the breeze, and the winds were charged with sea fever. I couldn't stay home any longer. I had to go at once.

Ashore in New York City, I forgot all about my engagement. I walked swiftly along my old rendezvous by the docks to the Sea Service Bureau on Carlisle Street. Crowds of men were standing about in the lobby—Finns, Swedes, Australians, bronzed from their last voyage. On a billboard it was announced that two seamen were wanted for a tramp steamer. "Where's she going?" I asked a fellow. "India," he replied. My heart thumped against my ribs. Suddenly I pushed open the door marked "Private" and walked into the office. I could almost feel the roll and sway of the ship, the kick of the wheel in my hands.

An hour later I was in Brooklyn, and walked up the gangplank of the tramp. She smelled of copra, castor beans, jute, and other aromatic cargoes that come from India. And I belonged to her, a member of her crew—as rotten a crew of seafaring driftwood as ever manned a ship.

The sweepings of the sea made up that crew, the pickings of the water-front riff-raff—two Swedes, a Liverpool "Limey," a Finn, a Canadian, a hobo from Missouri, and a young Irishman from Philadelphia. They had fought and drunk in every port of the world, and spoke of Rio de Janeiro and Shanghai as casually as I would mention Trenton. For the two days and nights we were in port I listened to yarns as weird and savage as ever passed a gunman's lips. The fo'castle reeked of battle and blood. On two occasions, when men came aboard after a night's carousal ashore, there was, as Limey said, "blood fer brekfus!"

I had had little experience at sea, but by working hard, keeping my eyes open and my mouth shut, I picked up a good deal of seafaring knowledge before we left port. Assuming a lazy nonchalance, and being a split second behind the others in taking hold of a new job, I learned the names and manner of doing things without revealing my ignorance. Jerry Joyce, an Australian, and one of the finest men I've met, coached me on ship's bells and the phrases of the wheelhouse, tapping out the bells with a nail until I knew them. He pointed out ropes and deck gear, and told me the ethics of the fo'castle. And at nights I listened to the crew, and started arguments among them so that I could learn more.

THE bo'sun came aboard a half-hour before sailing. The tugs were alongside, and the blue peter was at the masthead. The hatches were battened down, ready for sea. But there was no excitement. The crew lolled half-asleep on the after bitts, smoking and repenting past sins; three longshoremen leaned against the dock sheds, waiting to cast off the lines.

I stood against the railing, tense with excitement. We were going to India! Why didn't those sleepy animals get up and shout! The whistle blew, and the pilot strolled leisurely up the gangplank. The bo'sun and some day men were taking up the gangplank with a "heave-ho!" Was the crew dead? I walked swiftly up amidships to work off steam; I wanted to whoop, to smash my fist against the steel bulkheads from sheer excitement. And at that moment the bo'sun called, "Wright! You and Freddie on the twelve-to-four watch. Make it lively now!"

My watch-mate, a young Swede, with sloping shoulders and a fat face wrinkled like an old peasant woman's, came slouching toward me. "You want first wheel?" he grunted.

"Sure, I'll take it," I replied, and climbed up to the wheelhouse. I was to take the tramp out of New York harbor on her voyage to India!

The pilot pulled the whistle. "Bring back a monkey!" shouted someone on the dock. The Captain laughed. "It'll only die," he replied, and waved his hand. The moorings were cast off, and I gripped the spokes of the wheel tightly.

My first few minutes in the wheelhouse I shall never forget. I hung carelessly against the wheel, as I thought a seaman would do,

and obeyed commands more by luck than reason.

"Steady!" called the pilot. I kept the wheel still. The ship vibrated, whistled again, and with the water singing in foaming eddies about her sides, drew away from the dock, and backed into the East River.

"A turn to starboard!" called the pilot from the bridge.

"Turn to starboard!" I repeated softly, and we swung back to the pulsations of the engine. The wide panorama of the world's shipping spread before me, the flags of all nations were in sight, and here was I, guiding a ship—a part torn from the earth it seemed—across the horizon.

I hesitated on the next command; I made the reverse of the next. The Captain, standing by my side, said, "Say, did you ever steer before? Mr. England, send up another man." The relief came up, and I left the wheelhouse humbled and humiliated. As I went down the ladder, I heard the mate say, "Probably was in the Navy. They do everything backward there."

But it made no difference with the crew. When my relief came down at two o'clock, he said, "Wonder you didn't slam that rotten pilot. He ain't no pilot at all!" They thought I had been sent down for talking back.

That night at twelve I came to the wheel again for two hours. We were far out at sea, and the course was set at 180. There was no pilot to give orders I did not understand, and I held the course, rarely being more than three degrees off.

FOR six days I was seasick. I ate practically nothing. One night I almost dropped unconscious at the wheel. In my weakened condition the lighted dial of the compass affected my eyesight and numbed my brain. I awoke from a daze to find that I was twenty-five degrees off my course. The second mate, fortunately, did not look in and notice it.

Another night, in the fo'castle there were arguments on everything from tinned beef to religion. The seamen sat on the edge of their bunks, and the firemen and oilers, smeared with grease, sat on empty boxes on the fo'castle floor. One of the mess boys, with three gold teeth and an officer's cap on the back of his head, shot craps for cigarettes with the Brooklyn Kid.

Suddenly, Carlos scratched his cropped head and demanded to know who all the streets in New York were named after. He wondered if he wrote a letter to the President would he name a street after him. A lanky Bostonian who had gone to sea to run away from his wife explained religious doctrines to a New Zealander. Raising their voices above all others, the Canadian, the Cuban and a Liverpool cockney said what each would do if the ship suddenly sank, and wondered if they would turn into angels or be tormented souls roasting in hell.

Everybody talked at once, and waved their arms in the heavy tobacco-smoke atmosphere. As they argued more violently they came nose to nose, and pounded the fo'castle floor with their fists. The Swedes and the Finn, who could not follow the arguments, remained silent for some time. Then they bawled out coarse jokes, roared with laughter at some sally, and swaggered out to drain the coffee from the urn in the mess-room.

At Port Said, notwithstanding the terrific heat of the Red Sea, the crew drank smuggled whisky and fought like wildcats. Leach, a scar-mouthed Irishman with black brows and a quick temper, knocked the neck off his bottle and poured a splash of whisky on the floor. Olesen tossed in a match, and the fo'castle lighted up in flames. "Good likker!" cried Leach, and took a long, gargling drink. The bottles were passed around; the rough play commenced.

The drink loosened the tongues and tempers of the Northlanders, and, half-naked and sweating, they reeled to the sway of the ship, waiting for a word to ignite their Berserker rages. Alabama and Limey, the two day men, wrestled in one of the bunks, and then scrambled for the companionway. They took down the fire axes, and after a drunken, laughing challenge to the officers forward, began to wreck the fo'castle. A bottle was hurled through the smoke-filled room,

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

and struck the wall behind me. I heaved it back. Olesen, half in play, slung a sea boot at my face; I dodged it, knocked him down, and went on deck.

The next day, of course, all was forgotten. My watch-mate, the Swede, went delirious from the heat. It was 98° Fahrenheit in the shade, and few of the men could carry on with their work.

When we struck the Indian Ocean, a cool breeze sprang up and everyone felt better toward evening. Limey was strumming a popular song on an ancient banjo; Ole Olesen was lying in his bunk, softly singing an old Swedish folk-song. A harmonica and a jew's-harp started up. Other voices joined in, and soon the brutality of two days before was being contrasted with a strangely beautiful evening of sacred sentiments. Old notebooks were gotten out, in which were written the words of cherished songs that had taken the sailors' fancy. All together, and in various tones and melodies they sang of Mother, of the little gray home in the West, and of the dying soldier on the battlefield who kisses a lock of his sweetheart's hair.

They sang with their heads slightly bent, and with a deep reverence. The jew's-harp twanged dully, and often the banjo missed the notes, yet more than once I found myself singing with a choke in my voice. A sophisticated audience would have laughed these songs into a burlesque; but these sailors sang them from their hearts, for they recalled their only tender memories, the fine moments of their childhood.

IT WAS only the rugged, inhospitable coast line of Africa, the spouting whales, and the profound mystery of the sea at night that kept the spark of adventure burning within me. The food aboard was bad. We ate fish that had been kept for twenty-eight days, and when the thermometer ran up to 100° we were fed pork and fried liver. There was continual talk of mutiny, and bad feeling ran high between the various sections of the ship. At Karáchi, our first port in India, there was a brawl ashore, and the two cooks went to the hospital with broken noses and teeth. We sailed along the Malabar Coast for Bombay with Goanese cooks, and very good cooks they were.

We were a week in Bombay. When I was not chipping rust and painting over the ship's side, I was wandering through the Thieves' Bazar or watching the Rain Processions of Hindus on Calchapur Road. We touched at Ceylon of the tall coconut palms and luscious fruits, and there I evaded quarantine by slipping over the side and swimming ashore to see the town. At Madras we laid up for three days, and six days later, when we had swung up the Hooghly River in mighty, full-shouldered curves, and dropped our anchor at Calcutta, I knew my voyage on the "Tramp" was ended: I had been injured by a hawser at Port Said, and went immediately to the hospital.

Nineteen days later, when I came out of the hospital, the ship was gone and I was a free man. I took up my quarters in the Seamen's Mission and began to absorb the dust, the heat, and the rich color of India.

INDIA! I stayed in the Province of Bengal for a month and a half. I learned to jabber away in mongrel Hindustani, and spent weeks roaming through the bazars and the outskirts of the city. With a Moslem fisherman I explored the inlets and lagoons of the Ganges, and sailed among the Sunderbunds Islands, eating the native fish curry and rice, and drinking coconut milk.

The monsoon rains had not yet arrived, and the heat was terrific. One afternoon I felt dizzy and returned to my room. Two hours more, and I was burning with fever, and the next afternoon I was taken to the Howrah Hospital. I came out twelve days later, weakened and thin, and with a great pity for the helpless natives and the horribly deformed and crippled who begged alms in the bazars.

But I had remained in one place too long. I had walked the same streets twice, and seen the same faces. I decided to move on to Burma and the Malay Peninsula, to Borneo and the East Indian Islands. I sold my oilskins, dungarees, and sea boots to a sailor, collected the remainder of my sea wages from the consul, and after some difficulties with the Bengali passport authorities took a deck passage to Singapore.

We stopped at Rangoon for three days, and touched at Penang. We passed hundreds of silver-edged islands, and finally eased into Singapore. I loafed about the Chinese quarter for two weeks, eating golden pork and rice curry with red chopsticks. Every day I strolled about the quays, picking up the Malay language and looking for a native sampan, chatting (*Continued on page 66*)

The Young Magi

By Faith Ellen Smith

A story of two children who set out to follow the Star in the East

THE two children were in their beds: Buster, whose real name was Irving, in his white iron bed in the room that had a border of blue bunnies around its walls, and Budge, whose real name was Hester, in her white iron bed in the room that had a border of Mother Goose characters done in pink and gray. They were supposed to be asleep, but they were not. The door was open between them, and they were sitting up in their little beds, talking.

It would have been impossible for them to sit up and talk long after six o'clock bedtime if Nannie had not been sent away; although, of course, if Nannie had not done that for which she had been sent away they might have had nothing to talk about.

But Nannie had gone, with her trunk and her little brown satchel and her big green-black umbrella that could shelter her and the children, all three. And Nora, who had come in her place, not knowing their wiles, had thought, when they lay very still, that they were asleep, and had tiptoed down-stairs to the kitchen.

Mother, of course, was at a party; she had come in to kiss them good night, all done up in her big black coat with the gold dragons worked on the back of it; and Father never came home any more. So they were quite alone and could talk right out loud as much as they wanted to.

Buster, who remembered very well what Nannie had said, did most of the talking.

"He's just a weenty, teenty baby," said Buster.

"Weenty-teentier than me?" asked Budge.

She sat scrooched against her pink wall so that she could see Buster sitting

crooched against his blue wall. It was quite dark in her room, though a ray from one of the street lamps shone on Buster, and Budge, although she tried to be brave, was somewhat frightened.

"Oh, *lots!*" said Buster in a lordly way. "You're a great big girl, you're 'most six. And He's—He's only a wee little Baby. 'Bout so big!" Buster measured with his hands.

"And He hasn't got any bed."

Buster took up the story.

"He hasn't got any bed. His mama had to put Him in a manger."

"What's a manger?" asked Budge.

"You know. I've told you 'most a hundred times. It's a thing the horses eat their dinners out of. It's full of hay—like we saw the zebra eat in the Zoo."

"I know, now," said Budge. "And—what else hasn't He got, Buster?"

"He hasn't got any nice warm room, or any train of cars, or any rocking horse—"

"Or any wabbits?"

"*Rabbits*, you baby! No. . . . He hasn't got *any*thing. Poor dear little Baby, He hasn't got anything!"

Suddenly Budge began to cry. "I want to give the little Baby my woolly bear, Buster. I want to give Him my ring-with-a-pearl-in-it."

"You can't, silly."

"Why can't I?"

"I—I don't 'zactly know."

"Doesn't He live in New York, like us?"

"I don't—think . . ." Buster was silent so long that Budge spoke sharply:

"I do so, Buster. Why can't I?"

"Well," said Buster thoughtfully, "first, Nannie said He lived long, long ago—and then she said He lived now. And I asked her if He didn't grow up, and she said He did; but He came again every Christmas time, and we could ask Him to let our father come home, and maybe He would, because He could do anything at all He wanted to. It's very strange, Budge. Prob'ly that's why she oughtn't to've told us about Him."

Budge was the more energetic of the pair. Also, she was persistent.

"But if the little Baby is here in New York, we could find Him, Buster. They found Him before, didn't they?"

"There was a Star," said Buster. He scrooched up his eyes, trying to remember. "They followed it, and it was right spang over where He was."

SUDDENLY there was a rustling in the next room and a pad-padding of bare feet across the floor. Budge came to the door, with the woolly bear hugged tight against the breast of her little nightgown.

"Buster, we could go and look for Him, and when we found Him, we could ask Him to let our father come home again!"

"Oh—we *couldn't!*"

Budge began again to cry. "We could, too," she sobbed. And then, changing her tactics, she began to dance up and down excitedly. "We could so, Buster! You could button my clothes and I could button yours. We could sneak out, just as *quiet!* Oh, Buster, let's!"

"Mother wouldn't like it," said Buster.

"You daren't," said Budge, dancing and pointing her finger at him. "Fraidy cat! You daren't!"

"I do too dare!"

"Then *let's!*" said Budge beguilingly. "C'mon, Buster. Let's!"

There was no one in the front hall when the children went down-stairs. They could hear the servants talking in the kitchen—which was fortunate, for the servants were making so much noise that they could not hear the children, creeping as quietly as mice down the wide oak staircase.

The children, pausing in the hall to struggle with the big front door, even heard themselves discussed. "Wud you believe it," they heard Kathleen, the cook, exclaim. "All the poor sowl did was tell 'em the story of our Blessed Lord in the manger; an' the Missis took on like she'd fed 'em poison. 'No child of mine,' she says—I heard 'er with me own ears—'is goin' to be brought up on superstishus tales of any kind—least of all, kitchen versions of 'em!' Oh, she's a mean tongue in 'er head, that one, since her trouble, God forgive 'er!"

Buster winked at Budge as the door swung open. As it closed behind the two, Budge gave a little shiver, part excitement, part happiness, part fear. "There's the Star," she whispered. And there, sure enough, was a very large, very bright star, right, it seemed, over the end of their very own street!

HAND in hand, the children went down the front steps, past the two little stone lions that Budge secretly feared, because they had their mouths open and looked so fierce, and turned to the left. There was no one but themselves abroad in the block, for many of the fine old houses were dark behind their closed shutters, their owners being away for the winter, and in the others people were at dinner. Quite unnoticed, the children walked to the corner.

At the corner was Fifth Avenue, and just as they had passed unquestioned before because there was no one about, so they passed unquestioned now because there were so many people in the street.

"Sweet children!" thought a lady with her arms full of bulging packages. "I wonder if they belong to the actory-looking person in spats or the old woman with the cane." She smiled at Budge, who carried the woolly bear pressed tightly against the bosom of her little blue, fur-trimmed coat, and at Buster, who was clinging so tightly to his sister's arm with one hand, while the other grasped a small toy engine.

The children were standing behind the actory-looking person with spats and the old woman with the cane, waiting to cross the Avenue. The lady passed on, with the tender smile still quirking up the corners of her lips. She thought that whichever of the two people the children belonged to should have paid more attention to them, not let them lag along behind like that, in danger of getting lost in the crowd. But, she reflected rather bitterly, people who had children seemed to take them as a matter of course, whereas people like herself, who had none, would have given almost everything they possessed for the right to look after them. . . .

While the lady was thinking these things, the signal lights all along the Avenue changed from green to red, and the four who were waiting to cross, did so.

On the opposite curb, the old woman with the cane turned left and the actory person right, never so much as glancing behind them.

It was a pleasant night, clear and comfortably cold. The trees in the Park, which was directly before the children, stood up sharply black against a greenish-blue sky. The Star, they saw now, was a little to their left. So they walked along in the shadow of the Park wall, until they came to Fifty-ninth Street, where a policeman was holding up the east and west traffic, and, crossing behind the old woman with the cane, they paused to look up at the sky.

Their Star seemed to be a little to their right now, so they turned west on Fifty-ninth Street. When they came to Sixth Avenue, they stopped to look to right and left, as Nannie always did, before they crossed the street. A girl with a queer-looking hat and very red lips stepped up to them and said:

"Are you lost, little boy?" a shade too sweetly.

"Oh, no," said Buster confidently—for, after all, was not the Star leading them?

The girl thought: "Looks queer to me—two kids dolled up like that, pokin' around alone. Might be a reward in this; but, lord! It'd be my luck to be pinched with 'em before I could turn 'em over to a cop!" And while she was thinking these things, with her very red lips twisted to one side in a smile that was not particularly pleasant, Buster saw that for a second the street was clear of traffic, and tugged at Budge's arm, and the children went across.

Seventh Avenue was terrible, and Columbus Circle even worse!

"I'm—I'm afraid," said Budge, with her lips trembling and her blue eyes brimming with tears.

Buster, too, was afraid; but he wouldn't own it. "Fraidy cat!" he teased her. "You just hang onto *me*, Budge. I'll take care of you." And, all mixed up with the crowds of people who were going home with their arms full of packages or going down-town to the theatre, or going heaven knew where, with a wild desire to get there as quickly as possible, the children crossed.

The streets were darker now. Even the people were darker. Many of them, in fact, were quite black. They looked at the two well-dressed white children strangely. A motherly, fat negress, with a little pickaninny about Budge's size clinging to her skirts, said, "Whar you gwine, honeys?" But Budge and Buster went past as fast as they could—for how could they explain where they were going when they didn't rightly know themselves? And the negress, who had a sensitive soul for all her great size, muttered, "Stuck-up white trash!" and let them go.

And while she was saying this, the children crossed Ninth Avenue, under the ugly, dark elevated tracks, and went on.

THE sidewalk here was rough and broken, and the dirty little shops along the street were not at all interesting, and the Star seemed as far away as ever. Budge began to whimper. "I'm tired, Buster, I fink I'd better go home."

Buster too was tired. He stopped beside Budge in front of a shop that had scraggly branches of holly in its windows, and looked around. But a queer thing had happened. The Star was where it had been when they set out; but everything else seemed changed. He didn't know where home was! For a minute he was terribly frightened; but he wouldn't let Budge know it.

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

"Don't you want to see the little Baby?" he asked her, and Budge, snuggling the woolly bear more firmly in her weary little arm, said she did.

A group of other children were coming toward them from the doorway of one of the tall buildings. They were rough children. Their faces were dirty and their clothes were strange. They danced around Budge and Buster, shrieking. One rude little boy took hold of one of the woolly bear's paws. Budge got as near as she could to Buster, and Buster said, "You leave my sister be!" very crossly. But the other children only shrieked the louder.

THEN the door of the little shop opened, and a big policeman came out. "Hey, you kids!" he shouted, and the strange children disappeared like magic, and only Budge and Buster and the policeman were left.

The policeman scowled at Budge and Buster.

"Youse kids better get along home," he said, "or somebody'll take them toys off you."

He thought that he was glad his own children were safe in his flat in the Bronx, not playing about in the street as these tenement children did, and wondered a little why anyone who could afford to dress children as these were dressed should be living here in the slums.

But his feet ached, for he had been on traffic duty since morning, and his mind was so filled with thoughts of the Christmas toys he was carrying in a package to that same home in the Bronx, that he didn't look very closely at the two small persons before him; and by the time he had decided that it would be well to ask them where they lived, Budge and Buster were not there to be asked.

The policeman watched them as far as Tenth Avenue, then he started off in the opposite direction, toward the subway. And the two children went on.

The street was almost deserted here, for the buildings along it were hospitals and warehouses.

"I am tired," said Budge pitifully. And she added, "Aren't we almost there, Buster?" in a trembly little voice, quite forgetting that Buster knew no more where *there* was than she did.

Buster swallowed hard and gave her arm a reassuring squeeze. And then Budge made a terrible discovery. "Buster!" she cried. "The Star's—gone!"

The Star *had* gone! So had other stars. The sky, which had been so clear, was clouding over, and the air was growing warmer. There might be snow for Christmas Day, after all!

"It's gone!" wailed Budge. "Oh, Buster—what'll we do—now?"

Buster rose to the occasion manfully.

"Then He must be here, Budge. He must be here, somewhere!" So the children turned the corner and began to look for Him.

It was a queer section for the Baby to be in, for the shops were even smaller and dingier than those they had seen on Fifty-ninth Street, and a railroad track ran right down the middle of the road. Although the children did not know it, they had gone almost as far west as they could go in New York City, for the river was just across the street, behind some ugly, dark buildings.

Boats were going to and fro upon its black surface, and all along this street were strange characters—longshoremen, sailors, men who were there because, in ways legitimate or otherwise, they made a living along the docks and wharfs. These men and their women, celebrating Christmas Eve according to their various pleasures, saw the children, and in many a mind strange thoughts stirred.

Suddenly, as Budge and Buster stumbled along that drab street, two shadows moved out of the darker shadows of a doorway and followed them. A little later, when they had come to part of the walk before an unlighted store, the two shadows came abreast of them, one beside Buster and the other beside Budge.

"Hello, buddy," said Buster's shadow thickly.

Buster looked up, and saw, in the dim light, a yellowish face with a cigarette pendent from thin, cruel lips, and shrank away from the hand laid familiarly on his shoulder. For children have an instinctive knowledge in these matters, and Buster knew that his shadow was not to be trusted.

Then Budge's shadow spoke. "Well, sister," it said, "where you goin' with that big bear?"

THE children were too frightened to cry out. They stood stock-still for a moment, and the two shadows nodded to each other above their heads.

"Say," said Buster's shadow, "youse kids come wid us, an' we'll give you a bear twice as big as that an' some candy an' ice cream."

Now Budge looked up. She saw, too, a thin, yellowish face, with a pendent cigarette between its lips. But the lips of Budge's shadow were not so cruel as they were weak, and the face of Budge's shadow was not so filled with evil as with the possibility of evil. And either because Budge, being younger than Buster, had less intuitive wisdom, or because, being a girl, she had more, she did not shrink away from her shadow.

Instead, shifting the woolly bear to the arm Buster was holding, she reached up for her shadow's hand. And when the shadow said, "Yeah, youse kids come home wid us," she asked, in her sweet, wavery little voice, "Is He there?"

"He?" said the shadow quickly. "Who?"

And Budge explained, "Our Blessed Lord in the manger."

Buster's shadow spoke two words under his breath, but Buster heard them. "Yes," he said. "That's what Nannie called Him." And because they felt reassured by the discovery that the shadows knew the Baby's name, the children, talking both at once and very rapidly, explained that they were looking for Him.

When they had finished, Buster's shadow said: "Sure; youse come along wid us an' you'll find Him all right." But Budge's shadow didn't say anything for a minute, and when it did its voice was so

They had parted with bitter words; but neither had time for bitter words to-night

Buster saw that for a second the street was clear of traffic, and tugged at Budge's arm, and the children went across. Their star was a little to the right now

queer that Budge and Buster were frightened all over again.

"That's all off, Red, see?" said Budge's shadow.

"Jees," said Buster's shadow. "What you mean off? Lost yer noive?"

"What I said," responded Budge's shadow; and the hand that had been holding Budge's hand shot suddenly into a pocket. "It's too risky, anyhow."

"Aw, Kid!" the other shadow whined. "We wouldn't need to hoit 'em—an' think of the jack!"

But Budge's shadow said, "Nuttin' doin', Red. You got me!" And its hand remained in its pocket.

So the shadow called Red moved away, mumbling things under its breath, and the shadow called Kid also moved away before the children could question it further. But the shadow called Kid followed the two children at a distance, with its hand in its pocket, and now and then, when it saw other shadows approaching them, it slipped out and showed itself, and the other shadows slunk away. And while these things were happening, the children, both frankly crying now, wandered down the street until they came to a brighter block, where the shadow called Kid did not think it wise to follow them.

So Kid ceased to play a part in their adventures; but perhaps, since the part he had already played had been considerable, it may not be amiss to state that, still a shadow among shadows, he stood for some time watching them, weighing his anxiety about them against his anxiety about himself, in case (*Continued on page 112*)

Who Is Your Hero?

Whoever he is, says Brooks Fletcher, he has had a whole lot to do with the shaping of your life—The story of how Fletcher's own heroes changed him from a would-be jockey to a powerful orator who is said to have addressed more people from the platform than any other living American

By Albert Edward Wiggam

I HAVE been reading a little book that is inspiring vast numbers of young men and young women. "Public Speaking To-day" is its title, and it is used in hundreds of schools and colleges. In the development of their theme, the authors—Dr. Francis C. Lockwood, and C. D. Thorpe—make a sweeping survey of all the famous modern public speakers in America and Europe, and select the five greatest orators of this generation. In that list appears the name of Brooks Fletcher.

And there seems to be plenty of evidence to justify the inclusion of Brooks Fletcher's name in it. For Fletcher is not only one of the most highly paid public speakers in the world, but he is supposed to have addressed more people from the platform than any other living American.

Although a congressman from Ohio, Fletcher is not best known as a political figure. A newspaper editor and publisher of note, he will not be remembered longest for his contributions to journalism. . . . It is by his talks to thousands of audiences on problems of self-expression—on making their lives count to the utmost—that he has made his most indelible impression on American life. And to-day, in addition to all the other demands on his time, he carries on a most amazing correspondence, particularly with young men, to whom he gives helpful counsel on the choice of careers or the meeting of other difficult problems.

Fletcher has a passion for "selling people to themselves," as he likes to call it.

He *ought* to be an authority on self-expression, for he had a terrible time in achieving it in his own case. Back of his present honors lies a most amazing story.

A child weakling given up to die, he later became a prize wrestler, a crack rifle shot, and holder of the hundred-yard-dash record for his state. Once a farm boy, a waiter in a restaurant, a truck driver, a boiler maker, a "bucker-up" for steel riveters, and a roustabout in a hardware store, he was later destined to move hundreds of thousands of working men by his eloquence, and personally to help many of them into richer lives. At one time an underpaid solicitor for newspaper subscriptions, he afterward became an editor and publisher.

Moreover, Fletcher's first efforts at public speaking were classics of failure. In the first speaking contest he ever entered there were eleven contestants—and he got *eleventh* place.

But always my mind drifts back to Fletcher's fruitful contacts with human lives. I have before me an old faded letter from a boy named Frank, out in western Nebraska. I remember putting it, years ago, into a little box in this old second-hand desk, where I have sat and written and pondered for a generation, and where nearly all those years Elizabeth, my wife, has sat and patiently read to me aloud, because a few headlines in the newspaper and a few pages of manuscript is all I can ever see to read in one day. I have found another letter to Frank's, of later date, from his sister, telling me that Frank was killed in the Argonne.

But Frank's letter is full of boyish enthusiasm, telling me that he had followed Brooks Fletcher all over western Nebraska to hear him speak, and that he had learned typewriting and shorthand, as Fletcher had advised him, and that he was reading day and night a course of books Fletcher had outlined, and that he was some day going to be a speaker, and scholar, and writer, as Fletcher had assured him he could be. Frank had one of Fletcher's letters in his pocket when he "went west" to the Argonne. And many another boy had one of them too. They helped them to keep steady when the zero hour came.

FLETCHER doesn't hold a chair in any university; but he is his own university. I doubt if any educator we have is exercising a more direct powerful influence on America's youth than he is.

While he is one of the highest paid speakers in the world, he will never get rich, for he not infrequently gives his services, where returns in money are not possible.

"I was born a mile from the poor farm," he said to me once, "and since I have become an editor and gone into politics, I am a good deal closer to the poor farm now than I was then." But he has made thousands of others rich with fresh resolutions, new hope, more enduring fortitude. This is proved by another story that I like to tell:

Fletcher was speaking at a big banquet of Chicago business men. As he sat down, another speaker rose, attired in elegant evening dress, and delivered a telling speech, keen, logical, witty, polished, and forceful in delivery, and concluded by saying: "Gentlemen, a few years ago I was a blacksmith. But one night I heard Brooks Fletcher deliver an address on "Who is Your (*Continued on page 127*)

Inspiration Isn't Much Good Unless You Do Something About It

"THE greatest salvation for any young man is for him to find the right hero, the hero that inspires him along the lines of character and talent which he believes he possesses in the highest degree," Brooks Fletcher told Mr. Wiggam. "Every man who is not an imbecile has plenty of powers of mind for all practical purposes. A man can do well in any one of many occupations, if he will just get the right hero, the right ideals in his mind, and never leave them nor let them leave him.

"The biggest thing in any man is his heroes, even if he cannot offhand recall who they are. Consciously or unconsciously, he has followed them all these years, and he will follow them, and they will follow him, to his grave; and no man can ever rise above the level of his heroes.

"The processes through which human beings make the most of themselves are: First, *inspiration;* second, *affirmation;* third, *preparation.* It is from your heroes that you get the first—but out of yourself must spring the other two. *Affirmation* comes when you say "I will!" and *preparation* when you set about making good the promise to yourself. Inspiration by itself will not get you anywhere; but you can't get anywhere without it."

Brooks Fletcher

WHEN Brooks Fletcher was a boy he spent so much time getting into scrapes and getting out of them that his somber-minded neighbors predicted he would some day get into an escapade that had no exit. However, he fooled them, for about the time their pessimism reached its zenith, Fletcher got hold of a real ambition, and set out to become a famous orator. He has reached that goal, as his audiences will tell you. Mr. Fletcher was born in Mechanicsville, Ohio, in 1879. He has been a newspaper man in Alliance, Canton, and Marion (Ohio), and has appeared all over America on Lyceum and Chautauqua platforms. He is a member of Congress from the Eighth Ohio District.

Jessie Bonstelle

AS ACTRESS, producer and manager, Jessie Bonstelle, manager of the Bonstelle Playhouse, in Detroit, is well known in theatrical circles; but her ability to find and develop latent talent is her most remarkable characteristic. The list of stars who owe their start to "Bonnie" includes many of the best known younger names in the theatre. She was a successful manager before she was nineteen. For seventeen years she ran summer companies, in Rochester, Buffalo, and Detroit; and for five years she ran the Municipal Theatre in Northampton, Massachusetts. Among her first real achievements was the dramatization of "Little Women," Louisa M. Alcott's famous novel. Miss Bonstelle was brought up on a farm near Rochester, New York.

"God Made The Heavens But 'Bonnie' Makes The Stars"

his was the tribute that a famous actress wired to Jessie Bonstelle when the beautiful Bonstelle Playhouse was opened in Detroit—The story of a theatrical genius who has discovered and helped put over many stars, and who herself is an actress, producer, and manager

By Helen Christine Bennett

TAKE her. But you don't have to keep her because she's my daughter. If she's no good, fire her. She doesn't know anything about acting; but give a chance."

The young girl who was pushed forward not raise her eyes. Slight, yet with soft roundness of youth, her pallor nanced by her dark hair, she stood, mbling with nervousness, an awkward d reluctant recruit to the theatre. She rned rather forlornly to her big, bluff, arty father; but he shook his head and nt out.

"Come along, dear." The girl looked rfully at the small golden-haired figure at stood beside her.

"I'm scared, Bonnie," she said.

And scared she was. At the first rearsal she wore a little mink scarf about r neck. When she finished reading her es, she chewed the end of the scarf. It ust have given her some relief, for she ntinued to wear the scarf, and before stume rehearsals were called the entire d of it was mangled to shreds. When e was corrected or a suggestion was fered, she stumbled and seemed unable follow; but at the next rehearsal every oint was covered, every suggestion perfected. Watching her, Jessie Bonstelle ook a thoughtful head.

"That girl," she declared, "will go far."

All went well until the father, who had financial interest in the play, decided to ttend one rehearsal. Hoping to escape otice, he slipped into a rear seat. The irl saw him, stiffened and became ooden. All her confidence and natural race fled. Yet when the act was over she an to him, pleading:

"Was I all right?"

William A. Brady turned scornful eyes pon his daughter Alice.

"All right!" he echoed. "You were otten. You can't act. You—" There ollowed a tirade that shook the slight orm before him. Then suddenly there ame down the aisle of the theatre a eminine figure drawn up to its entire five eet two inches of dignity.

"Mr. Brady,"—the clear voice was so cy that the man shivered—"you are alking to your daughter as you would not are to talk to any other member of this ompany. You cannot do that. If you annot control yourself, I must ask you to eave the theatre."

"All right, ma'am," he said meekly, and went out chuckling with pleasure. So she was worth fighting for!

"Oh, Bonnie!" wailed the girl.

"Don't you believe him, Alice," said the other. "You can do it; you are doing it. You'll show him at the opening. Just work."

Opening night at Wilkes-Barre, Pennsylvania. Again the big man slipped into a rear seat and watched. But this time, he watched with little chuckles of contentment, and when after the final curtain the girl went to find him, he met her half way.

"Oh, Pop—" She got no further.

"You were great, Alice," he assured her, "great, and the play's a winner!" With one arm about the girl he stretched out a hand to the woman who had directed her.

"We owe a lot to Bonnie," he said.

So was a new star born, Alice Brady, whose name was soon to shine in lights along Broadway!

"WE OWE a lot to Bonnie," finds an echo here and there all over the theatrical world. Young men and women who have achieved stardom, and those on the next rungs of the ladder looking upward, frankly admit their debt to Jessie Bonstelle. An actress, producer, manager, Jessie Bonstelle is a recognized leader in theatrical circles; but her ability to seek out and develop dormant talent overtops all else, and is marked as genius.

"Little Women," the play which started Alice Brady on her way to stardom, has sent many another girl and boy along the same route. It was Jessie Bonstelle who saw the possibilities of dramatization in that most popular book of Louisa Alcott's, and the play was written at her suggestion and with her coöperation. Produced by her for the first time sixteen years ago, it still flourishes as a hardy perennial. For a year it ran in New York, and then four companies took it upon the road, and Miss Bonstelle took a company to London; and as girl after girl stepped from portraying Meg, Jo, Beth, and Amy to stellar rôles, new girls blossomed forth as their successors. Katherine Cornell, now in the first rank of the stars, was the "Jo" of the London production, and went from that part direct to her great success in "A Bill of Divorcement."

Gladys Hulette, Beverly West, and Marian Coakley all mounted higher upon the ladder to fame as a direct result of their portrayal of the March sisters. And although male parts in the Louisa Alcott story are few, Howard Estabrook, now an able motion picture director, and Donald Gallaher, who made such a marked success in "So This is London," and later produced "The Gorilla," were two of the "Lauries." John Cromwell, producer and actor, was the "John Brook" of the New York production.

AND this is the roster of but one play. Recently I was a guest in the greenroom of the beautiful theatre that bears upon its doorway the inscription "Bonstelle Playhouse." Named for Jessie Bonstelle, and managed by her since its opening in 1925, this theatre has come to be the boast of the city of Detroit as one of its fine examples of progress in the arts. When I had listened to a smart comedy, had met the cast, and had gone over the theatre itself from the auditorium to the sanctum of the stage director on the seventh floor, I returned to the greenroom to examine the guest book, kept for distinguished visitors. After many names I found cryptic letters, B. A., or F. B.

"B. A. means Bachelor of Arts," I said musingly; "but why in a guest book? And what is 'F. B.'?"

Jessie Bonstelle leaned over my shoulder.

"Oh," she said, laughing, "that 'B. A.' is one of our own brand. It stands for 'Bonstelle Alumnæ.' And the 'F. B.' means 'Former Bonsteller'!"

"But look, there are so many of them!" I protested. And I read a few of the names: "Ben Lyons, Ann Harding, James Rennie, Frank Morgan, Edith Meiser . . . Were all these with you?"

"Frank Morgan was with me for three years, and then went to 'The Firebrand'," she answered. "I had a hard time to induce Ben Lyons to come to me; I could offer him so little. But he came, finally; and how I did hate to lose that handsome and able young man to the pictures. Ann Harding played first as fifth woman, and worked in two years up to playing leads for me. James Rennie was with me two years at the Municipal Theatre, Northampton, Massachusetts. He wanted so much to play Hamlet that finally we put it on, and the girls from Smith College almost bought out the house. But there are many more. Dudley And The Cattycornered Dog

A story

By HOWARD BRUBAKER

Illustrated by R. M. Brinkerhoff

"Your name is Dudley Hammerton?" The merchant was clearly amazed

WHEN the ten-thirty-two stopped at Branford on that warm September morning, the first person to get off was a tall, brown, muscular young man with a paper suit case, which he successfully defended from the attacks of two hotel busmen. He started up the street toward the business section with the unhurried gait of one who had no pressing engagements, and whose feet hurt. He wore a decent new suit which was a little too long in the trousers and too short in the sleeves, and which showed wrinkles from the night in the day coach. His corn-colored hair was closely cut, so that his ears stood forth with startling distinctness beneath his yellowing straw hat. He wore shiny black shoes, which were presently inspected by a little white dog whose time was all his own.

The young fellow patted this creature on the head and said frankly: "You don't seem to be any special kind of dog." He then resumed his journey, but no longer alone, for the dog of hazy ancestry trotted along. The youth observed with interest that his new friend did not go the way he was pointed. "I don't know as I ever saw such a cattycornered dog," he thought. He next observed that the creature favored its left hind foot slightly, so he sat down on the curb and summoned the animal.

The youth had a fellow feeling for this canine, because he, too, had foot troubles. His mother had insisted that he wear new shoes upon going out into the great, stylish world. Her word was his law, but he was tempted to wish that she had not passed this law. As he fondled the dog's sore foot he made an amazing discovery. The dog looked like a man he knew back in Carter's Corners, a sewing machine agent named Alexander Blue. It was really an astonishing resemblance and gave the boy pangs of homesickness. "Well, good-by, Alexander," he said, rising reluctantly to his aching feet.

BUT a block farther up the street he still had a dog, which now sniffed at a man who stood in the doorway of a little store bearing the sign, "Steckmeyer, Society Clothier."

"Here, Alexander!" cried the young man in sharp reproof.

Upon this slight acquaintance, the merchant asked whether he could show the stranger something in elegant suitings. He had some special extra garments in to-day fresh from Fifth Avenue.

"No, thank you. I don't need any clothes."

The haberdasher looked the farm boy over critically. One felt that he did not share this view.

"How about an elegant Kampus-Kut suit, like the college boys wear?" he insisted.

"Not now, mister," negatived the young man. He tried to soften the blow. "I have come to Branford to look for a job. Maybe you know of some job, Mr.——" he glanced at the sign to refresh his memory—"Mr. Steckmeyer."

"No; I don't."

"Maybe you'll hear about something. I could come in and ask you in a day or so." He picked up his suit case and started to go. "The name is Hammerton."

"The name is *what?*"

"Dudley Hammerton. 'Most everybody at home calls me 'Dud.'"

"YOUR name is Dudley Hammerton?" The merchant was clearly amazed. "Can you prove that?"

"Yes, sir. I have a letter from the Reverend Nickleback, of Carter's Corners. It's here in my grip."

"Why didn't you go down to"—the man's eyes narrowed and he hesitated—"down-town where the big stores are?"

"Well, I guess I will," Dud answered.

"Wait a minute. Come inside and let me see your letter."

Of course Dud knew that when you go to a city you have to beware of sharpers and slickers; but a fellow who has nothing but four dollars, a good name, and a "cattycornered" dog doesn't have to feel nervous. His good name, represented by the letter from his pastor, he kept in the grip where it would be safe from pickpockets; his money was in a purse which he felt against his chest; his cattycornered dog he now left outside peering through the screen door.

"He's not my dog," Dud explained. "He just followed me up the street."

The clothing store seemed to be a one-man show, for no clerks were visible, and

Digitized by Google

STATE UNIVERSITY SYSTEM OF FLORIDA

customers. Mr. Steckmeyer led the to an elevated little pen which served an office. There Dud opened his bag produced his precious letter. Mr. kleback testified to the fact that dley Hammerton was a member of his k, an honorable and industrious young n. "He bears a good name in the comnity," the letter concluded.

The bag contained one more credential, newspaper clipping setting forth the t that Dudley mmerton, of Car- s Corners, had won e corn-husking ampionship of sago County. ese two papers re his jewels.

Now followed the ple annals of his . His father had d a few years bere, leaving his ther and himself h a small farm. e struggle to make living had proved rd at this time of pression, and they d finally decided at Dudley was to to some city and k his fortune. When he was safely tablished, his mother would sell out and me to live with him. So now the rvest was over and the wheat was sold, d he had set out on his great adventure.

"Why did you come to Branford?" r. Steckmeyer asked. "Got any retions here?"

"No; but it was the biggest town I uld afford to come to. I didn't have uch money left after I bought my cket, but my mother says a healthy, illing young fellow can always find ork."

"You don't know anybody in town en?"

"No, sir."

"How would you like a job here in my ore?"

DUD had not thought of being a society clothier—something in the way of rain, feed, or agricultural implements ould have been more in his line, or work onnected with horses and cows.

"Of course, I don't know much about lothing," he said, perhaps needlessly.

"That's all right. can teach you. I like our honest face; I like what the Reverend Nickleback said about ou; I like your good ame." The haberlasher struggled as with n impending idea. "In act, I wish I had you or a partner. 'Steckneyer and Hammerton!' How would that ound? No, this would e better: 'Hammerton and Steckmeyer, Society Clothiers.' Think of that on a big ign out there!"

Dud was frankly incredulous. Unversed as he was in city ways, he yet knew that a boy does not get off a train, walk up the street a couple of blocks, and be taken in as a partner by a total stranger in a line of work he knows nothing about.

"I guess you're making fun of me."

"No, I'm not, Dud. I mean it."

"I've got no money to buy into the business."

Amazingly, that too was all right. The junior partner would be put on wages of fifteen dollars a week while he learned the trade, and before long he would get a share of the profits.

Dud's mental machinery was sturdy and dependable, but not geared for high speed. Back in Carter's Corners there had been no great hurry about anything. He now thought over Mr. Steckmeyer's incredible proposal. It was too good to be true and there was something about it he distrusted; but a job is a job and he was low in funds and used to eating regularly and sleeping in bed.

"And an elegant new suit, free of charge," Mr. Steckmeyer inserted at exactly the right moment.

"Well, all right," was Dud's momentous decision.

"Come around to-morrow morning and I'll have the papers all fixed up," said Mr. Steckmeyer. "I'll order a new sign painted too. But I want you to promise me one thing."

It was coming now. Dud knew there would be thorns in the blackberries.

"What's that?"

"That you won't tell anybody about this to-day." Dud was relieved that the condition was such an easy one. "Don't mention my name to anybody until to-morrow."

"All right. I give you my promised word."

Dudley put his credentials back in his bag and inquired about a good cheap place to live. Mr. Steckmeyer directed him to a section where the lower-priced boarding-houses grew most thickly, and shook hands cordially with his new partner.

"Then I'll be at your store early to-morrow morning," said Dud in parting.

"*Our* store," said the staggering haberdasher.

AS HE regained the street, still dizzy from his sudden turn of fortune, Dud's attention was called to a personal matter which in the press of business he had forgotten—the fact that he had a dog. Alexander greeted him affectionately after their painful separation, vibrated his stubby tail and wiped his dusty feet on Dud's new pants. On the journey toward the boarding-house district the lopsided dog forged ahead like a sailboat tacking into the wind. Dud was rather sorry than otherwise that he had acquired Alexander. It was not the kind of dog for a society clothier to own.

In the next half-hour he was even sorrier. Dud knocked at a promising front door and stated his case to a severe lady. Suddenly there was an outrageous hubbub in the yard, and Alexander was revealed standing with his forepaws against a tree trunk. The tree contained a cat, which was spitting and using bad language. It did not look like a very important cat, but it seemed to be the apple of this landlady's eye and she stated frankly that riches would not

Zack was the first to speak: "Where did you get that there dog?"

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

tempt her to take a boarder who had a dog. Dud had no riches to tempt her with, but he tried to disown the animal. He got nowhere with this cock-and-bull story, because Alexander's loving conduct made it clear that they had been cronies for years and that chasing cats up trees was their life work.

When they regained the public walk, Dud saw clearly that he must get rid of this liability which was hampering his career. He stamped hard on the sidewalk, though this hurt his aching feet, and yelled: "Go home!" Alexander joyfully swarmed upon him; home was where the heart was. The desperate Dud now found a little stick and hurled it violently and with careful aim, so as to come near hitting the dog. This was more than Alexander had dared to hope; he pounced with delight upon the stick and brought it back to his big playmate. Obviously, he wanted to spend the day at this sport.

"I'll just have to keep the little cuss till we come across his owner," Dud thought.

HAPPILY, the next "Boarders Wanted" sign was on a house which had a sound picket fence around its yard, and by kicking processes he succeeded in letting himself through the gate without Alexander. He was getting on well with this new landlady and was looking at a satisfactory room, when another difficulty arose.

"I get ten dollars a week for this room with board," the woman said. "Strictly in advance."

The price was not excessive for a person in Dud's station of life (his next station, at any rate), but he did not have ten dollars. His preparations and his journey had cost more than he had expected.

"I'll pay you three dollars to-day," he said. "My job begins to-morrow."

He was eager for this little room. There was an agreeable smell of cooking in the house and he had not had a square meal since the last one with Mother. He wanted a good wash-up to remove the railroad grime, a substantial dinner, a chance to take off his shoes and ease his aching feet and perhaps take a little nap after his night of broken rest.

"My rule is a week in advance," the woman said; "but I might make an exception for once, since you've got work. Where is this job of yours? I can telephone your employer and make inquiries?"

"I can't tell you that, ma'am. I gave my word not to mention it to anybody till to-morrow. I could make it four dollars."

But the landlady's face was now freezing up; she must have had bitter experiences that had hardened her womanly heart. Clearly, he was an object of suspicion.

"I've got a letter from my minister." Dud opened the bag; but the lady's practiced eye told her that his underwear and nightshirt were not those of a capitalist, and she would not look at his exhibits.

"I'll ask you to go now," she said coldly. "I think I smell something burning."

"Don't turn around!" she whispered. "They's a policeman peekin' in and givin' you the once-over"

Obviously nothing was burning; she only wanted to get rid of him. He put his good name back in the bag and dragged his aching heart and feet back to the front gate. He got a moment of comfort from the thought of how chagrined the woman would be when she saw the sign: "Hammerton and Steckmeyer, Society Clothiers," but even that mild pleasure was brief. She had not looked at his letter or heard his name.

ALEXANDER, whining at the front gate, was pathetically glad to see him again. Dud tried two more places, while tantalizing odors of other people's dinners assailed his nose, only to meet fresh rebuffs. Nobody wanted a travel-stained boarder with only four dollars, a paper suit case and a slanting dog; nobody believed his queer story about an unmentionable boss. He could not go back and tell Mr. Steckmeyer he hadn't enough money to get into a boarding-house, for this damaging news might ruin their tender young partnership. Better go to a cheap hotel for the night, and make other plans to-morrow after the papers were signed.

As he approached the business section with this thought in mind, he suddenly became aware that he was passing an eating-house, a place lacking elegance but obviously suited to his purse, and with a screen door to keep out flies, and dogs. That is how he entered the Epicurean Café (or Joe's place) and the life of a bedraggled waitress named Tillie.

When he got inside this house of nourishment Dud had a diffident feeling that he was intruding upon somebody's privacy. There was nobody in the restaurant except this waitress, and she displayed no interest whatever in the fact that anybody had arrived. Dud set down his bag, took off his hat and stood in an attitude of deference while the young woman swabbed off a table top. Finally she said in a surprisingly unmusical voice:

"Do you want some chow, or did you just come in to give my eyes a treat?"

"I'd like dinner, if it's not too late. I don't want to give any trouble."

THE girl mistook this chivalry for irony.

"Oh, it's the village cut-up, is it? All right, Silas, park yourself right here. But don't try to get away with anything."

Her words were meaningless to him, but he took the proffered chair, studied the menu and ordered food stuffs of the plainer and more filling sort. This collation would practically ruin a dollar bill, but a man must live. These viands were cooked with speed and delivered with noise; then the waitress greatly surprised him by pulling out a chair from Dud's own table, and sinking into it with an explosive sigh.

"Don't mind me, Silas. I ain't been off my feet since ten o'clock, and they're both a-hollerin' for mercy." Branford, apparently, was a city of aching feet.

"Yes, ma'am, but my name is not Silas. It's Dudley."

"My mistake. And my name is not 'Ma'am,' it's Matilda Leffingwell. The wise-crackers that feed their face here call me 'Tillie, the Toiler.'"

"Pleased to make your acquaintance." This was mere politeness, for Dud wanted food, not society.

"What do you work at when you're workin'?" she asked.

Caught between gallantry and his solemn word, Dud wriggled out with this: "I'm a society clothier."

Tillie looked him over skeptically.

"You ain't a ad for your business."

"Not yet."

His economical habit of speech was now noted.

"How come you are so stingy with your words? Are you saving them up for a rainy day?"

I'll say you have! You couldn't e—" Tillie's eyes, which were turned ard the door, now widened in surprise. on't turn around!" she whispered. hey's a policeman peekin' in and givin' the once-over."

Why?" asked Dudley.

He's kind of studying that bum dog left out there."

"That's not my dog; he just followed me around."

"Listen here, Dudley. Get this. You wait till I tell you he's lookin' the other way, then beat it out the back door. That cop is handin' you a awful dirty look."

"Haven't done anything wrong."

"Yes; but that's Zack Folsom and he's a nut. He's read s' many deteckative stories his bean is all dippy. He thinks he's a sleuth-hound. He thinks a lot of things that ain't so."

"Like what?" Dud declined to be panic-stricken until he had finished his repast.

"Like he thinks he's my boy friend. Maybe he's kind of mad how we are setting here so chummy. Now!" Tillie took down Dud's hat and started for the kitchen. "Foller me!"

Dudley followed the waitress and his only hat into the kitchen, but there he made further protest.

"I never did anything to get arrested for."

"Then he'll pinch you on superstition. You go back in the alley and crawl in some place a while and lose that bum dog. I'll steer Zack off somehow. Do me this favor."

"All right, lady." He could not resist an appeal to his chivalry. "But I've got to get my grip."

"I'll take good care of it till you come back. Beat it now. I heard the door slam. That dumb-bell is liable to come snoopin' in here any minute."

Dudley went out into the back yard of the restaurant, an untidy place of barrels, boxes, and garbage cans. An open gate led him into an alley, which he traversed until he came to a fenceless yard of some store or factory. Nobody else seemed to be using this weedy place, so he went in and sat down on a pile of boards against a shady brick wall. He wanted to rest his feet and think things over, so he took off his shoes. The relief was so great that life took on a rosier hue.

IN THINKING over current events Dud saw that there was magic in the name of Hammerton. Upon hearing it, Mr. Steckmeyer suddenly had changed from cold to warm and had promptly offered him that astonishing partnership. Tillie, also, had been impressed, and had become concerned about his welfare, almost too much for comfort. Perhaps if he had told his valuable name to those haughty boarding-house ladies his reception would have been different—except, of course, the one with the cat. For some unknown reason Hammerton was a good label in Branford. The waitress was evidently about to take this matter up when the policeman came.

Dud had no apprehensions about this cop who was studying detecting, for he had been brought up in the faith that an upright young man could look anybody in the face without fear. He would not have run away except to oblige a lady who was afraid of her beau. There was one good thing about the affair, however; he had given Alexander the slip. A nice, friendly little dog and all, he was, but a drawback just now.

Thus, with an easy conscience and easy feet, a pleasant drowsiness stole over Dud's extensive frame. He had spent the night in trains and in a little railroad junction where the station benches had iron partitions to keep the traveling public from lying down. A model young man in Carter's (*Continued on page 119*)

d jumped from the unexpected volley sound. This was certainly the craziest ck of humans he had ever known

Five Years Ago He Tried To Give Away Half His Business

This seemed the only way in which William A. Burnette could meet crushing obligations, but the company to which he made the offer turned him down flat—To-day his sales run to more than a million dollars a month, and he has branches in twenty-five cities—The story of an impoverished teamster's struggle against terrific odds

By John Kidder Rhodes

TO THE ears of the teamster, halting midway up the mountain to let his mules breathe, came faintly the clangor of a bell. The boy looked down into the valley, and what he saw troubled him.

"There," he chided half aloud, "is where I ought to be now."

Far below, like pieces in a game, young men and women were emerging from the doors of a schoolhouse. Broodingly he watched them as shreds of their laughter and shouts reached him. And as he watched, sharp memories of his mother stirred within him. By some miracle, the ambition bequeathed by her to him had remained alive in this out-of-the-way spot.

To others, perhaps he was nothing but a rough-handed laborer engaged in the rugged task of hauling logs over the mountain. But in his own dreaming heart dwelt a hunger that ached, a thirst that burned, and for him, he knew, there must be somewhere in the world a great work waiting. The nature of it was not clear. The way to it was dark. But somehow, he felt, a way would be found. And as he sat watching, it came to him almost with the urge of a spoken command:

"Begin! *Make a start!*" He obeyed that command. And the sequel was far beyond his dreams.

The story of William Anderson Burnette, mountain teamster, minister of the gospel, business man, is one of the great stories it has been my privilege to hear.

Strange were the years, nineteen of them, which lay behind him that day as he sat on his wagon above the village of Jasper watching girls and boys who, unlike him, possessed the privilege of going to school. Stranger still, though he could not guess it, were the years ahead. An uncouth, untutored son of the Tennessee mountains he was then, and since that day only twenty years more have passed.

But into those twenty years have been crowded, among many other things, eleven years of schooling, the earning of two collegiate degrees, hardships and discouragements sufficient for half a dozen lifetimes, the filling of many pulpits and of several pastorates, the founding and building of a phenomenal business, and an influence ever-widening, ever-deepening, on the lives of thousands of human beings.

That lad of the wagon is to-day president and largest individual owner of the Club Aluminum Company, with factories in Chicago and Baltimore, branches in twenty-five cities, close to one thousand salesmen and plans for five thousand, and sales running to a million dollars a month.

These are the bare, cold, outer facts of his career. Back of them lies the story of a youth inspired by the hope of living a useful life, who dared to dream and plan and try, however humbly, and of a man who amazingly realized and surpassed the youth's vague, troubled dreams. The stirring message of his life is told in a few simple words of his own:

"When a man tries, really tries, a way is made clear."

The start for William Burnette was in poverty, narrow, binding poverty of the Southern highlands thirty-nine years ago. The Burnette homestead was a two-roomed house in the Sequatchie Valley, in southern Tennessee, five miles from the nearest railroad and town, and twenty miles by bad roads across the mountains northwest of Chattanooga. A lean-to kitchen was added to the two rooms eventually, and part of the scaffolding was erected for a projected second story; but funds or ambition gave out, and the upstairs rooms never were finished.

AROUND the house there was a little good land which could be cultivated. The family owned, also, a couple of other fields in the valley, but the entire property was worth at the outside a few hundred dollars. This, for William Burnette, for fourteen years was home. Here to him came dreams.

Experiences of those years and of the years since, indelibly have written their story in his features and manner. Only thirty-nine and youthful in face, yet his hair is iron-gray and he might be mistaken for fifty. His eyes have quiet, steady depths. His lips are molded with the firmness of strength and courage exercised as matters of daily habit and necessity.

"I have never quite been able," he said to me thoughtfully, "to explain why and how it was impressed on my mind early in life that I must get an education. Neither of my parents went to school much. Indeed, there were few good schools to go to, for we lived in a section of the South that had suffered terribly during the Civil War, and still was far from recovery.

That Tragic Word, "Almost!"

"A MAN once told me," says Mr. Burnette, "that all he was looking for in this world was a living—and he didn't intend to kill himself getting it. That man, needless to say, hasn't gone far. The first obstacle that seriously blocked his path caused him to quit and look for something easier. There are many men who will try up to a certain point, and then, because they hate to exert themselves too much, take an easier route. They remind me of a story I once heard of an Indian who preserved his meat by hanging it thirty-three feet in the air. Asked for an explanation, he said that flies would go thirty-two feet off the ground, but no more, even for a fine meal. This story may not be true to fly nature, but it is pretty true to human nature. Many men will go just so far, and then stop. With the prize almost within reach, they won't put forth that last little ounce of energy and effort."

"My father had attended only the common schools; but by working in a doctor's office, he had picked up a smattering of medicine. By virtue of this, he became known as the country doctor of our neighborhood. His practice was negligible, often amounting to nothing at all for days at a time; nevertheless, he looked upon himself as a professional man and excused himself from other duties on this ground.

"My mother, no better educated than he, was energetic, and ambitious to give her children a fair start in the world. She frequently worked all day long in the fields. Indeed, it was overwork of this kind, coupled with lack of care for herself, that eventually brought on tuberculosis, and caused her death when I was fifteen years old."

Her memory endured as a living challenge to her son. A score of years later, in a message to his associates, he told of a pledge written on his heart:

"While she died young," he said, "I do not intend that she shall have died in vain. I purpose to make my life as fruitful as possible in order that my mother's memory may be honored. I am going to live a life of hard work, sacrifice, and service, because I know that such a life would be pleasing to my mother. I feel her influence, just as if she were living. Her hand and her voice will continue to express themselves in all that I do."

ON THE little Sequatchie Valley farm, Burnette had no real boyhood, in the sense that most boys have.

"I cannot remember the time," he confessed, "when I did not feel the responsibility of a man; and I can scarcely remember the time when I did not do the work of one. At eight and nine, even, I could trudge from morning till night at the handles of a one-mule plow, besides attending to milking, wood cutting, hoeing, harvesting, and many other necessary tasks.

"One of those tasks particularly appealed to me. You can easily see, from the way we lived, that there was very little cash coming in or going out. But we did have one money crop, and that was wild blackberries, which in season all of us picked on the hillsides. It was my job to take the berries to Whitwell, the nearest town on the railroad, where I peddled them for what I could get—usually twenty cents a gallon. One season I sold three hundred and eighty gallons."

In this liking for selling perhaps lay the seeds of what came later.

"As I said," Mr. Burnette resumed, "I had it firmly in my mind, possibly thanks to my mother, that sometime I was going to amount to something, and must somehow get an education. But our schools were the poorest imaginable. The schoolhouse itself stood on a hill a mile and a half from our home, and on Sundays did double duty as a meeting-house.

"School kept, as a rule, about five months a year. My attendance was intermittent. My parents thought nothing of keeping me at home to plow, or for any other work. Even when I did go, it was a case of the blind leading the blind, for the teachers knew little more than the pupils; often they had advanced no further than the eighth grade. I went as often as I could, however, until, if I remember correctly, I was twelve. After that, I went no more at all until I was nearly twenty."

PHOTOGRAPH BY FULTON-LAWSON CO., CHICAGO

William A. Burnette, a Tennessee mountain man, is president and largest individual owner of the Club Aluminum Company, which has factories in Chicago and Baltimore, and branches in many other cities. Mr. Burnette was born high up and far back in the mountains, thirty-nine years ago. He had but little schooling before he was twenty; but starting in earnest then, he educated himself for the ministry, which profession he left to go into business

MEANWHILE, there were family changes. Burnette was fourteen when two of the pieces of land were sold for enough to buy two teams of mules, and the household moved to Chattanooga. The next year, his mother died. Home ties began to loosen a little. To support himself, the youth did the roughest of day labor, for a laborer's hire.

"My first job," he said, "was hauling concrete paving blocks. Later, I took other hauling jobs. Several years passed in this way. The last job of the kind was hauling logs from forests over toward the Sequatchie Valley and our old home, down the mountain to the town of Jasper, and a sawmill."

The mountain road was steep. The lad would sit on top of a swaying load of logs, some of them large enough to yield fourteen hundred feet of lumber, with the reins in one hand, and in the other a thin cord attached to the brake stake. His pull on the cord was all that kept the wagon from tearing loose and taking logs, lad, and mules on a wild ride to destruction. Several times the wagon did tip over, and the boy had narrow escapes.

This, then, was the job he had when he used to pull up his team and watch with envious eyes the students of the Pryor Institute, near Jasper.

"They were my immediate inspiration," he said. "I knew I must prepare. Long before this, I had thought of entering the ministry; not, perhaps, because I felt irrevocably called to it, so much as because it offered the best way I knew to give rein to my inner impulses and ambitions."

So, in the fall of the year when he was twenty, this rude son of the hills went back to school and took up the books and lessons of a boy of ten. A few meager dollars saved out of his earnings were all he had for his support. However, he did not need much; nothing in his earlier life had taught him (*Continued on page 63*)

Debt Is The Only Adventure A Poor Man Can Count On

At twenty-five dollars a week, with a wife and two children, I've as much chance of paying what I owe as Rockefeller has of dying poor — but I'm happy just the same

By Archie Chadbourne

I'M a poor man; that is, poor as far as worldly goods and possessions are concerned. In fact, I belong to that great class of respectable poor who barely make things go, who survive solely by borrowing from Peter to pay Paul.

Yet if anyone offered us (yes, I'm married and have a family) charity we'd be mortified to death. Not that we couldn't use it, but we are a proud lot, we respectable poor. I remember one year I froze my feet all winter and blistered them on the red-hot pavement all summer rather than let anyone know that I couldn't afford to get my one pair of shoes resoled.

I am not attempting to make you think I enjoy poverty. I just want to show that, though I really am needy, I've got to put up a front. I've got to keep folks from knowing just how poor I am.

I have been at this poverty game now for over twenty years. Last May was my wedding anniversary month. But do not infer that I made a mistake in taking a wife. The girl made the mistake, though, through all these thin years, she has not said so. I married well. Whenever anybody looks at my wife he looks again at me. He thinks there must surely be more to me than he suspected at first glance. And my value goes up. That's the kind of wife *I* have. No; marrying Ione has nothing to do with the fact that I date my poverty from my wedding day.

Before I married I had no worries. When I felt the urge to change my location I merely hopped a freight train, and, presto! the change was made. When I tired of one job I got another. If I had money, I laid off and spent it. When I was broke I got me another job.

But when I married that was all changed. For the first time I *felt* poor. It was the realization that here was I, with a wife whom I had promised to love and cherish and, presumably, support. I had no reserve fund. I had a job with no future to it. It would be the same old job in twenty years that it was on my wedding day. I know, because I still have the same job of truck driver for a department store. The only thing about it that has changed is the salary. I had twelve dollars a week when I married. I now have twenty-five.

I persuaded a dealer to provide some furniture at nothing down and almost nothing a month, bought a brand-new cottonade suit, which didn't bag until after our three-day honeymoon, and Ione and I went to housekeeping in a house for which I was in debt for the first month's rent.

And I've been in debt ever since.

The poor man's greatest adventure in life is debt. He always has it confronting him. He cannot go around it. He cannot go through it. He must go over it or under it. Usually, he crawls beneath it and is crushed sooner or later by the weight of the accumulation. The economist says debt is unnecessary for the poor man. He should pay as he goes, and if he would only budget he would soon lay by money. Apple sauce! I hate to think what would happen to business if we took half the advice offered by men who have figured out how much interest a penny compounded annually would bring a thousand years from now to our progeny, if any.

THEY say the first dollar is the hardest to save. As far as a lot of us know, it is. Take a look at my present budget and then trade places with me if life has become prosaic with you: Groceries, $48; fuel, $7; rent, $23; lights, $2; 'phone, $2; Life insurance, $1.45; auto upkeep, $4. Total, $87.45.

Oh, you say, that isn't so bad. You earn over a hundred a month. There's a balance left, of, at least, fifteen dollars a month. Where's the joker? Let me show it to you. To begin with, I went in debt for every stick of furniture we have. Then the budget does not show clothing for four people. We have two daughters, fifteen and twelve years of age. It shows no provision for doctor bills—and doctors do not bring children into the world for nothing. It shows no dental work, no glasses for Papa and Mama, no Christmas gifts, no unexpected company to run up the grocery bill, no schoolbooks. It does not include the instalments on idiotic things that poor folks are always buying on the instalment plan. The joker is there, all right.

I am reminded of the story told by a charity worker who had given an old woman some money to buy food. Next day this charity worker discovered that the old woman had purchased a canary. Think of that! She was furnished charity for absolute necessities, and bought a *canary*. Well, bless the dear old lady's heart, say I. Perhaps the song of that canary was what she needed more than food, more than clothing. Maybe that song brought forth a memory that smothered the pangs of hunger for longer than a minute. "But, of course, we had to take the canary back and buy the woman food," said the worker. Of course. I can see that point of view too. The only way the old lady could have kept the canary would have been to go in debt for it, or for food.

And the only way in which we poor can live is to go into debt for necessities and for so-called luxuries. Notice that I said "live"—not "exist." Living does not mean merely to draw breath. Man has a mental and spiritual as well as a physical side.

I owe something like $681.39, and I've got about as much chance to pay it off as John D. Rockefeller has of dying poor. By that I mean that, in order to pay any of these debts—distributed among everybody with whom I do business—I'll have to incur other debts. Sometimes the grocer will come to me, and say, "I can't let you have any more credit." That used to about kill me. Now, I merely say, "All right. I'll pay you just as soon as I can. Much obliged for the credit." And I'll go hunting for a new groceryman to give me credit while I pay off the old one. Now, there is a credit association of grocers and my name is on the lists as 'too slow for credit.' I've seen it there. But somewhere there is always a grocer who will take a chance at me. And after I get the first groceryman paid off, even if it takes me three years, I can come back and hit him for more credit, and he'll let me have it.

IT'S that way with everything. Somewhere there's a creditor if you can hunt him out. And they're mostly nice fellows too. I've made it my business to take care of my creditors. I never pay them all up. I can't. But I don't have them coming to the house bothering Ione. Every so often I make a call on them, even though I can't pay them a cent. I used to think that was as hard as facing a firing squad, but I've grown to take it as part of the great adventure of living in debt.

Occasionally I feel that if I could get all my debts in one place, I'd be able to handle them better. Then I hie me away to a loan broker. Once I went to a firm that was organized to loan money to poor people, in order to stop some of the

urious interest arged by loan rks. I could have e to a loan shark l inside of thirty utes come down h a loan. But this npany is as slow government claim partment.

chased up to the ce every day for weeks. I gave manager my pedi- e, my budget plans, l itemized what I uld do with the ney, and crawled out the office furni- e on my hands and ees while he puffed a lazy pipe and ally told me to me back to-mor- w. And there was other to-morrow er to-morrow. Evi- ntly he worked on principle that if a n is dishonest or t in dire need he'd it coming back. ell, I wore him wn until he finally ned me twenty dollars less than actually needed to set me going, d I had to pay twelve per cent, new every three months, and allow all his advice just like I en- yed it. At that, if I had money to an I think I should let him loan for me. He'd never lose it by be- g over-zealous in loaning it out.

ONE and I decided we must have an automobile. It became an solute necessity (as such things become if you talk about 'em ng enough). So I shopped around r a car. A lot of fellows laughed me, but I found a ten-year-old r that could be bought for sixty llars, five dollars down and five llars a month. We had figured at amount as being the saving in reet-car fares we should make if e had a car.

I suppose the automobile has ade more liars than any invention nce the fishing rod, but I want truth- lly to say that that old hip-sagging car f ours sure could get there. We live in ountain country. I can go up any hill ny other car can go, and the upkeep is ot so enormous. I buy my tires of the nk man. He has a wonderful pile to elect from, and by picking over four or ve hundred casings I can usually find ne with but a single blow-out. I pay him fty cents, put in a piece of casing, and way we go for a couple of months. I've ad blow-outs in about every scenic spot f this region, and we've driven along as nconcerned as if one tire was not as flat s the traffic cop's feet.

I admit the car costs a little more oney than we anticipated. We've used t more than we thought we would. But, h, boy! the pleasure we've had. My eighbor was uncertain whether to buy a ar or mend his roof. "Buy a car," I old him. "If the top of the car leaks, mend it, but don't waste money on a house."

I mean it. We're going to live in this world but once, so we must keep up with the crowd, no matter the cost. We bought a second-hand phonograph—on payments. We buy records for twenty-five cents each at the exchange. Right now, our two girls, Edyrl and Lyril, shape what we play. They like such stuff as "Shake a Leg" fox-trot, while Ione and I would prefer to listen all evening to "Rest, Rest for the Weary." Next year we are going to buy a radio to balance things up. We have a car to take us away from home. Now we'll get a radio to keep us home.

I BELIEVE I am a fair representative of my class of poor. I haven't run away from any debts yet, but I can sympathize with the fellow who has.

We are very sensitive, we poor. Scientists call it inferior complex. But it isn't that any more than it is the superior complex of some others which aggravates that sensitiveness. We are very susceptible to affronts. We do not actually feel inferior, but we accept unintentional slights and hug them to our breasts under the delusion that if we were rich and had position we would have no slights.

I remember the first time Ione's mother came to visit us. She brought me a suit of clothes, saying Ione's father had a suit just like it, and thought so much of it that he wanted me to have one too.

I don't think Ione's people realized how I needed that suit, but I was super-sensitive. I went up in the air like a rocket, did a tail spin and threatened to crash my matrimonial ship into smithereens, all because I needed a suit of clothes and my mother-in-law had brought me one. That suit hung in the closet for over a year, while I sported about with my elbows out and the seat of my trousers looking like a piece of netting rather than cloth.

It took me several years before I could bring myself to patronize the models shown in the second-hand clothing emporiums. But I've learned that I can get a fairly good suit of clothes for ten dollars; one that has seen better days but is yet good for considerable wear. Occasionally I can pick up an odd pair of trousers or underwear or shoes at the Salvation Army store, and usually there is stuff which Ione can make over for the children.

The Misunderstood Mule

By James C. Derieux

ILLUSTRATED BY WILL JAMES

THE mule has a kick coming to him, and right often he makes the most of it! Why shouldn't he? Nature disapproves of him, so puts a ban on his reproducing himself. Man laughs at him, frequently neglects him, sometimes abuses him, and rarely accords him that full measure of respect that any distinct personality is entitled to. He is, in the animal world, a hewer of wood and a drawer of water—a son of Martha, so to speak. His always is a lowly rôle.

Yet the mule is a great animal! George Washington wrote of his kind as "an excellent race of animals," and once declared his intention of using mules to draw him in his fine carriage. Moreover, General Washington did all he could to establish the mule in this country. Washington was a great farmer, as well as a great general and a great statesman. He let his interest in mules be known, and the King of Spain sent him a fine jackass, which someone christened "Royal Gift." Lafayette also sent the General a jack, and this one was known as "Knight of Malta," because he came from the island of Malta.

Henry Clay was another early American propagandist of the mule, and an importer of jacks. So the mule is entitled to a higher social standing than he actually enjoys. These statesmen left their imprint on American farming—left mule footprints on the sands of time, so to speak—and their jackasses reciprocated by leaving their imprint on statesmanship.

The mule, as everyone knows, is the offspring of a mare and a jack. If it's the other way 'round, his sire being a stallion and his mother a jenny, he isn't officially a mule at all, but is a "hinny." The mule is an old resident on the face of the earth; he's been here since so long ago that no one seems to know positively just when he first brayed his arrival, and always his tasks have been those humble, unspectacular, absolutely necessary tasks. The glory goes to the horse, and to other animals. Only the arduous work is for the mule.

Some time ago I talked all morning with a veteran "mule man" about these interesting hybrids. There were a hundred questions I hoped he might answer, questions that in my observation of mules I had never answered.

"Why is it," I asked, "that you can't often lead a mule if you look at him, but must turn your back and walk away if you want him to follow?"

"I dunno," he answered; "it's just one of his peculiarities. He doesn't seem to like a man's face."

"Why is it that a mule is more afraid of a bridge than a horse, and will not go near a hole that he might fall into?"

"I dunno," came the answer. "It's another one of his peculiarities. Maybe he's got more horse sense than a horse."

"A mule will rarely if ever overeat," I said, "even if you put a wagonload of food near him, and he will not drink too much water when he's hot. Why is that?"

"Search me," said the mule dealer. "It's just his way."

"Then tell me," I persisted, "why a mule has the reputation of being stubborn, and mean."

"WELL," said my friend, "most folks don't understand mules. They mistreat 'em. They haven't any respect for 'em, and the mules pay us back by not having any respect for us. Now, take a case like this: A farmer comes in here to my stable and buys a mule. That mule is maybe too young to be strong, or maybe too old. Anyway, he's just been shipped here on a train, and before he was put on the train he had been pastured or kept in a stall all winter.

"He hasn't had any exercise to speak of for some months. But the fellow who buys him takes him home right at the first of plowing season, and he expects that mule to work all day from the start. The mule gets tired before sundown, and begins to go slow, or maybe he stops in the field. The fellow gets mad and cusses him, then lams him with a stick or something. That makes the mule mistrustful of his new owner, and from that time on there ain't any real cordiality between 'em.

"A mule ain't any meaner than a horse, except that people are mean to him first. You can't blame the mule.

"A mule can stand neglect better than a horse. He's hardier, and he's tougher in every way. His skin is thicker, so a whip doesn't hurt him like it does a horse. He's sure-footed, so not so likely to fall and hurt himself. He ain't greedy with either food or water. Men know this, and they just conclude that it doesn't make much difference how a mule is handled. But it does. It makes all the difference between a mean mule and a good one. And, besides, a well-treated mule will outwork a neglected one, any day.

Digitized by Google
Original from
STATE UNIVERSITY SYSTEM OF FLORIDA

"Yes, sir, I've been handlin' mules for a od many years, and I've come to believe at the trouble with the mule is his vner. You've got to show respect for a ule to get him to show respect for you."

I checked up on these inions with any num- r of "mule men," and und they were more or ss of one mind on the bject. A mule is a eat work animal, de- ite the treatment he ten receives. He does nazingly well, when ou consider the fact at, as everyone who rites about mules re- inds you, he is "with- it pride of ancestry or ope of posterity." The eat life principle that eeps every other form of imal existence on the rth, is denied to him. n only a few instances ave mules had colts. There is a mare mule in Texas now that is aid to have had two colts.) So the mule as a right to be an iconoclast. And he has biological right to be a whole lot worse an he is.

The mule inherits the size, strength and actability of his mother; the ears, feet, nd, to some extent, the voice and phi- osophy of his father. He is one of nature's nconscious humorists. Or perhaps his umor isn't so unconscious, after all. nyway, he has a way of doing funny hings, as if by design.

I was talking one day with a major in he U. S. Marine Corps. Like other vet- eran marines, the major had been every- where, and seen everything. The talk urned to mules.

"They're funny animals," said the najor. "Once when I was in Haiti I had o take a long ride over some rough hills, nd I selected a mule, because I knew he vouldn't stumble and fall with me. All lay I rode him hard, for I wanted to get ack before night. I didn't take ime to feel sorry for him, and he didn't seem to mind. Along toward vening I came to a clear, deep tream, and decided to get a drink of water. I got off the mule, urned him into some nice grass, nd went over to the stream. 'Ah!' I said to myself, 'that water looks good!'

'I GOT down on my hands and knees, and then leaned forward so that I could get my mouth into the water and suck it up. The first swallow had gone down—or up—and it tasted the best in the world. Then something happened. I thought somebody had shot me with an old-time cannon! Head- first, I was knocked into that little river, and I didn't come up again until I was near the other side. I was wet as a soused rat, but my hips were on fire! That mule had sneaked away from his grass, backed up to me and kicked me with everything he had! I had two big bruises, each one the size and shape of a mule's foot, for weeks, and they were in the most unhandy place there is! Yes, sir, that mule acted from design. He was mad at me because I had mistreated him by rid- ing him too hard. And he got even!"

I have seen a good many things that

seem to bear out the major's opinion that mules act by design when they pull their comedy.

I once knew a veteran fox-hunter who always rode a mule on the chase. "They're more sure-footed than horses," he explained, "and are not so apt to break their legs or your neck by fallin' in stump holes."

ON ONE memorable chase the fox had been started after midnight, and had run all night until daybreak. The hunters were worn out and hungry, so this old sport drove his mule under a tree where a wild grapevine grew. He stood in the stirrups and, reaching up, caught a branch to pull the grapes down to him. Just as he did this, the mule walked out from under him, proceeded to the edge of the woods and started to graze!

The man was afraid to let himself drop to the ground, for he had reached the age where legs become brittle. So he held on desperately and yelled still more des- perately. Another fox-hunter, mounted on a horse, galloped up and rescued the mule-less rider. Then, to the accompani- ment of much conversation wholly un- suited to this article, the two men went to recapture the quietly grazing hard-tail. The horseman had dismounted, so they ap- proached the critter on foot. Each time they got near, the mule walked or trotted away. It was like a game of tag, and the mule was never "it." His owner finally gave up, and walked home. The hunt was over, anyway, so he might as well. The mule followed him.

A NEGRO tenant on my mother's place once had a mule that didn't like to pull a plow, or liked to tease his owner, I'm not sure which. Anyway, every time the negro stooped to fasten the trace chains to the plow, the mule would take one step for- ward. The negro would yank him back, or lift the plow forward. Then the little one-step comedy would be repeated. Two men were necessary to hitch that plug mule to a plow—one to hold him, the other to fasten the trace chains.

Another time I saw a little negro boy mount a mule and ride him to the water- ing place, several hundred yards from the stable yard. The mule drank all he wanted, and started back to the lot. The little negro was proud of himself on such a high mount, so he proceeded to pummel the mule in the ribs with his feet. The mule paid no attention until he reached the lot. Then, trotting up to within ten or twelve feet of a hamper basket full of shucks, he stopped suddenly, arched his back and pitched his diminutive rider squarely into that basket! It was one of the neatest tricks I have ever seen. The boy wasn't the least bit hurt, and the mule, once he had performed in a manner to show that he was not to be bossed by children,

appeared to be no longer interested.

I should like to stop with the joke on the fox-hunter and the negroes, but in fairness to them I'll have to relate that a mule once played a mean trick on me. I was hunting with my brother, and was riding a mule named Stogie. My brother had a horse. We had hunted all day, and were tired, when, about dusk, the dog pointed. It was a false point. Dogs are often deceived at that mystic hour of the day. "Sperrits fool 'em," so some negroes have told me. "And dis de time sperrits begin to walk." Well, anyway, dogs are unreliable after the sun goes down. But my brother and I thought our dog knew what he was doing, so we dismounted and walked up behind him. There were no quail to be flushed, or none that we could discover. We kicked into the grass, urged the dog on, and finally gave up.

In the course of that day we had probably dismounted and mounted fifty times, so we were both sore, and didn't feel like climbing aboard again. At least, I didn't, so I led Stogie to a deep ditch, put him into it so that I could step into the saddle, which was just about even with the surface of the field. I turned to laugh at my brother, who was clambering onto his big horse.

"Hey!" I called. "Why didn't you use your head and save yourself the trouble of climbing up? Watch me!"

HE TURNED to watch, and, still glancing in his direction, I stepped out to let myself down into the saddle. Stogie had walked about four feet forward, so I missed him completely and fell into that ditch, gun and all. Stogie's head was turned and he was looking at me with his ears pricked forward. A mule cannot laugh, therefore Stogie didn't laugh. But that's the only reason he didn't. Or he may have thought that my brother was doing enough laughing for the two of them, so that it was needless for him to try.

This inability of a mule to manifest his emotions, other than the emotion of irritation which he shows by backing his ears, is a distinct disadvantage to him. It is another reason why he is so frequently misunderstood; another stamp of disapproval nature has placed upon him. A horse can show affection by nuzzling up close to you, by whinnying softly, and in his general demeanor; but a mule lacks this gracious gift. He can bray; but nobody regards such sounds as he makes as love songs. I haven't any doubt but that the mule would enjoy a greater intimacy with man if he could demonstrate his feelings. But suppose he tries. What happens?

A relative of mine once had a little mule, and after watching that mule for a long time I concluded that she had a warm heart. She often did awkward little capers that seemed to be the result of affection. One day the son of her owner went into the lot, and this mule, Sarah, came trotting to him. He paid no attention to her, just walked on toward the barn. Sarah followed, then went ahead of him, and frisked about. Finally she turned sternend to, and kicked at him gently. It was her only way to caress him, and she didn't hurt him at all.

BUT the result was disastrous for the mule. A farm hand promptly slammed her with a piece of two-by-four. The boy for whom she had such an affection threw the peck measure he was carrying at her head. The boy's father, rushing through the gate, called down upon her all the curses that have been called down upon mules since they first failed to make man understand them.

Naturally, after this, Sarah was suspicious of men. She had done her darndest to make them like her. She had even gone so far as to hold in the power of her kick so that it was a gentle tap; but, for all her kindly pains, she got abuse.

I am not contending that a mule is wholly blameless for his position. There's an old bromide which reminds us that we get out of life what we put into it. The mule sometimes puts a kick into it—a well-meant kick, maybe, but a kick nevertheless—and he gets a kick right back. But I do have a smiling sort of respect for a mule.

That's the trouble! Even those of us who have due regard for him, mix a smile with the regard, and it is a smile at, not with, the mule. For, as I've indicated, he can't smile. Yet I respect him wholeheartedly, and if I were not afraid he would misunderstand the gesture, I'd take my hat off and bow low to him. Consider the mule's war record: It is not dashing. Not heroic. Just plugging. But how he did plug! In war times, there were any number of men who spoke in his praise. For the mule was a better war-horse than the horse, except in the spectacular rôles. He worked harder amidst hardships. He asked less and gave more. He kept his health, his strength and, except under provocation, his temper better than his half-brother. Any man who had to do with Army transport can tell you how invaluable the mule was in the war. He did his part, and got no medals for it.

But he did get something out of his noble rôle—he won favor in parts of the United States where formerly he had been but little used. Mules are popular in the South. They suit the negroes exactly. Possibly there is a fellow feeling between them, for they both, in a way, are subject to the will of their kin who occupy more favorable positions in civilization as it is now constituted. Anyway, the mule is the prize work-animal in the South.

He plows the fields, pulls the wagons, hauls the lumber, and is the general handy beast about the farms, lumber mills, sugar plantations, road construction jobs, mines, and other points of enterprise. His standing in the South, as a beast of labor, is impeccable, if one may use such a parlor word in speaking of such a barnyard animal. But in the North he has not yet come into his own, though he is on the way to recognition everywhere.

HIS war record is partly responsible for this. Men who were formerly a little ashamed to drive a team of mules are more willing to drive them now, for the mule has won his place in history. The foot of the mule is small, much smaller than that of a horse. This gives him purchase, in the woods, among rocks and anywhere on irregular surfaces; but it makes him more likely to slip on icy pavements, and that's one reason why you see so few mules in big Northern cities.

He can learn to walk where the going is slippery; but at first he doesn't like it. And he doesn't like to back, either. A team of horses will back more readily than a team of mules, unless the mules have been very carefully handled. This, too, is against him as a draft animal in such a city as New York. He doesn't like to back, because he is a naturally canny and suspicious animal, and wants to know always where he is going. He has a great fear of a hole, and when he is backing he can't see whether he is making for a hole or not.

But this same dread of a hole is valuable to the mule, and therefore to his owner, for it protects him against injury. I know of a mule that for three weeks or more was kept in a stall that had a hole through the wooden flooring. He never once got his foot through it. A horse, in that same stall, would probably have stepped into the hole the first night, and either broken his leg by jerking it up, or skinned his ankle.

The mule is no fool, despite the expression "fool mule" which you so frequently hear. Individual (*Continued on page 90*)

"What *Can* I Give 'Em This Year?"

Well," answers Mr. Ovington, "give a man something he can use, and a woman something that will surprise her"

By Mildred Harrington

MISS JONES," said an earnest little girl of eight who was eagerly watching her teacher open the Christmas packages from her pupils, "I bet ɜrything you got is a hankchuff!"

The little girl guessed right.

'Hankchuffs" had been the choice of ɜh of the youngsters who composed Miss ıes's third grade. For that matter, ɜy are a prime favorite with Christmas ɜrs in general. It has been estimated ıt in the United States alone approxiıtely one hundred million handkerıiefs annually change hands on Decemr 25th.

There are two good reasons why the ndkerchief is the most popular of all ts. In the first place, the purchaser has vide range of prices from which to make selection. You can buy a handkerchief r five cents or you can buy one for five ndred dollars, if you have that much!

In the second place, the handkerchief is pular as a gift because it is preëminently *useful* present. Nobody can have too any of them. And next to handkerchiefs popularity come gloves and silk stockgs. These, you will note, are also actical gifts.

According to Charles Ovington, presint of Ovington Brothers, owners of New ork's oldest and perhaps most widely ıown gift shop, the whole world nowaıys is giving useful presents. The day of e knick-knack, or "dust-catcher," is ɜr. Beginning as a clerk in his father's ore when he was fourteen, Mr. Ovington ıs been in close touch with gift buyers for ty-seven years. Certainly he has had enty of time in which to gather and sort ıt observations on folks and the presıts they select.

"There is less swapping of gifts at hristmas than there used to be," said Ir. Ovington. "I can remember when ıe majority of our women customers ıme into the store with a Christmas list hich was literally a yard long. Now, peoıe spend more on Christmas than they ɜr did, but they concentrate on members their immediate families and on a few iends who really count. Glass hatpin ɔlders made of test tubes wound with ıby ribbon, and dozens of similar knickıacks, have been replaced by the Christas card. In short, folks are getting more nsible about their giving.

"I know a family of five grown-up sons ıd daughters which has hit on a mighty ɔod idea. Instead of making each other gifts at Christmas, they give the house a present. Everybody chips in the amount he feels able to spend on the family that year, and they all vote on something they have been wanting a long time, and which they can all enjoy. One year they bought a davenport, and another year a beautiful rug.

"Somebody told me about a Southern preacher's family that uses a variation of this idea. The members of this family pool their Christmas money to buy presents for each other. Instead of half a dozen gifts, bought more because they fit the pocketbook of the givers than because they fit the needs or taste of the receiver, each member gets one really handsome article that he especially wants.

"For example, one Christmas the eldest sister, who expected to make a trip to Europe the next summer, got a fitted bag and a leather hat box marked with her initials. The same Christmas, a young brother who played football on the high-school team got the sweater he had been eating his heart out for all fall. The sister's present from the family cost forty dollars, while the boy's cost only ten, but everybody was satisfied. Each had got what he really wanted.

"IN SPITE of much excellent advice to the contrary," continued Mr. Ovington, "most folks still pack all their Christmas shopping into the hectic period between Thanksgiving and the twenty-fourth of December. A mighty chorus then begins to rise all over the country. From Maine to Texas, the burden of the wailing is the same: 'What *can* I give 'em this year?'

"For many people, the Christmas season is entirely spoiled by the nightmare of Christmas shopping. Last-minute shoppers—especially feminine ones—are so exhausted and confused during the final two or three days of frenzied buying that they make some pretty wild purchases. I shall never forget the woman who rushed into our store on Christmas Eve and bought a mustache cup for her nephew. She was half way home when she remembered that the young man was only ten years old! Of course she had to rush back again and exchange it.

"Every year, I am more and more impressed with the wisdom of the few far-seeing souls who spread their Christmas shopping over the whole year, storing the purchases until time to send them out. They save time, energy, and money, and they get lots more joy out of their giving.

"As a rule," said Mr. Ovington, "men don't spend much time buying Christmas presents. If a man is a bachelor and in love, he will put in hours hanging over show cases in a sort of rapturous agony, trying to choose a gift worthy of his beloved. In addition to a present for his sweetheart, an unmarried man will usually pick out something for his mother and for the infant nephew named for him; but he rarely bestirs himself further. If a man is married, he hands over to his wife a lump sum and dismisses the whole matter from his mind.

"THE bugbear of many a wife's otherwise tranquil existence is the annual pilgrimage in quest of Christmas presents for in-laws she has never seen. As one young woman complained, 'John informs me that I must get something for Aunt Emma, but he won't even give me a hint as to what would be appropriate. He has known Aunt Emma from childhood, yet when I ask him what she is like, he says vaguely, "Oh, sort of queer. You'd better spend five dollars on her."'

"People often say to me, or to one of my clerks, 'What would you suggest as a nice present for a man about thirty-five?' Or ninety-five, as the case may be. I have been selling gifts for nearly sixty years, and I firmly believe that there are just two rules to keep in mind when choosing a present for a man of any age.

"The first is: Unless you are thoroughly familiar with his likes and dislikes, don't give him anything *unexpected*. By this, I mean that the average man prefers the conventional socks, bedroom slippers, or handkerchiefs, to some novelty which does not come within the range of his interests. Haven't you heard men exclaim, 'Thank the lord, this year I got something I can use!' However, in choosing something useful, remember that most men like to select their own neckties.

"My second rule is: Don't give a man anything too *expensive*. If you give a man a present which is more costly than he could afford to give you, somehow or other he feels that you have put something over on him. In consequence, he is embarrassed and a little resentful. Especially is he likely to feel resentful if he is a young unmarried man and the gift comes from a woman.

"A married man," chuckled Mr. Ovington, "is apt to object to an expensive gift from his wife on quite different grounds. 'Please, dear, don't (*Continued on page 144*)

The Old Doctor

For nearly sixty years Dr. David F. Unger practiced medicine in Franklin County, Pennsylvania, and this article is the story of his life as told by one of his former patients

By Sara Sherman

A QUIET that was unusual even for the little mountain town rested upon it that June afternoon. The long rays of the sun shone through the drug-store windows as a group of the older men dropped in, as usual, to wait for the evening mail to be distributed. The minister was one of them.

"That was the best funeral sermon I ever heard," said one of the men. "You said what all of us was thinkin', but didn't know how to say. The Old Doc 'went about doin' good.'"

"Doing good!" repeated the druggist. "And he never took any credit to himself, either, for all he did. Why, when our first boy was born, the Old Doctor came in the night, without stopping to lace his shoes, and he scarcely left my wife for two nights and a day. When everything was over and she and the baby were both saved, he put his hand on her head and said, 'You can thank your God that you're alive, Nannie dear.' We did thank God; but we always knew that He and the Old Doctor were working pretty close together."

"Stella Hoffenberger says the other doctors, 'specially the younger ones, made a lot of fun of some of the things the Old Doc did, but I recollect that on *most* occasions the laugh wasn't on the Old Doc! Remember that appendicitis case up on the hill?"

"What was that, Jim?"

"A boy was took sick at one of the big houses up there. They wasn't folks that called the Old Doctor. They was newcomers, compared to most of us whose families have lived here for generations, and they wanted a young doctor with more up-to-date methods. Well, the boy was pretty sick, and the young doc wasn't real sure what was the matter, though he thought it was appendicitis. Finally, he called the Old Doc in consultation.

"'Yes,' says the Old Doc, after lookin' the boy over, and talkin' in that slow, funny way of his, 'Yes,' says he, 'it . . . *might* be appendicitis . . . and then, again, . . . it might *not*.' He didn't believe in cuttin' folks up till he was dead sure they had to be! 'Now, in cases like this,' says the Old Doc, 'with these symptoms, . . . when you can't be just . . . *sure* . . . I've usually found that a pretty good *guess* . . . is . . . typhoid fever. Better wait a little, and see.'

"'Wait, nothin'!' says the young doctor. 'This ain't typhoid fever. I'm sure of that! I'm goin' to telegraph to Johns Hopkins for Doctor Cullum to come right away, prepared to operate.'

"'Doctor Cullum is a great man,' says the Old Doc; 'he'll know.'

"Well, the great surgeon came. He give the kid one look, and says, 'This is the town where Doctor Unger lives. Why didn't you call him?'

"'I did,' says the young doc, as pert as you please, 'and he said he *guessed* it *might* be typhoid fever!'

"'Well, it is!' says the big doc, pickin' up his tools. 'Where's Doctor Unger's office? I've got a couple of hours before the next train goes, and I want to consult him about a case, myself.' And off he went to the Old Doc's office, and got so interested talkin' over that case of his and gettin' the Old Doc's advice on it that he missed his train and had to travel all night to get back to Baltimore."

The late Dr. David F. Unger, of Mercersburg, Pennsylvania

"YES," said the druggist, "I remember that time Doctor Cullum was here. They came into the store together to look up a prescription of the Old Doctor's, and Doctor Cullum told me that he'd learned more that afternoon from our country physician than he had in months from the big guns."

"Doctor Cullum said that?"

"Yes. He said that operation that Doctor Unger performed on the crippled girl away up on the mountain, with just the simple instruments he always carried in his bag, and with no light but one little oil lamp, was a great achievement. 'You folks don't appreciate what you've got up here in this town,' said he. 'Perhaps we don't appreciate him,' said I; 'but we sure do love him.'"

The druggist's voice broke on the last two words, and the silence that followed echoed his feeling more deeply than words could have done. After a time, the one called "Jim" voiced the thoughts of them all:

"I guess he was right. We didn't appreciate what we had in the Old Doc. Why, he could have been a great physician in a big city like Baltimore—if he

Digitized by Google

STATE UNIVERSITY SYSTEM OF FLORIDA

ıdn't stuck to us in this little town. I onder why he did."

"Perhaps it was for the same reason ıat he stayed a private soldier all through ıe Civil War. He told me once that he as offered a commission several times ıring those four years, but each time he fused it. 'They needed a lot more ldiers than they did officers,' he said, ıen to do the fighting. That's what I ent in for, and I guess I got more satis-ction out of it than I would have had wearing a shoulder strap and sitting ound in an officer's tent. Then, you see, went into the army with a company of ɔys from home; I hated to leave them.'"

Ah, that was it! He hated to leave them!" He ad loved the old comrades ıst as he had loved the eople of the little mountain ɔwn. And those people? Vell, the druggist had ɔoken for them,—"Per-aps we don't appreciate im, but we sure do love im."

From childhood, every ne of them had loved the ld Doctor, for many were ıe anxious days and nights ıat the good physician had ɔent in all of their homes, eeping watch with them as ıeir loved ones hovered on ıe brink of the eternal orld. Many a time at mid-ight he had come in the ouring rain, or started out ver the mountain in the ead of winter, through a ɔlinding snowstorm, to ring a new soul into the orld, or to stay the going f an older one. For more han fifty years Doctor Jnger was the physician nd friend of my mother's amily, so I share with these ɔeople of Mercersburg the leep affection for him. To ıim I owe my own life, and he life of my child.

"I'LL never forget the winter Father had pneu-nonia," said one of the men tanding in the drug store. 'We were still living out on he farm, and what a winter t was! The coldest I've ever known, with the snow piled higher han your head in some places. Father ıad been pretty sick with a bad cold for wo or three days. The Doctor had been ɔut once and said he'd come again the ıext day. Well, the next day we had the worst blizzard I've ever seen.

"Father grew steadily worse, and by ıight had a high temperature! Mother did what she could, watched him all night; but he was no better in the morning and there was no hope of getting the Doctor, for the drifts were so high from the barnyard to the road that no sleigh could be gotten through them, even if we could have got through on the main road. It seemed that we must let Father lie there and die!

"About noon, as I went out on the porch to see if there was any hope of getting a team through to the main road, I saw a dark object floundering around in the drifts of the big pasture, and making its way with great difficulty toward the house. Sometimes it would almost disappear in the drifts. I finally saw it was a man, and I set out to meet him, for he seemed pretty much exhausted. You all know who it was! The Old Doctor knew how sick Father might be, and he'd taken along old colored Chal and driven in the sleigh as far as they could go. Then he'd left Chal with the horse, and started on foot 'cross lots for the house. When I got to him he was about petered out. I almost carried him the last few yards to the house.

"After he got his breath, he didn't seem much the worse for the trip. He was so bundled up he wasn't cold. You all know how many clothes he always wore. Well, that morning he had on several extra layers, from head to toe, which was one reason he floundered so in the drifts. We helped him off with the upper layers and Mother wanted to get him some coffee; but, no, sir! 'No time for coffee now,' he said. 'Let's look after this man of yours.' After half an hour he sent me across lots to tell Chal to go on home without him and tell his wife he wouldn't be home till the next day.

"'THERE'S two other doctors in town,' he said, 'and nobody needs me as bad as Hayes does.'

"All day he worked and watched by Father's bedside and most of the night. About two o'clock, I persuaded him to lie down, promising to call him if there was the slightest change. He went to bed with all his clothes on—except his boots. He said when the change should come he wanted to be able to get to Father at once. I called him at five. I was sure Father was going. But he didn't, thanks to the Old Doctor! By daylight Father was sleeping naturally. The Doctor stayed until noon, and then I hitched up the old sleigh and succeeded in getting him through to town.

"After Father was able to sit up, the Doctor said to him one day, 'Hayes, you've lived on this farm all your life and you're over sixty years old. You've saved something, haven't you?'

"'Why, yes, Doc, enough to be comfortable on, I guess.'

"'Well, then, sell the damn farm and move to town! The next time you have pneumonia I may not be able to get through the drifts.'

"Father took his advice, and we moved to town in the spring!"

"THE Old Doctor wasn't averse to using pretty strong language when he thought the occasion demanded it," said the druggist. "Mrs. Unger told Nan that when the other doctors all decided to raise their fees, and called on the Old Doctor to persuade him to raise his, he told them to go to—well, to the hot place—that it was none of their business what fees he charged!

"'Folks around here can't afford to pay big prices for a doctor,' he said to his wife. 'If they'd all pay just what I ask, we'd get along fine.'

"'But they don't. Half of them don't pay you at all,' said his wife; 'and you won't ask them for it.'

"'Well, we've got along all right so far and raised most of the children. The boys will soon be able to look out for themselves, so I guess we'll continue to get along. Anyway, I won't raise my fees!' And he was as set about it as he was about wearing so many clothes in the winter time!"

"Speaking of the Old Doctor going to bed with his clothes on, I can go you one better, John," said the owner of a hardware store. "It was the time my wife's mother died. We knew she probably wouldn't live through the night, and Mary begged the Doctor to stay. Sometime after midnight we prevailed upon him to go to bed in the guest-room. He did—overcoat, cap, boots and all! He got under the covers and didn't even take off the pillow-shams!"

They all knew the story, but they laughed just the same, for the laugh, somehow, seemed to bring that beloved friend nearer. He would have laughed with them had he been there—and perhaps he was!

"Yes," said one, (*Continued on page 151*)

Why This Article Is Printed

SOME time ago, THE AMERICAN MAGAZINE conducted a contest on "The Best Loved Person I Ever Knew." Thousands of replies were received, and well-loved persons in all walks of life were mentioned. But the old-fashioned country doctor was named more frequently in the contest letters than was any other type of man. Hundreds after hundreds of letters paid tribute to him.

In the making of America, the old family doctor played a most glorious part. "He that is greatest among you shall be your servant," said Jesus. This divine test of greatness has been met by many a country doctor, whose services, at any of the twenty-four hours of the day, have been at the call of those who needed him most.

Usually, the field of THE AMERICAN MAGAZINE is contemporary life, and the printed articles are likely to be tied up with the activities of men and women who are living. Yet the Editor is constrained to make an exception in this instance, because, in printing Doctor Unger's story, the old-fashioned doctor as a type is given a small measure of the praise that is his due.

Sara Sherman, author of the article, was a patient of Doctor Unger, and the people mentioned in the article are real people, though in some instances the names have been changed. The incidents recorded are true. THE EDITOR.

War Drums

A stirring romance of the early American wilderness

By HERBERT RAVENEL SASS

Illustrated by Stockton Mulford

Synopsis of the Two Preceding Instalments

LACHLAN McDONALD—Scotchman, Frenchman, Indian, Prince of the Muskogee Empire; the Lady Jolie Stanwicke, imperious and lovely, lately come from England to her father's house in old Charles Town; Almayne, hunter, friend of Lachlan's father, commissioned by Jolie to search for Gilbert Barradell, her lover, lost in the New World; and Captain Lance Falcon of the brig "Good Fortune," swordsman, adventurer, with some strange hold upon Jolie's father: These are the colorful figures that move through this romantic story.

Lachlan saw Jolie first when he leaped her garden wall in response to a lady's cry of distress and the sudden sound of swords. It was Falcon he found there, standing with sword drawn over Gilbert Barradell's brother. Barradell was unhurt, and the lady sent Lachlan away. But he vowed that he would not go home to his father's kingdom until he had learned how he might serve this lady in distress.

The chance came quickly. He intercepted a note from Don Ruy Ortiz of St. Augustine, making an appointment with Falcon on the "Good Fortune" for twelve o'clock that night. Lachlan changed the hour in the note from 12 to 10, made himself up as a Spaniard, had his two Indian braves and Almayne row him out to the brig and met Falcon alone. He learned that Falcon was in league with the Spaniards against the English, that trouble was brewing among the Indians—and that Gilbert Barradell was Chief Concha's prisoner.

But at that moment the door of the cabin swung open upon the *real* Don Ruy Ortiz. Lachlan fought his way to the deck, and overboard, where he was rescued by Almayne and the braves, and the next day he reported to Jolie Stanwicke, in her garden, that her lover was alive. Even as he spoke, her eyes widened with horror, three Indians leaped upon him from behind, and he was carried through the streets of Charles Town in a bundle of masts and sails. When he awoke, he was on the "Good Fortune," and land nowhere in sight.

Lachlan knew that Falcon would kill him without a qualm. He took his only chance. He challenged the captain to a duel. The sportsman in Falcon was stirred, and he agreed. Then—a great cry! The brig was being pursued by Black Lowther, Falcon's deadly enemy, in "The Merry Amy." To escape destruction by the enemy vessel (both had run up their pirates' flags), Falcon wrecked the "Good Fortune," and Lachlan found himself washed up on shore with the captain and four of the crew as sole survivors. He learned that it was Falcon who had saved him from drowning, and agreed not to betray to anyone Falcon's piracy or his alliance with the Spaniards. As for the Lady Jolie—"I place no restriction upon you. I shall take care of myself there," Falcon concluded. And so they waited for rescue.

THE beach upon which Lachlan and Falcon had been cast lay not more than thirty miles down the coast from Charles Town. Scarcely a mile away opened Edisto Inlet, and at Lachlan's suggestion they walked the strand until the calm blue waters of the inlet halted them. In an hour or so they saw a large plantation pettiauger coming down the river to the inlet mouth to fish. They signaled the boat and she came to them.

While the gaping negro oarsmen looked on in wondering silence, Falcon told the white man in charge, a plantation overseer, a story of how the "Good Fortune" had been wrecked in the blow of the night before. There were food and drink on the pettiauger, and an hour's row up the inlet and the river behind it brought them to Mr. Paul Hamilton's plantation house. Hamilton received them hospitably, provided them with clothing, ordered his eight-oared cypress barge manned, and, holding the tiller himself, brought them through the winding, marsh-bordered inner waterways to Charles Town, which they reached about dusk.

He set them ashore and, being busy with his crops, cast off at once for the return trip. Lachlan stood watching as the black oarsmen pulled away, then turned to find Falcon's eyes fixed on him.

"You will not forget, sir," said Falcon slowly, "our conversation on the beach?"

"I shall remember it," Lachlan answered, "and certain other things."

They bowed stiffly and went separate ways.

They bound him to his seat with a bell rope cut from the wall

LACHLAN had slept during the long row through the placid, inland marsh creeks. He had intended finding Almayne immediately, but walked first to his lodging to get into a suit of his own clothes. In his room, irresistible weariness came upon him, the cumulative effect of physical and mental strain. He lay down on the bed for a ten-minutes rest, and slept for twelve hours.

It was near ten o'clock of the following morning,

efore, when he sat down Almayne at Marshall's rn and told as much of story as he was free to Almayne sat silent for moments, his lips ered under their thin e mustache, his long n fingers drumming on able.

By Zooks!" he exned. "An astonishing this Falcon!"

chlan nodded. "On rig," he said, "I would died for him. On the h, if I had had a pistol, ould have shot him n."

n that case," drawled ayne, "I am sorry you no pistol."

chlan pushed back his r. "We must move kly," he said, "for adell's rescue. I must olie Stanwicke at once."

f you see her you will nore fortunate than I e been," Almayne led.

What do you mean?" lan asked quickly.

That I am denied access er," the hunter aned, "that I am foren to see her or speak her. But I had best at the beginning. I a story to tell also."

TOLD it, briefly. Toward noon on Sunday had begun to wonder e Lachlan was. He ed for him at his lodgin the streets, at the e of Mr. O'Sullivan, lan's former tutor, at a abin outside the town's ndary which the two kogee warriors, Strik-Hawk and Little Mink, pied as a temporary ng. Then the hunter to the Stanwicke e. The negro servant, hom he announced his to speak with Mistress Stanwicke, returned few minutes to say that lady was ill and could be seen.

e fact that early in forenoon Falcon's brig weighed anchor and d out of the harbor ngthened a suspicion h had already taken in Almayne's mind. t Lachlan was on the seemed a remote possiy, but less remote than other theory which the er could devise.

ext morning Almayne e another attempt to Jolie Stanwicke. Her er, Edward Stanwicke, tanwicke Hall, met him at the door, ade any communication with Jolie, all but ordered him from the house.

Slowly, very slowly, as though the arm were made of lead, he raised his right hand and pointed. "Good God!" he whispered hoarsely. . . . The thing at which Stanwicke pointed was a huge, yellow, barred, and speckled spider, moving along the table straight toward the pallid, staring man

Almayne, in a fury at this insult, delivered himself of considerable strong language before realizing that in so doing he was making a mistake. In the afternoon came a summons requesting his presence at the Governor's Mansion. His Excellency looked him coldly up and down, informed him that complaint had been lodged against him by Mr. Edward Stanwicke, of Stanwicke Hall, and forbade him to approach the Stanwicke house or have any communication with its occupants.

Almayne had already considered laying the matter of Lachlan's disappearance before the Governor. He had decided against this, however, because he did not believe that anything could come of it. Seeing that Stanwicke had the Governor's ear, and knowing, too, that Falcon was well thought of by His Excellency, Almayne kept his troubles to himself and left the Governor's presence to seek out Striking Hawk and Little Mink.

They had learned nothing. Neither had Mr. O'Sullivan. Lachlan had vanished without a trace.

Monday afternoon passed and Monday night. On Tuesday morning Almayne saw a chaise draw up at the front door of the Stanwicke house. Immediately Jolie Stanwicke, her father, and a dark, thick-set man, the plantation overseer at Stanwicke Hall, entered it. They drove to a small boat landing on the western water-front of the town, where the plantation barge, manned by six negro oarsmen, awaited them. The hunter kept out of sight until they had embarked and then, as though by accident, walked out to the head of the wharf. The barge had cast off and the negroes were bending to the oars; but Jolie Stanwicke, seated at the stern, saw him and recognized him. Immediately she rose in her seat.

"WHY have you not answered my message?" she cried across the widening space of water. "Is he safe?"

"I got no message," Almayne shouted. "Tell me quickly, do you know aught of Lachlan McDonald?"

She uttered an exclamation of amazement, then shot a swift, angry glance at her father, who sat beside her, apparently dumb with surprise.

"He was set upon by three Indians in my garden," she cried, in a high, clear tone which carried far. "They—"

By now Stanwicke had recovered his wits. He spoke a quick word to the negro oarsmen, and at once their voices rose in unison, chanting the unintelligible words of one of those barbaric rowing songs with which the black boatmen of the coast plantations were accustomed to lighten their labors. The loud, melodious chime of their voices blotted out the voice of the girl. Almayne could hear no more of what she tried to tell him.

He saw her turn with a gesture of furious protest upon her father, who sat grim-faced and silent, staring straight ahead. The barge crossed the Ashley and entered the mouth of Wappoo Creek, evidently heading for Stanwicke Hall, Edward Stanwicke's country seat on Stono River.

"There's little more to tell," Almayne concluded. "I spent the rest of the day running in circles on a false scent, and I would have gone to the Governor this morning, much as I distrust him, had you not reappeared."

He rapped on the table for the black attendant and ordered more ale.

"Well, what next, lad?" he asked gruffly.

"Her message," said Lachlan, frowning thoughtfully. "She sent you a message which you did not receive—evidently a message telling you that I had been attacked in her garden."

"Aye," Almayne answered.

"Stanwicke suppressed that message, letting her think it had been delivered."

"Aye," said Almayne again; "so I figured it."

"He is Falcon's tool," Lachlan continued. "He is against her. And he is in Falcon's power—you remember Falcon told me that he held Stanwicke in the hollow of his hand. She will be in danger at Stanwicke Hall with those two men."

Almayne spread his hands in a gesture of irritation.

"That is not my business," he said impatiently. "My business is to get Gilbert Barradell and bring him back to Charles Town. Jock Pearson's pack train is start-

ıg for Fort Prince George. I shall ride ıith them to the fort, and then push on to hief Concha's town—it is best to take ıe upper route because the rivers to the outh are in flood. You'll be starting for alasé, no doubt, and since your road is ıe same as ours, you had best ride with s."

Lachlan nodded absently. "Good," e replied; "but there's work to be done ere first."

For some moments he was silent, frownıg and tapping on the table with his ngers.

"Does Pearson's wife still ride with the ack train?" he asked presently.

"Always," Almayne growled. "Ugly Meg is Jock's right-hand nan—she's better than nost women."

Lachlan smiled. "You ere always a hater of omen, Almayne," he aid, "which is unforunate, seeing that there ill be two women with s on this journey."

"Two women!" the unter exclaimed. "Meg earson, and who else?"

"Mistress Jolie Stanicke," Lachlan anwered.

Almayne's eyes idened with amazenent.

"Eh, lad, are you aft? In the first place, he would not come. In he second place, how o you propose to get er out of Stanwicke Iall? And in the third lace—"

"She will come," achlan interrupted. As for the other probem, we must find a vay."

"So!" said the hunter ryly, and shouted to he black boy to bring he ale.

EVEN to-day they tell some strange stories of Stanwicke Hall. There vas a Master of Stanwicke, it is said, who was noney-mad. His black laves and his servants nated him, for avarice nade him cruel; and beause of his passion for old, they called him behind his back the 'Golden Spider."

They got this name for him very natually. In all that country there was but one species of spider which spun a golden web. This one, a huge, hairy, barred and speckled golden creature as large as the palm of a man's hand, inhabited—and still inhabits—the forests of lowland Carolina, spinning its glistening webs in abundance in the garden and shrubbery of Stanwicke Hall.

They say that this money-mad Master of Stanwicke, this Golden Spider, as his people called him, learned not only of the name that had been given him but also of a grim prophecy spoken against him by an old African woman whom he owned; and although he had always loved those shining webs in the shrubbery of his garden, because they were the color of gold, he suddenly conceived a strange hatred of them and a consuming fear of the creature that made them.

And they say that one night he sat late drinking alone in the great room at Stanwicke Hall, and that in the morning his servants found him dead in his chair, his face upturned to the ceiling, and on the face, almost covering it from view, the gross and swollen palpitating body of a gigantic yellow and black spider. James Almayne, the hunter, and Lachlan McDonald, could give the truth of this tale, for there is a tincture of truth in it.

"It is my fault that you are wet and cold," Almayne said very humbly. "I did not think you would have courage to swim the river"

Dusk of the day on which they had conferred at Marshall's inn found Lachlan and Almayne in the deep woods about a mile from Stanwicke Hall. There they left their horses and a third horse, which they had led from Charles Town, and pushed on through the forest on foot. They wore buckskins and moccasins, and each carried, besides knife and steel tomahawk, a long rifle.

At the edge of the woods they waited until no more lanterns or torches moved about the plantation yard. Then they crossed the open stealthily, two dim, almost invisible shapes in the faint moonlight. Lights burned in the great central room on the first floor of the house. Presently Lachlan and Almayne stood in the deep shadow on the front piazza close to one of the lofty double doors opening into the room.

It was a large room, handsomely furnished, and lighted with tall candles, its wide, deep windows open to admit the sweet-scented April breeze. In a high-backed chair beside a long table sat Edward Stanwicke, a tall, stooped, gray man of some sixty years, whose craggy face would have been both handsome and strong but for the loose underlip.

He was richly dressed, as became his station in the Province; for the Master of Stanwicke, a nobleman by virtue of the system of Colonial nobility established by the Lords Proprietors of Carolina and not yet wholly obsolete, held himself second to none in the New World. In front of him, wearing white with a green silken shawl about her shoulders, stood Jolie Stanwicke, his daughter.

A LIVERIED negro servant had just placed a decanter and glasses upon the table, and had withdrawn.

Lachlan, watching from the darkness without, saw that Stanwicke sat in a strangely hunched position in his chair, his head lolling forward on his chest. For some moments he sat thus without moving, his eyes apparently half closed. Then he roused suddenly, and with shaking hands filled a glass. As he lifted it from the table, the lace of his sleeve brushed against the other glass, overturning it so that it smashed to atoms on the floor. Instantly he broke out in a high-pitched, tremulous wail.

"See," he cried, his voice as shrill as a woman's, "see what all this has done to me. I am a wreck, a shell. I cannot pour wine for the shaking of my hands. And you stand there and there's no pity in you."

The girl moved a step nearer, resting her hand upon the table.

"Pity!" she said slowly. "There is no room for pity." (*Continued on page 134*)

"Adventure, Here I Am; Come A-Shootin'!"

Paul Christian Miller arrived in Wyoming thirty-one years ago with a gripsack, a rusty six-shooter, and an overwhelming desire to bust a bronco—He found adventure, sure enough, but in a field of which he had never dreamed

By Neil M. Clark

OFF the Westbound Overland Limited, at Laramie, one day in 1896, stepped a lanky youth whose luggage consisted of two Old World gripsacks. A joyous sensation came to him as he took the first tonic breath of high-country air into his lungs. He knew neither the language of the country nor the vernacular of the West; but the thought in his mind, had he known just how to phrase it, was:

"Adventure, here I am; come a-shootin'!"

Nineteen years old he was, tall, lean, brown-haired, brown-eyed, with an anchor tattooed on one wrist and a tall frigate on the other. Not within five thousand miles did he know a soul he could call friend. The combined steamer and railroad ticket which had brought him to his destination, read, "Copenhagen, Denmark, to Laramie, Wyoming, U. S. A." In his pocket were a few dollars—only a few. In one gripsack was a rusty six-shooter. In his heart was a great yearning to see and to be a part of the frontier and of life at the untamed outposts of civilization.

In this fashion, thirty-one years ago, Paul Christian Miller came to America. And what the future held for this adventure-seeker was strange indeed. To-day, you can ask scientists, even in far countries and remote universities, about Paul Miller, and they will tell you he is one of the foremost experts of the world in collecting and preparing for study or exhibition the fossil bones of rare old animals that lived on this earth hundreds of thousands and millions of years ago.

Officially, he is associate curator of the Walker Museum of the University of Chicago—a paleontologist whose researches and expeditions have taken him each year for twenty-eight years into the wildest and most difficult parts of this country. His expeditions have led to the discovery of ancient animals never before known to exist, and have helped to etch new details in the marvelously-revealed story of life as it existed twenty-five and thirty million years ago. Mr. Miller has specialized particularly on animals that lived in what geologists know as the *Permian* period of the earth's history, and his collections of animals of that period are unsurpassed.

Such is the man who was a lad and a stranger on the station platform at Laramie in 1896—a lad with scant schooling for science, and with no word of English on his lips. It seems a far cry from lad to man; but the selfsame magnet that drew Paul Miller to Laramie drew him also into science. An adventurer he was then, and an adventurer he is still!

"As a boy," he told me, "I was in the grip of the wanderlust, and roamed far and wide, thinking that adventure lay only in dropping below strange horizons. The spirit of those times never has left me, and to-day I believe even more surely that adventure lies in dropping below horizons and learning what lies beyond. But the years have taught me something else as well: that the horizons hiding some of the finest adventures are not necessarily those seen by the eye, for there are also horizons of the mind. Adventure, in a word, is where interest is—where curiosity, eager and enthusiastic, leads on to new knowledge, new experience, and to new achievement."

BEARDED, slightly bald, his skin leathery-brown from exposure to wind and sun, Mr. Miller may be found during any of the winter months, as a rule, in his office or workroom at the University of Chicago. His fifty years have been full years, and frequently his talk is spiced with reminders of the sailor, the cowboy, the miner, the railroader—for he has been all of these things, and more.

His father was a master of deep-sea sailing crafts in the days when steamers were rare and to ship on one was considered a disgrace. Sailing ships' decks were as naturally Paul Miller's play places as are the backs of horses for ranch boys. Before he learned his A B C's, he knew the name of every stick and sheet on a vessel. Before he was five he had climbed the masts of the tallest sailing ships that came to Copenhagen harbor. And, like any other boy of his land, he learned how to sail a vessel himself, and understood the freaks of tide and storm in the land-locked waters. To dream, day and night, of becoming a sailor, was as natural for him as to breathe.

"But the sea claims many victims," he reminded me. "More than one of our neighbors and friends sailed away never to return. So, when my father was absent on long voyages, as he sometimes was for months at a time, my mother was perpetually worried about him, and when he was at home, she besought him to quit the sea. He finally did, taking up a small farm. Mother also tried to dissuade me and my brothers from thinking of the sea; but that was like asking the wind not to blow!

"At sixteen I went to sea, signing on in a training ship, which, though officered by mature men, and engaged in regular commerce, was worked entirely by a crew of thirty or forty boys, all aiming, like myself, to become ships' officers. On this vessel I covered many a thousand miles, sailing to the West Indies, to South America, to Africa, through the Suez and down the Red Sea, to Russia, and other parts of the world.

"By the end of two years, however, my mother brought so much pressure to bear on me, that I consented to quit the sea, at least for the time being, and to try a job with my uncle, who raised flowers for the Copenhagen market. Long before my first year with him was up, I knew I would have to get away: the call of far places was too strong.

"It was with the understanding that I was to adventure as I pleased for two or three years, and then come home and settle down, that I bought a ticket from Copenhagen straight through to Laramie, Wyoming. I had pored over the maps, and Wyoming looked as near the edge of things as any place I could see."

In a Laramie restaurant he met a man who spoke his language, and who helped him to get his first job, which was in the Union Pacific roundhouse. His task was to crawl under locomotives when they came in from runs and clean out the ashes in the boiler pits.

"ONE week of that was enough," he laughed. "I had not come to Wyoming to look at the under side of locomotives, but to see mountains, to get astride a horse and ride into the wind." So, again through his friend of the restaurant, young Miller secured an introduction to the foreman of a ranch located some thirty or forty miles out on the Laramie River, and from him he got a ranch job. This young Dane wanted to be a cowboy and ride the range.

"Leading me out to the big barn," Mr. Miller related, "the ranch foreman pointed to a two-wheeled cart, to which was hitched a big-boned horse that apparently had not moved at faster than a trot for years. Near by was a huge pile of refuse waiting to be hauled away.

"'There,' said the foreman in bad Danish, 'is your job.'

"For the next two weeks," Paul Miller added with a smile, "I hauled refuse from

STATE UNIVERSITY SYSTEM OF FLORIDA

k of the stables, and dumped it in the :r." He couldn't see much more enture in this than in cleaning boiler ; but, hoping that as soon as he had shed the task he would be allowed to ome a rider, he endured it. No sooner the refuse disposed of, however, than foreman made him take the same se and cart and pick up all the stones could find in the hay meadow, to save mowing-machine knives from injury haying time. At last, however, he did his chance to ride.

"HERE were boys on the ranch," he went on, "who rode broncos that ked, and thought nothing more of it n eating flapjacks for breakfast. But y were born to the range, while for me orse was an entirely new kind of con-ance. The horses themselves, and the er riders, made the most of the fact.

"I first got my hand in at a horse nd-up. This ranch owned several hdred horses of the Circle-S brand, and eral thousand cattle, branded dia-nd-circle; they all ran together on free ge covering dozens of square miles of intry. The colts needed branding, and as told off as a member of the round-up w. There were seven or eight of us ogether, and a *caviya* of nearly a hdred horse, nine or ten being allotted each rider. The foreman nted out mine:

"'That black there, the n, the pinto—'

"As long as he was point-, I could identify them. t they immediately milled th the caviya and were all t horses. You can guess at I provided plenty of usement for the round-up nds."

Try as he would, Miller uld not rope a horse for nself. When somebody e caught one for him, he uld not stay on its back if bucked—and the "boys" w to it that it did buck. nd when the foreman, out patience with delays, final-told them to catch him horse whose bucking days ere over, he quickly learned at for him there were worse ings than falling off a orse—and that one was having to stay oard!

"In addition to being a tenderfoot," Mr. Miller went on, "I was not properly utfitted. The others had the comfortable nd necessary high-heeled boots; I wore rdinary shoes. They had chaps, which rotected their legs when riding through iff brush; I had only overalls. They had omfortable saddles of their own; mine as one that nobody else cared to use. ly legs quickly became so badly blistered nat the pain by night was fearful; and, hen I was routed out of the blankets at our in the morning to climb into the addle again, nearly unendurable. There ere times for some days when I felt that I ever got back to ranch headquarters live, I would cheerfully hitch up the old lug and drive him to the two-wheeled art the rest of my days!"

But the tenderfoot's sores gradually ealed. His muscles toughened. And there came a day when, with his first two months' pay—sixty dollars—he rode to town and bought himself a saddle of his own, chaps, boots, and the balance of a complete outfit. Soon he was no longer the newest tenderfoot, but almost a veteran, and in the end he could ride nearly as far and hard, throw a rope nearly as well, and handle a branding iron about as cleverly as any man to the range born.

No one place or job held Paul Miller for long in the years immediately following. When he grew tired of the scenery or grub in one place, he rode on to another. New jobs, new faces, and new chances of adventure, always were waiting somewhere just ahead. Those were the days when a man could ride from the Uinta Mountains to the Montana line, and scarcely see a line fence. Miller rode and worked pretty much through Wyoming, Montana, Colorado, Utah, and Arizona. He drove mules and handled a wheelbarrow in mines in Utah. He worked as a fireman on the Union Pacific. And once, being in Omaha with a trainload of cattle, he picked up two weeks' wages running a stationary steam engine for a merry-go-round.

Dr. Paul C. Miller, of the University of Chicago, known all over the world for his researches in the fossil remains of prehistoric animal life. Doctor Miller came to this country thirty-one years ago from Denmark. He is fifty years old. (In oval) Doctor Miller, in Wyoming, excavating the skull of a titanotherium, one of a family of gigantic extinct animals somewhat allied to the rhinoceros

NEARLY three years slipped by, during which Miller was never idle. And always he was doing the things that interested him most at the time, and doing them hard. To him that was adventure, as it still is. But too, in his mind there was dawning a new understanding.

"I discovered," he said, "that a mode of life, to be permanently interesting, permanently adventurous, must be directed by some proper aim, purpose, or ideal—I do not care what you call it. I was now twenty-two, and had pretty well learned my way about the West. I became conscious of the need for some steady guide rope to help me walk the deck of life.

"I never thought seriously of going back to Denmark—it all seemed far too tame there—but I did think some of heading toward ranch ownership. But chance, or fate, or whatever it is that arranges such matters, led me one day to the railroad station at Como, Wyoming, and there I met the late Dr. Jacob L. Wortman, of New York City.

Doctor Wortman, working along the same general lines in science as Professor Henry Fairfield Osborn, president of the American (*Continued on page 163*)

Arthur G. Gower, of Greenville, South Carolina, is a familiar and eagerly welcomed visitor in the hospitals and sick-rooms of his city. For many years he has been distributing flowers of his own growing to sick persons, and others in distress. Mr. Gower makes his living as a bookkeeper. He is sixty-six years old

INTERESTING PEOPLE

This Quiet Bookkeeper Has Given Away 100,000 Bunches of Flowers

ARTHUR G. GOWER is perhaps the most amazing man I know, for he has been able to cling, for twenty years, to a good resolution. And it is the kind of resolution that causes him endless hours of work and that has never yet paid him one dollar. Moreover, this generous resolution of his requires him to get up at four o'clock each Sunday morning—the very morning that most of us lie late abed—and tote heavy loads here and there over town. More than that, his self-given task calls for work well into the night.

Mr. Gower is a bookkeeper, but I am not going to tell you about that phase of his life. There are plenty of bookkeepers, and you know already what they do. But there is only one bookkeeper, so far as my acquaintance extends, who has given away a hundred thousand bunches of flowers, all of his own growing. All of us have generous impulses, and all of us live up to them now and then; but Mr. Gower, once started on his great mission, has never weakened. Into the three main hospitals of Greenville, South Carolina, he goes every Sunday morning, carrying two big baskets of flowers, arranged in convenient bunches; and into homes where there are invalids, or persons temporarily sick, he also goes. His coming is like a benediction; his gifts brighten the day for the bedridden men, women, and children of Greenville. This remarkable manifestation of a Christian heart started twenty years ago. A man and his wife came to Greenville from the North, and the woman was an invalid. Mr. Gower went to see them, and carried some flowers.

"She was a stranger here," he explains, "and could see nothing from her bed but the tops of trees out of her windows. The few flowers I took to her seemed to brighten her days. I saw an expression of radiance come into her face once when I presented my nosegay. That started me thinking, 'Why not give flowers to others, also?' I asked myself."

Mr. Gower found no satisfactory answer to that question except to go ahead and act upon the impulse. He began to make mental notes of his friends who were sick, and from time to time he gathered bouquets from his own garden and took the flowers to these friends. They appreciated his thoughtfulness; the sight of the flowers seemed to make it easier for them to be patient while awaiting recovery. Then he extended his visits to include strangers, and also he extended his flower garden. As he enlarged it, he also enlarged the circle of his visits. The work of kindness had started, and it gathered momentum as it went along.

That was the start of Mr. Gower's flower mission. He acted on the impulse of his heart, and, what's a whole lot more, he never tired of obeying that impulse. In making his plans, he decided that to visit the patients in the hospitals, giving them flowers, was an obvious thing to do. To these he added various sick persons about town. For many years he has distributed his bouquets impartially to all who are sick or otherwise afflicted.

As regularly as Sunday morning rolls around, this quiet, unassuming bookkeeper, now sixty-six years old, visits three hospitals and many homes, with his hamper baskets, one on each arm, piled high with flowers. His visits are eagerly looked forward to; people expect him, as they do the rising sun, and they accept him as one of God's benefits to humanity.

Mr. Gower is a busy man, putting in forty-eight hours a week over his ledgers, so he does not have much time for his really wonderful garden. He is not a man of means. He walks to and from the hospitals and the homes he visits, walks despite the weight of hundreds of bunches of flowers. His own home has half an acre of ground around it, and in every available space flowers are planted. He selects them so that there will always be blossoms, except for a few weeks in the dead of winter. Each afternoon, upon returning from his office, he stays with his flowers as long as he can see to work. He never knocks off until the bats have hung themselves up for the night, and until the last hawk-moth has given the primroses a final once-over. And the next morning, long before sunrise, he is with his flowers again.

About four o'clock each Saturday afternoon Mr. Gower begins cutting the flowers he will distribute next day. When dark comes he goes into his house and arranges them into bunches. At four o'clock on Sunday morning he gets up again and completes this part of his task of mercy. Then, as soon as other people are stirring, he sets out on his rounds, carrying, usually, from one hundred to one hundred and fifty bunches of flowers. The largest number he ever distributed in one day was three hundred and eighteen. That was when the World War was on, and a big base hospital made extraordinary demands upon him. It is estimated that some fifteen thousand soldiers passed through this hospital, first and last, and that every one of them at one time or another received flowers from this bookkeeper, whose creed is as wide as mankind. In good weather and in bad, he goes just the same.

Mr. Gower has been an officer in the First Presbyterian Church of Greenville for thirty-five years. During the war, as a side line, he taught a Bible class in the government hospital. For more than twelve years he has taken flowers, one day each week, to Miss Nettie Trapp, a helpless invalid. "Mr. Gower's visits and his flowers," she told me when I called recently to see her, "have done more than anything else to keep me cheerful." She is blind and a paralytic.

Frequently in the mails Mr. Gower receives letters from strangers he has visited and, of course, from friends. Others have sought him out personally and thanked him; one man explained that he had been waiting three years for a chance to return again to Greenville and meet Mr. Gower, to thank him personally for his kindness; an ex-soldier wrote to ask if "you are still scattering sunshine?" and one day, as the flower missionary was walking along a street he saw a buggy come suddenly to a halt, an old man alight from it and come running toward him as fast as his age would permit.

"I've been wanting a chance to thank ou!" exclaimed the old man. "Those owers meant a lot to me when I was own."

Flowers grow for Mr. Gower better than they will for me, or for anyone else I know of. They seem to know that he, more than the rest of us, realizes what they are for. God's gift, they are, to all of us. But there are some who cannot grow them because of physical infirmities, and Mr. Gower is the ambassador extraordinary between these unfortunate persons and the world of fragrant beauty.

CHARLES A. DAVID

Santa Claus Couldn't Get Along Without Rogers

MORE than five hundred children in Columbia and Boone County, Missouri, are made happy at Christmas because a Columbia man, O. R. Rogers, decided to open a repair shop for Santa Claus. Mr. Rogers spends every spare moment in his workshop repairing truckloads of toys contributed by Columbia housewives to help fill the Christmas stockings of poor children who might otherwise be overlooked.

In October, 1925, Mr. Rogers started Christmas shopping for his own children. He found toys expensive, and out of reach for families of limited means. Then the thought of the annual waste of toys that were discarded occurred to him. Out of this grew the idea of a campaign for discarded toys that could be repaired and distributed. In response to an advertisement in the local papers, hundreds of toys were donated. With the help of his wife and mother, Rogers repaired and distributed everything that came in.

Before another Christmas rolled around, an organization had been perfected, business firms and charity organizations lending their assistance in every way possible. As a result, a toy shop that was a veritable Toy Land worthy of Santa Claus himself was in active operation.

I visited the Toy Shop while the Christmas preparations were in full swing, for it was only a few weeks before Santa Claus was scheduled to appear in Columbia and Boone County. Imagine, if you can, thousands of toys: books of every description, dolls, large and small, velocipedes, rocking horses, wagons, doll houses, furniture, dishes, Teddy bears, Noah's arks, tops, and the what-not of the toy world.

Glance particularly at the miscellaneous collection of dolls: there are baby dolls, character dolls, mechanical dolls, and dolls that cannot be classified. Some are bereft of arms, others of legs, or eyes, or hair. Yet by the time Mr. Rogers has set new eyes in plaster of Paris (and they open and shut perfectly too), restored arms or legs, and youth to the joints by inserting new elastic, given each doll a new head of hair, and a coat of flesh-colored paint, they are ready for the finishing touches. These are given by the students of the Art Institute, where delicate retracing of eyebrows and lashes, and a rosy tint to skin and cheeks remove the last traces of made-over dollies. When they have been dressed by the women members of the Columbia Sunday-schools, the dolls are all that any little girl-mother could desire.

Now glance over the miscellaneous assortment of mechanical toys. Mr. Rogers is really a wizard when it comes to this kind of work. The "innards" of kicking mules which have ceased to kick display their original mechanical enthusiasm for kicking when they have had a thorough working-over at his hands. The same is true of other toys. Regardless of what ails them, Mr. Rogers makes the wheels go round as perfectly as on the day they emerged from the toy factory. No pains are spared to make each toy as gay with paint as when it first left the shop. Sleds, scooters, cars, and trains, resplendent in their new colors, gladden the hearts of hundreds of children who otherwise could not possess them.

O. R. Rogers of Columbia and Boone County, Missouri, runs a repair shop for Santa Claus. Mr. Rogers, aided and abetted by practically everybody in his community, collects broken and run-down toys, makes them over as good as new, and sees that they find their way at Christmas time into little stockings that might otherwise go empty. In the picture you see Mr. Rogers and his family

The distribution of the toys presents no problem at all. The secretary of the local Public Welfare Society makes out a list of children and selects toys which she personally knows are wanted. Where there are several children in one family, an assortment is made, so that no two receive the same kind of toy. After the needs of the charity organizations have been taken care of, the rural school teachers select toys for the Christmas tree that is trimmed in each schoolhouse. Mr. Rogers is determined that no child in Boone County shall be overlooked.

Because this toy project carries the heart appeal of children, everyone contributes generously. Mechanics swallow their lunch hurriedly, rush over to the Toy Shop and work for the remainder of their lunch hour. Hardware stores donate paint, nails, wire, screws, and other necessities. Paint companies furnish paint for automobiles and wagons, so that toy vehicles vie with full-sized ones in beauty of finish. Left-over toys are donated by stores carrying toys in stock. Boy Scouts, under the active supervision of their commissioner, collect the toys, help to classify them, and work every spare moment outside of school hours repairing or painting.

Mr. Rogers gets a world of pleasure out of this work. But he stubbornly disclaims any credit for the success of the project. He insists that, while the idea is his, the success of the project depends upon the generous coöperation and enthusiasm that has been shown by the entire city and county. This is what he says: "No single individual deserves the credit for this work. There are hundreds of persons who have helped to make it a success. The people who donate the toys, the women who dress the dolls and distribute the toys, the newspapers that have sold the idea to the public, the Boy Scouts, the Camp Fire Girls, and hundreds of others too numerous to mention—all are equally deserving of credit.

"See that rocking-horse over there? Well, when he came in the other day he had no tail. I telephoned to a farmer friend of mine, told him about my dapple gray that had no tail, and he responded with, 'Oh, don't let that worry you, Rogers, I'll cut some of the tail off of one of my horses or cows and bring it to you to-morrow.' And he did, too!

"See those little cars? Yes, they need wheels. Well, I mentioned that to a cabinet-maker friend of mine, and I am sure those wheels will be soon made.

"With everyone interested in this Toy Shop and all that it represents, I

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

see no reason why this work should not grow into a great activity, not in this county alone, but in other towns and cities. Think of the thousands and thousands of children in our large cities who now have nothing but an empty stocking on Christmas morning and a shattered faith in 'Santa Claus' for their Christmas gift! And think how happy these youngsters could be made if some group of persons would adopt our plan of collecting and repairing toys that would be donated by wealthy families, large department stores, and come from other sources."

MARIE ROGERS-JOHNSON

These Girls Are Not Afraid of Rats and Mice

MISS HELEN CALDWELL and Miss Evelyn Wagar wanted to see the world—so they became rat and mice exterminators. The Pied Piper of Hamelin Town was not more earnest nor more thorough in his work than are these two college-bred young women. Their method, however, differs widely from his. They do not employ strains of music in their process of doing away with the expensive rat; instead, they depend upon the successful government formula, barium carbonate, which is an effective poison.

These young women travel by automobile and they have been in nearly all of the states of our country and several of its possessions. When they arrive in a city their first step is to seek the coöperation of the health officers, who are always glad to lend their assistance. In some towns the mayor proclaims a rat-killing week, and frequently the chamber of commerce sponsors a campaign, or a drive will be conducted under the auspices of clubs, the Rotary, or a woman's civic organization. Often the young exterminators give merchants and owners of buildings and factories a demonstration of their methods.

The charge for ridding premises of rats and mice is based on the size of the building and the probable size of the rat population. After the rats have been destroyed, instruction is given in the proper use of the poison, in order that owners may continue to keep their premises free from the rodents.

Miss Caldwell is from Huntington, West Virginia. She began this work five years ago, just after her graduation from college, in company with Miss Anna Mae Wright of the same state. The partnership lasted until a few months ago when it was dissolved by the marriage of Miss Wright, whose place was taken by Miss Evelyn Wagar, a graduate of the University of Minnesota.

"When we began," said Miss Caldwell, "we had no idea that we would continue so long, nor that the business would develop as it has. We really got started during a state-wide campaign against rats in Virginia. A relative of Miss Wright's was health officer in Norfolk, and he helped us at first. We wanted to travel, and we thought the business offered an opportunity to obtain funds to cover our expenses. We knew that there were rats everywhere. It was only a question of choosing where we wanted to go.

"We first toured the Southern states. Our efforts at rat eradication were so well received that we began to receive calls from far-away places to organize clean-up campaigns. Since we started we have carried on our work of extermination in thirty-nine states, two provinces in Canada, in Hawaii, Alaska, and in several border towns of Mexico.

"We have had a lot of play and sight-seeing mixed in with our work. As we travel in our own automobile we are able to visit all the points of interest in the cities and country 'round about. In this way, you see, we are carrying on the business of acquiring an education.

"Frequently we are asked to speak before clubs and other organizations, and we have given radio talks on the subject of rat-killing. The advantage of concerted action against the rodents is obvious, for unless the adjoining premises are rid of the pests, individual warfare is useless. Because we get the whole community working at once to get rid of the dangerous rat, city authorities welcome our work. In only two or three instances have towns refused our services.

"It is a popular supposition that women are afraid of rats and mice," continued Miss Caldwell, "and surprise is often expressed that two girls should undertake this sort of thing. Rats hold no terrors for us. Indeed, we thoroughly enjoy fighting them, for we feel that in helping communities get rid of rodents we are doing a real service.

"The United States Public Health Service places the number of rats in this country as twice that of the human population, and statistics on the subject show that it costs on the average $1.82 annually to feed each rat. Not only is the rat destructive, but the United States considers him an undesirable citizen from another point of view: the rodents that infest the wharves of seaports may harbor the flea that carries the germ of the deadly bubonic plague. We carry an endorsement of our work from the United States Public Health Service, and we use the poison recommended by the Government."

Armed with a government formula for poison, and a college diploma, Helen Caldwell, of Huntington, West Virginia, set out five years ago to see the world by the exterminator route. Miss Caldwell and her partner, Miss Evelyn Wagar, have rid communities of rats and mice in thirty-nine states, not to mention Mexico, Alaska, and Canada. They travel in their own car, make a good living, and have a jolly good time

Miss Caldwell tells of a number of amusing incidents connected with their travels. While in Juneau, Alaska, they followed in the wake of an investigation by Federal prohibition officers. The girls were thought to be government detectives looking for moist spots in the territory. Their rat-killing was looked upon as a camouflage for the more serious business of hunting violators of the prohibition law.

"I see no reason," concluded Miss Caldwell, "why other girls should not adopt this means of combining work and play and education, and I seriously recommend it to the attention of those who wish to travel.

"Of course rat chasing is not quite so thrilling a job now as it was in the old days when certain kings had official rat catchers duly appointed. These dignitaries wore scarlet coats, on which were embroidered figures of rats and mice destroying wheat sheaves. Almost anything else would have served equally as well as a symbol of the destructiveness of rodents, for they seem to have a keen appetite for everything, from old leather harness to boarding-house roast!

"Not many folks realize how fast rats multiply. It has been estimated that a single pair of rats living in moderate circumstances can be responsible for the arrival of 650,000 rodents in three years. You can readily see that exterminators will be needed as long as there is one family left. So there's plenty of room in the profession for any girl who doesn't have to shriek and jump when she sees a rat."

HARRIET OSBORN

Five Years Ago He Tried to Give Away Half His Business

(*Continued from page 43*)

o demand luxuries! He fired furnaces for is board. And on Saturdays now and hen he picked up a few dollars with his hules, which, the balance of the time, he oaned to the local delivery man in xchange for their keep.

The Pryor Institute was a private chool supported by the Southern Metho- ist Episcopal Church. In two years ere, although he was not yet ready for ollege, he was far enough along to enter he preparatory department of Tennessee Vesleyan College, at Athens.

The mules, long his friends in need, vere sold. And when, at twenty-two, he tepped on his first college campus as a tudent, albeit only in the preparatory epartment, he had exactly sixty-five ollars in his pocket, and no reserve.

"Naturally," he said, "I did not foresee ll the obstacles I would have to over- ome; but I did know I would have to ork hard and practice strict self-denial. here were others at Athens in much the ame boat, so eight or ten of us rented two ttle cottages and bached for two years. ur expenses during that time averaged ss than a dollar a week apiece. Ob- iously we did not have much to eat.

"But I cannot recommend to others conomies such as we practiced, for I early ruined my health for good. I had een husky, but I became anemic through nder-nourishment, and at one time began o wonder if I would ever be wholly well gain."

DURING the summer, Burnette earned in various ways the money to keep im at school through the ensuing winter, sually in some kind of church work, nce the ministry was his immediate oal. The first summer, for instance, he as employed at a logging camp in the reat Smokies, where he conducted unday-school services and did what issionary work he could among the men. hey were a rough lot, living in freight ars and bunk shacks, where fleas in e beds were a minor discomfort; but urnette lived as roughly as they, and emonstrated that he could make good in ch service and among such men. For at summer's work, Burnette was paid ghty-five dollars.

Three years Burnette remained at thens, preparing for the university; in is twenty-fourth year he entered the niversity of Chattanooga as a freshman.

At Athens, he had met a young woman ho had promised to become his wife. etween his freshman and sophomore ears they were married. And this is how, nancially, they managed it: Burnette btained a pulpit in Chattanooga. A arsonage was furnished, hence there was o rent to pay. In addition, he received a lary of seven hundred and fifty dollars. n this fashion—almost in luxury—he ent the next three years, doing full-time ork at the University, and giving full me to his church.

He was graduated in 1916. But not yet was his schooling ended. That fall he moved his family, which now included a daughter, to Chicago, where he entered the Garrett Theological Seminary. Here at the very outset he met a disappointment which may have been a turning point in his career.

"Before I left Chattanooga," he explained, "I had been virtually promised a certain church in Chicago. I had no money to speak of—perhaps a hundred dollars—and a church salary was necessary to keep us going while I was finishing my studies. When I reached Chicago, I was instructed to preach my first sermon, not at the church which I supposed would be mine but at another.

"There was a reason for this, of course. I was on trial. And in the congregation was a prominent layman from the other church, who was to report on me.

"I remember how I felt as I mounted the pulpit that day. I was a stranger in a strange land. Among cultured people anywhere I still felt keenly the limitations of my bringing-up. In the South, however, I at least was familiar with the conditions of life of a majority of the people; while in the North perhaps things were different.

"I did the best that I could; but I did not get the pastorate."

However, Burnette obtained another church that paid him five hundred dollars yearly. With this, plus what he was able to borrow, he supported his family.

He completed the three-year theological course in two years, and immediately was assigned a church in Detroit, from many points of view an excellent appointment. The salary was eighteen hundred dollars a year, the staff fairly large: two deaconesses were employed on full time and five physicians contributed part time to a clinic which the church maintained.

ONE year he remained here, until he reached the decision which altered the course of his whole life. A mixture of motives guided him. Chiefly, he was influenced by a desire to find the sphere of largest usefulness for his particular abilities. He had already begun to dream of the possibility of a ministry of practical life. More and more it seemed to him that this was the field in which he could accomplish most and be happiest.

"There still were debts," he explained. "I owed the money I had borrowed in Chicago. Of course I could have repaid that in time from my salary. However, a minister in a large city does not save a great deal, even on one hundred and fifty dollars a month, and that, with other reasons, led me to take rank for a couple of years as a supernumerary, while I tried selling, paid my debts, and possibly put something aside for the future. Incidentally, I wanted to know at first hand what the business world was like.

"I started selling. And I never went back to the pulpit."

"You never *wished* to go back?"

He shook his head. "No," he said, with quiet conviction, "I felt that I had found my true niche in life outside the ministry."

The obstacles and handicaps which Burnette had overcome up to this time were really rather simple, compared with those he now faced.

"I had planned to sell real estate," Burnette said. "An acquaintance, however, was selling aluminum utensils. He induced me to try the same thing."

From the pulpit, to ringing doorbells! A curious step, surely, for a man trained as he was. But it was useful work, undertaken with purpose and conviction, and one key to his immediate success as a house-to-house canvasser may unquestionably be found in an address delivered a number of years later.

"I am encouraged," he said then, "by the fact that when Henry Ford was my age he was working as a mechanic for one hundred and twenty-five dollars a month. If a man is getting ready for bigger things, it really doesn't make much difference what he is doing to-day."

NOW, to appreciate what came after, bear in mind that it was only seven years ago—1920, to be exact—when Burnette began selling pots and pans. Into the succeeding seven years he condensed enough activity, hardship, and achievement for several ordinary lifetimes.

"Within six months," he told me, "I had finished paying off my debts, bought a small automobile, and had eight hundred dollars in the savings bank."

This was not luck—unless it was luck that he stayed out and worked at his job steadily in all kinds of weather, even when the temperature was fifteen and twenty degrees below zero, and his ears frostbitten so badly that they looked like cauliflowers!

With this much money ahead, and still being an innocent in business, he next made an unprofitable move. He went into the grain business with his brother, a Kansas farmer. The partnership lasted only a few months. Speaking of it, Burnette said:

"I came back to Detroit so completely broke that my wife had to take the children to her mother's for a few months, until I could get on my feet again. I went back to selling aluminum, but I soon received a new offer.

"A couple of well-to-do young men, brothers, had organized a curiously heterogenous business in Detroit. Under a single corporation they were running a coal yard, a foundry, and several other ventures. They were not very good business men, and as times happened to be bad, they were making no money and, in fact, were headed toward bankruptcy.

"One brother happened to see a cast-aluminum teakettle advertised in a magazine. Being in the cast-iron foundry business, it caught his eye.

Digitized by Google
Original from
STATE UNIVERSITY SYSTEM OF FLORIDA

"'Why,' he asked his general manager, 'couldn't *we* make a line like that?'

"The general manager knew nothing about aluminum, but said he had a friend in that line whom he would consult. As it happened, this general manager had been superintendent of the Sunday-school in my church, and I was the friend.

"THE upshot was that I investigated the matter pretty thoroughly for them. Food always had seemed important to me, ever since I had had such a time getting all I wanted to eat in school, so I was intrigued by facts I learned—such as that aluminum is an excellent conductor of heat, and with a cooking pan of cast-aluminum several times the thickness of the usual pot or pan, it was possible to cook vegetables, say, without water. That appealed to me, for I had always considered it a sinful waste to drain nourishing food matter down the kitchen sink. In this and related facts, I thought I saw a useful and significant opportunity. So, under my directions, patterns for a number of different kinds of utensils were made, and I was offered the position of sales manager to put them on the market.

"The brothers asked what the salary arrangement would be, and I replied by asking what they considered fair. Four hundred dollars a month, and a commission of five per cent on all sales, was suggested. I was satisfied with that.

"In black and white, they figured out for me just what I would earn if we sold, say, fifty thousand dollars' worth of utensils. I said nothing. However, I had it in mind then, as I ever have had it, that a *little* try means a little result, a small goal a small achievement.

"Our first utensils were rather crude, but I hired a few men hopefully, and, because the times were hard and many men were out of work, I got some good ones. I scattered them in various places in Detroit and the surrounding territory. Day after day they reported no sales, or very small ones. One man, I remember, was working in a small city near by.

"'I can't sell your stuff, Mr. Burnette,' said he one evening, 'and, what's more, I'm convinced it can't be sold.'

"He was discouraged. So was I.

"'I'll tell you,' I shot back at him, 'just what we're going to do. You're coming in to Detroit to work. So are all the others. From now on, we'll work in a group, close together. There will be days when I'm discouraged, and you're not; you'll pep me up. Other days, when I'm feeling good, I'll encourage you. We'll lean on one another, coöperate, and stand or fall together—and I do not think we will fall!'

"From then on, we began to get results. And that, incidentally, is a keynote in our sales organization to this day, when we have nearly a thousand men. They never work alone and unnoticed, to become more and more discouraged, if discouraged at all, and finally perhaps to fail."

Burnette's employers, as explained, thought he might be able to do fifty thousand dollars' worth of business in a year. He closed his first year with sales of exactly two hundred and seventy thousand dollars, and he was earning at the rate of twenty-five thousand dollars a year.

With such achievement, or much less, another might have been well content. But Burnette, I have told you, never has learned the meaning of "good enough;" never could he be at peace with things which he found small and easy. Not in sympathy with the management of the business, he broke away early the next year to start his own company, built around a product embodying the same general ideas.

"I had saved about six thousand dollars the previous year," he said. "That, plus five thousand dollars put in by a man I took into partnership, was the start. Once, later, we added fifteen thousand dollars from the outside. But the rest is growth from within."

But before growth began, failure stood grinning at the door a thousand times, and Burnette found himself pitted against obstacles and discouragements such as even he never had met before.

"We moved to Cleveland," he said, "because that was the best place to get our utensils made; but long before there was a glimmer of proof that we might come through, our money was gone.

"For six months I did not draw a penny in salary. I bought no clothes, nor did my family. One day my wife, in desperation, said she simply had to have a few dollars to buy some things for the children—but I could not give her even a few dollars. She had made friends with a school-teacher who owned a little restaurant. She went to work in this restaurant until she got enough to buy the necessary clothes.

"THE firm that we got to make our utensils would extend us no credit. We had to pay cash on delivery. We, on the other hand, began selling to our customers on time, therefore our money was tied up, and at first went out much faster than it came in. What we did was to deliver as much on each order as the factory could give us. We then got customers to sign instalment papers covering the balance. These papers we sold at a discount to a finance company dealing in such transactions. This was how we got cash—such as we did get—to meet our bills.

"But there were troubles even here. Time after time, the finance company ran into this situation: they tried to collect an instalment from a customer who had received only part of his goods; he stoutly objected to paying any more until he got his teakettle, or frying pan, or whatever it was he lacked; and the finance company could not collect. They definitely threatened to have nothing more to do with us. The ice was terribly thin; but we managed to skate on it.

"Money simply was not to be had by us at the banks in the usual way. At one bank I was known personally to one of the principal members of the firm; but I was refused an open line of credit of just one thousand dollars.

"When things were at this darkest stage," Mr. Burnette went on, with a smile, "we tried to *give* fifty per cent of the stock in our company to the people who were making our utensils, simply to have them sufficiently interested to assume a share in the responsibilities and obligations which were piling up on us.

"Before accepting, they wanted an accountant to make an investigation. He did. Next, they wanted a lawyer to make an investigation. He did. And upon the combined advice of these two experts, they refused to take half of our company even as a gift!"

THE break came swiftly when it did come. Just two years after this disheartening refusal of half the company's stock as a gift, Burnette's partner was taken seriously ill and sold his interest in the business. He had originally paid five thousand dollars for it. He received five hundred thousand! By then, the years of accumulated hardship, of discouragement, of study, had shown the way to a patient, determined, quiet man who kept on trying in spite of all.

An early decided turning point for the better came at the end of the first year, directly on the heels of the first sales convention.

"We held the convention," said Mr. Burnette, "in Chicago, where at the start I had concentrated the larger part of our sales force. I made great preparations. I could not afford a new suit; but I had the old one cleaned and pressed so it looked pretty good. My address came in for hours of preparation and polishing. It was not much of a convention, and not much of an organization, but, such as it was, I was its president, and I was determined to make the best showing possible.

"It so happened that the head of the finance company which had had so much trouble with our instalment paper, was present. He went away full of enthusiasm. Later, he came back, saying he wanted to interest a few men and buy into the company.

"'Why,' I asked, 'should we sell? We've had a hard enough time; but we're coming through now.'

"'You're dead broke on your feet, and don't know it!' he replied. "He went on, and convinced me that we could use additional capital to great advantage.

"I knew he was right. Accordingly, I agreed to sell a one-third interest in the company to the group of men of whom he was one. It was a wise move, for it brought to our side some very capable and experienced men, who have helped us enormously."

This all happened less than five years ago. The rest is growth. The frail, failing company led by the teamster from the Tennessee back country, a company which was not thought sound enough to warrant a loan of one thousand dollars, to-day can borrow a million on open account—if there were any need for it.

William Burnette, who is responsible, is a modest man, a sincere man, neither boastful nor claiming credit.

He believes in helping every man to realize himself to the fullest extent, in all ways. Literally hundreds have come to work for him discouraged, without a hundred dollars to their names, and have stayed to earn more than they ever earned before. Some of his executives draw larger salaries than he does.

"And deserve it!" he says.

He is truly a man-builder. His strength, nursed through the years of his trials, lies in his ability to get men to try—to discover and to use their talents.

To Open-Minded Men

Will you give us a chance to prove the supremacy of this unique shaving cream before you buy?

A 10-DAY TEST FREE

GENTLEMEN:

We have built a large business in Palmolive Shaving Cream by offering men a free test before they spend a penny.

Millions have responded, and millions have never gone back from it to what they once thought best. Thus our whole sales policy rests on the merits of the cream itself.

Now we ask *you* to try it—to make our test and judge for yourself. The decision rests on you. You risk nothing. Obligate yourself in no way.

Now, Perfected

It took years to create this tube of Palmolive Shaving Cream we offer to send you free.

129 formulas were rejected after exhaustive tests. Then came success. We had learned the 5 things men wanted by asking 1000 men to tell us. To embody them all in a shaving cream was our goal.

Men who use it make bolder claims than we do ever. Yet we do claim that the big majority of the men who once try Palmolive Shaving Cream continue using it.

These 5 Big Features

1. Multiplies itself in lather 250 times.
2. Softens the beard in one minute.
3. Maintains its creamy fullness for 10 minutes on the face.
4. Strong bubbles hold the hairs erect for cutting.
5. Fine after-effects due to palm and olive oil content.

Let Us "Show You"

No matter how much you like your present method, there may be a better way. At least find out before you change. That's all we ask. The coupon is put here as a reminder. Please use it.

THE PALMOLIVE-PEET COMPANY, CHICAGO, ILL.

To add the final touch to shaving luxury, we have created Palmolive After Shaving Talc—especially for men. Doesn't show. Leaves the skin smooth and fresh, and gives that well-groomed look. Try the sample we are sending free with the tube of Shaving Cream. There are new delights here for every man. Please let us prove them to you. Clip the coupon now.

10 SHAVES FREE

and a can of Palmolive After Shaving Talc

Simply insert your name and address and mail to Dept. B-1429, Palmolive, 3702 Iron St., Chicago, Ill.

Residents of Wisconsin should address Palmolive, Milwaukee, Wis.

For One Whole Year the World Was Mine!

(*Continued from page 29*)

with a Chinese trader, and fishing with a piece of line and a hook that I carried wherever I went.

I finally reached Java on a Dutch trading steamer. The place was too civilized, and I made my way as quickly as possible to Soerabaya, and thence by a trading sampan to Bali, Flores, and the other Soomba Islands. Somewhere among the islands I caught malaria, and I was dead on my feet for three weeks, not knowing what ailed me, and far away from any doctor. I could eat nothing but rice, mangoes, and coconut milk; just enough of them to keep me alive. Finally in Singaradja, a little Chinese doctor named Ongkie-Honk cured me, and waited two months before I could pay him. I'll never forget Ongkie-Honk, with the name like a flock of geese.

These islands were fascinating, as all islands are, but they were not what I was looking for. Their inhabitants showed the influence of the white man, and I wanted to see lands and people that no white man before had ever seen. I wanted to hear the boom of medicine drums, paddle up uncharted rivers, and bivouac with head-hunters.

A MONTH later found me in Banjarmasin, South Dutch Borneo, determined to penetrate the jungle to the land of the head-hunters. My equipment at that time was the one suit of whites I wore on my back, and about forty dollars in Dutch guilders, the last of my sea wages.

The Controleur of Banjarmasin was more than kind to me. Through his letter to the Military Department I was given access to maps and charts, and equipment that I would need was suggested. Four days later, with a kerosene can of Java tobacco, red beads, small mirrors, and seven tiny bottles of perfume, I took the fortnightly river boat to Poeroek-Tjahoe, three hundred and fifty miles up the Barito River, the last and most remote outpost in Dutch Borneo. In my pocket I carried a letter to Captain Ilgen, the Commandant of Poeroek-Tjahoe, requesting that I be given any necessary assistance.

Poeroek-Tjahoe is in the center of the Siang Dyak country, and there were four white men in the village, all Dutch officers. When I told them of my plans, they did everything in their power to help me. Captain Ilgen gave me a long ironwood dugout, an escort of three Javanese soldiers and a personal servant. I hired four Malay paddlers, and bought kerosene cans of rice and dried fish for food; and five days later I was headed up the Barito River to the rhythmic booming of paddles against the gunwale, to find, if possible, the Pudjaboeng Dyaks, a snake-eating tribe of mountain dwarfs, and the most savage head-hunters of all Borneo.

Twenty days later the river narrowed. The jungle closed in, and all but covered us. An occasional great crocodile lay on the mud bank, his mouth wide open to let the tick birds pick his teeth. Troops of red-haired monkeys fed in the tree tops, to flee scampering and screaming into the foliage at our approach. At night, when we hunted the wild boar by lamplight, the cries of the orang-utan haunted the blackness like the voice of a deserted man. The jungle teemed with life. It buzzed and sang and throbbed with life. And through it all we drifted silently, like a party of ghosts.

WE CAME to rapids miles in extent; to gorges where the white water rushed madly over boulders. Once the big dugout overturned from the slap of a wave, and went under. We saved ourselves, but lost seven cans of rice, some cooking pots, two spears, and a camera that I had borrowed at Poeroek-Tjahoe.

At the next village, six days later, we tried to buy more rice. The chief, a powerful, squint-eyed Punan who wore his head-hunting knife continuously, refused to trade. He did not want tobacco, or red beads; he said he had no food. I finally discovered that he had a profound admiration for my shirt and shoes, so, in exchange for my only pair of shoes, a pair of khaki shorts and a shirt, we got twelve baskets of rice and some dried fish. I walked barefoot for three months afterward. I also traded my silver cigarette case to another Dyak for a twenty-six-inch head-hunting knife with a carved ivory handle that had human hair sprouting from holes in the ivory. It was invaluable for cutting through the jungle, and for shaving the leeches from my ankles and feet.

That night the Dyaks sat awake until early morning wondering who I was and why I had come into their country. Scores of tattooed head-hunters sat around me, their bronzed muscles and chests glistening in the torchlight, their black eyes sparkling like onyx. They talked rapidly and all at once, gesticulating, pointed to me occasionally, shaking their heads vaguely. The chief sat with his back straight as an arrow, speaking a few decisive words now and then, nodding and puffing at a banana-leaf cigarette.

Had I come to dig the earth? they asked; to cut the trees for rubber? Had I come to kill the sapi, or the rhinoceros? No; I had not come to do any of those things. Then why, they wondered, had I come.

All my coolies feared for their heads as we approached the far Siang country, and both they and the soldiers, one of whom had been raised in a mission school and professed Christianity, were extremely superstitious. One night this Christian soldier awakened me by calling out and groaning in his sleep. I crept over to him, and saw the poor chap struggling and writhing on the earth as if caught in the coils of a python.

The next morning he said he had dreamed that the dugout overturned again in the rapids, and that the River Ghost was dragging him into the whirlpools. When the other men heard this, they stopped packing up the baggage, and said it would be certain death to leave before the sun rose above the tree tops. Nothing I could say would urge them to move; they sat mutely before me, staring at the ground.

Later I hired Dyak paddlers, who took vengeance upon the River Ghost at every opportunity. As we shot the rapids, the long-haired head-hunters rose up in the dugout with wild screams, and, swinging their heavy paddles like battle axes, knocked the tops of the waves off right and left. Once in the quiet water below, they stopped and looked back. Then, giving a long cry of victory, they dipped in their blades and sped on down the river.

We were approaching a village one afternoon, when I was attracted by a persistent low drumming and chanting. On the bank of the river I saw a crowd of Dyak men, women, and children; in a quiet *moera*, or lagoon, of the river was a medicine man, old and bent, squatted in a dugout no wider and scarcely deeper than a surf board. He was beating a small drum with the fingers of his left hand, and paddling gently with his right.

I landed quietly. The Dyaks, usually excited at the approach of a white man, stayed in their places, and whispered, "*Booayah, booayah!*" I looked carefully, but could see no *booayah*, which means crocodile. I saw only a very old witch doctor chanting and beating a drum on the quiet lagoon.

At length the witch doctor began to approach the shore, and I made out two knobs about a foot apart, following his dugout. They were the eyes of an enormous crocodile. Gradually the witch doctor approached the shore, and crept out of the dugout. He squatted down and as he continued his drumming and chanting, the crocodile approached to within a yard of the shore. It was all of twenty-four feet long, and as the witch doctor retreated up the bank, the great saurian slowly followed him, resting his head and fore claws upon the mud.

Immediately, all the Dyak men circled around and slipped a rattan noose over the crocodile's snout. The witch doctor leaped in the air, drumming frantically, screaming and waving his arms in delight. Bound and trussed, the crocodile was dragged to an ironwood enclosure in the village.

Crocodiles are feared by the Dyaks as evil gods. This particular beast had, they said, recently taken a buffalo and a child from the banks near the village; so for some days the witch doctor blew smoke into its nostrils and fed it choice venison and boar meat to appease its revengeful spirit.

FAR up the narrow Boesang we came to a village that had been deserted because of ghosts. It was almost swallowed up by the jungle; but a number of half-finished dugouts, baskets of rice, and paddles left about showed that it had been hastily and recently deserted. In one hut were two fine medicine drums. The witch doctor had used them in an attempt to drive the

ghosts away from the village. Failing to do so, he had left them behind as bewitched. I wanted to take one of the drums with me, but the black looks of my Dyaks and soldiers warned me of the trouble that might arise if I did so.

As we passed through the Undanoem country, the medicine drums throbbed night after night. Sometimes they seemed miles away; the next instant they sounded only across the river. Always they pulsated with that light, quick touch that one could never locate. About two o'clock one morning, after I had been kept awake most of the night by their persistent tom-tomming, the drums sounded so close that I fancied they were actually only a mile down the river. I awakened a Dyak and two of the soldiers, and set out to find them and see what was up.

We located them. A witch-healing was going on in a tiny hut flickering with torchlight, in the center of a rice field. The Dyak said it was very bad to go close, and the soldiers refused to accompany me. Alone I approached the hut. I could hear the hut creaking and shaking, and the panting of the medicine men as they danced frantically inside. The drums boomed and thudded; now and then a voice would chant a rumble of monotonous sounds, and be smothered by the tom-tomming.

My bare foot snapped a dry twig, and almost instantly the light went out in the hut, and the drumming ceased. I lay low, knowing that a poisoned dart shot in the night has an uncanny way of finding its mark. Then I called out in Borneo-Malay, saying that I was a white man with medicine for the sick person. After some moments the lights were uncovered, and I approached and climbed up the notched log of the hut.

TWO medicine men, striped with white chalk and glistening with perspiration, were dancing slowly about the body of a woman. They jangled monkey tails and bits of bone over her face, and rattled their fingers over a small drum clasped between their thighs. Within the shadows of the torch, a woman witch doctor, stark naked, pounded a large drum, and behind her were the dusky forms of naked men and women. Blowpipes and knives lay beside them. All were chewing penang, and their mouths dripped the red juice.

When the two medicine men were so fatigued that they could no longer dance, they sank to the floor, and the woman doctor took up the healing. I had been watching them for over a half-hour, when it occurred to me that the sick woman was abnormally quiet. Her lips had not moved, nor did she appear to breathe. I approached closer, and laid my hand upon her forehead. She had been dead for at least an hour.

Realizing that the moment her death was discovered I would be accused of having cast an evil spell over her, I told the men that I was going for the medicine, and would return in the morning. No one gave any sign of having heard me. Once outside the hut I joined my own men on the river bank, and we paddled back to the bivouac as quickly as possible.

Going past the farthest Dyak villages we came to great waterfalls and passed through mountains covered with fogs and heavy mists. At this altitude, the jungl was carpeted with dense mosses a foot thick. On the jungle floor there was no light, no life. A hundred and fifty feet above us, Borneo was an immense aviary, a conservatory of extravagant beauty. There, great clumsy hornbill birds flapped from bough to bough, screaming and squawking hoarsely; across the tree tops and lianas that bridged the river, troops of red and gray monkeys scampered in endless, bouncing processions.

IN THE foothills of the Muller Mountains seven hundred miles from the Java Sea, I came upon the Punjaboeng Dyaks. Great drums boomed through the jungle at our arrival, calling the warriors to the village, and a file of tiny tattooed savages armed with long blowpipes and poisoned darts stood upon the bank to meet us. I gave presents of red beads and tobacco to the chief and his men, and through one of the Punjaboengs who understood the Undanoem dialect I was able to make myself understood, using one of my own Dyaks as interpreter.

In this remote tribe, the wildest in all Borneo, I found a *tin can.* How it got there, I cannot say. It must have passed hands a hundred times before it finally reached the Punjaboeng who possessed it; very likely it had been the cause of many lost heads. It was used instead of bamboo as a top for a blowpipe dart case, and carefully covered with braided root, and polished. My own empty tin cans were the most valuable trading stores I possessed.

The tribe was apparently on the friendliest of terms with me. I walked through their houses, and saw the rows of smoked heads hanging from the rafters. I stumbled over old men and women lying asleep in the sand boxes that stretched the entire length of the rooms. I went hunting with them in the jungle, saw them call deer, and kill them with poisoned darts. Night after night, in the long-house of the chief, I listened to tales of ghosts and head-hunting victories.

I was lying in my bivouac one night, when a mingling of musical sounds drifted down from the far end of the village, and stopped. With a pastoral quietness they began again, blending one into the other, broken but beautiful, as if a child were fingering the stops of an organ. Softly, and scarcely audible, arose an undertone of dull drumming—the patting of feet upon damp clay.

I walked up to the compound. By the light of a small torch that flared and flickered beneath a tree, eight young men moved in a slow circle behind a leader. Hornbill feathers flashed white against their black hair; the ivory handles of their long knives jerked up and down as they raised and lowered their arms. With a stamping, almost careless gait they passed in silhouette before the flicker of light, to the strange rhythm of the music, and a soft clapping of hands that sounded from the darkness around.

Suddenly, I realized that I was witnessing the beginning of a head-hunting party. This was the war-dance of the Punjaboengs! As my eyes became accustomed to the darkness I was able to distinguish a great half-circle of people enclosing the dancers. Old men and women, children and babes, all were gathered on the compound to cheer on the warriors.

Two shields were laid upon the ground, and as the proper rhythm of the beautiful reed music was reached, two young Punjaboengs leaped into the circle, pivoted and faced each other. They balanced, swaying to the rhythm of the music; swept the shields from the earth like hawks and crouched at opposite sides of the circle.

Knives flashed from their scabbards; slowly approaching each other, they sliced the air before them, as if clipping off the ankles of an attacking foe. They stopped, and with the fastidious care of serpents, uncoiled themselves at each other, swaying and writhing to the droning of the reeds. Now, swift, swift, swift as lightning, their bodies flashed in the torch light; swords that had tasted Mahakam blood fanned the bodies of fellow tribesmen—came within a hair's breadth of head-hunting. They danced upon alternate legs, shifting the shield with each move; they leaped, and, turning in mid-air, brought the keen blades down upon the neck of an imaginary foe. Another pause; hands and feet moving to the sounds of the music; then, with the shields held aloft and the knives pointed to the stars, both warriors bent backward until their heads touched the earth.

The music stopped; the war-dance was ended. I had almost forgotten that I was a white man, for the hypnotic music and dance had eaten into my soul and sent me back to the time when my ancestors, too, took their judgment from the moon.

A barbaric orgy and festival followed. Witch doctors smeared with soot and striped with white chalk scrambled over the compound, eating dirt and clawing the earth like poisoned leopards. Little children and women danced wildly to the boom of medicine drums, and everywhere men and women, blind-drunk on *toowak*, celebrated the victory that was to be theirs.

That night eleven men disappeared, fully armed, into the jungle.

I CAME out of Borneo silent, and awed. The jungle had given me a new cloak, a new vision of mankind. I had penetrated uncharted regions. I had ascended tropical rivers filled with man-eating fish, had stood spellbound beneath magnificent waterfalls; I had been gripped by the mystery of my ancestral environment—but I was not content. Before I had reached Singapore, two months later, I had decided to cross the Arabian Sea in a native dhow, to sail up the Persian Gulf. I hungered for more of this thing called Adventure, of which I had tasted.

From the sale of three articles to a Bombay magazine I made four hundred and fifty rupees, and I arrived in Karachi, at the edge of the Baluchistan desert, toward the middle of February.

Always looking for a lead on my next venture, I wandered into a Hindu wedding one night on a crooked little street. It was one of those delightful Oriental affairs where everyone is welcome—Moslem, Buddhist, and Christian alike. They set me on a Persian rug, put flowers in my hand, and brought me plates of candied fruits and Eastern delicacies dripping with sweetness. The bride was a frail little thing with long, black lashes and

Small Bubble Lather

soaks whiskers soft

—douses each hair with water at base— softens beard right where razor works

WATER, science says, is what really softens beards. Bubbles are shells of water. Hence more bubbles mean more water. Carry water down where whiskers sprout from skin and result is a better shave. Colgate's microscopic bubbles carry many times more water. More than that, their tiny size lets them cluster round the beard base — soak it soft — as lather pictures below show.

The moment Colgate lather forms on your beard, two things happen:

1. The soap in the lather breaks up and floats away the oil film that covers each hair.

2. With the oil film gone, millions of tiny, water-saturated bubbles bring and hold an abundance of water down to the base of the beard, right where the razor does its work.

Because your beard is properly softened at its base, your razor works easily and quickly. Every hair is cut close and clean.

ORDINARY LATHER

This lather-picture (greatly magnified) of ordinary shaving cream shows how large, air-filled bubbles fail to get down to the base of the beard, and how they hold air instead of water against whiskers.

COLGATE LATHER

This picture of Colgate lather shows how myriads of tiny, moisture-laden bubbles hold water, not air, in direct contact with the base of the beard, thus softening every whisker right where the razor works.

A WEEK'S SHAVES—FREE

Try this unique "small-bubble" lather at our expense. The coupon below will bring a generous trial-size tube—free.

EXTRA DIVIDEND. We will also include a sample box of Colgate's Talc for men—the new after-shave powder that *keeps* your face looking freshly shaved.

SOFTENS THE BEARD AT THE BASE

deep eyes. The bridegroom was bashful and shook hands limply, like all people who have not become familiar with our custom of greeting.

Later in the evening I discovered that one of the guests was the clerk for a line of trading dhows that plied between Karáchi and the Persian Gulf ports. I told him of my plan, and he said he could easily help me to find a dhow.

Luckily, the weather cleared down, and a dhow was leaving for Sohar, Arabia, in three or four days. It was five days, however, before I started my voyage. The dhow was a heavy timbered craft, and was loaded with rice and potatoes. The three Moslem sailors cooked and slept aft beneath the sheltered poop deck. I ate fish curry and rice with them—almost exactly the same food I had eaten for four months in Borneo—and slept on the sacks of rice beneath a tarpaulin shelter. I had sent most of my money on to Baghdad, and had only a change of clothes, a razor, a Dyak ghost charm, and a tooth brush with me in a little sea bag I had made on the "Tramp."

Twelve days later the skies darkened and a great bank of blackness appeared on the horizon to our north. Particles of sand began to fill our eyes; our throats became dry and rasping. A sandstorm was coming up; the dreaded *shimal* of the Persian Gulf was sweeping down upon us. The Moslems gave the dhow all the extra sail she could carry, and we beat across the wind for the nearest land, the wild coast of Oman.

WE STRUCK a shoal sometime that night, at what seemed to me the worst part of the storm. I was all but suffocated with sand and salt water, and as the waves smashed into our boat and broke over us, I wondered how we could ever hope to reach land alive. To my amazement one of the Hindus leaped over the lee side, partly sheltered from the breakers, and began to *walk*. I followed him. We were on the beach, and all of us managed to reach the shore safely. We found windbreaks behind rocks, and, covering our heads, Arab fashion, awaited the morning.

It was impossible to put to sea again the next day. The dhow was high and dry, and even at high tide, after we had emptied her of the cargo, it was impossible for the four of us to budge her. We judged that we could not be more than thirty miles from Sohar, and decided to go there for aid. The Hindus considered it dangerous to go inland because of the Arabs, so with a skin of water and a bundle of dates salvaged from the dhow, we started along the sea coast, north to Sohar.

As we were crossing a spit of sand, we saw a group of mounted Arabs riding down upon us from a rocky ledge. There was nothing to do but wait until they rode up. Twelve were in the party, eight of them mounted on ordinary camels, three on fine-looking horses, and the foremost, the one who proved to be the Sheik, rode a beautiful milk-white camel. All were armed with modern rifles, and the Sheik carried a Colt automatic pistol in his waist band. All of them had the handles of short, curved knives sticking from their waists.

They approached in no hurry, and arranged themselves in a half-circle, still mounted. One of the Hindus could speak

Why *changed* motoring conditions demand a new margin of safety

New winter dangers!

Cold weather ahead

Is your engine protected?

eezing weather may come w when you least expect it. d changed driving conditions nand a greater lubricating rgin of safety than ever be- e.

The yearly mileage of the rage car is 25% or more ater than it was ten years . Most cars are now closed s and this extra mileage is gely winter mileage.

Would you deliberately in- ase your engine wear 25%? . But you may, if unexpected d weather finds poor or in- rect oil in your crankcase.

Slow starts mean added strain the battery. More. You use choke longer. Excess gaso- e vapor gets by the piston gs and dilutes the lubricat- oil in the crankcase.

Using light, thin, so-called inter oils" does not solve problem. They make start- easier only and then fail to e adequate lubrication pro- tion to important engine parts that are operating under nearly the same heat and friction conditions as in the summer.

Gargoyle Mobiloil Arctic recommended on the Mobiloil Chart for the winter lubrication of many cars, is not a light, thin oil. It possesses the full, rich lubrication qualities so much needed under winter operating conditions yet permits easy starting even in zero weather.

Mobiloil Arctic has that extra margin of safety, so greatly needed to meet winter conditions.

Don't forget that freezing weather may come when you least expect it. For an engineering margin of safety, it will pay you, (1) to drain off the used oil from your crankcase and (2) refill with the grade of Gargoyle Mobiloil recommended for your car in the winter column of the Mobiloil Chart.

SPECIAL WINTER CHART

How little she really understands—herself!

How much she needs your help in many things like this!

SHE cannot even guess what endless care she needs—this woman you are making.

Not just her success today in studies and in play, but her whole happiness in life depends on you—upon the strength and health that you are building for her from day to day.

There are so many little things which you and you alone can do for her.

One of these precautions, one of these seemingly little things that mothers do, has recently assumed a new nation-wide importance.

In the schools of many great cities test after test has shown the vital importance of one point: the kind of breakfast children eat. It influences deeply not only their class room work but their whole well being.

The National Education Association and the American Medical Association, after a two years' study by a joint committee are now urging mothers to give their children a *hot* cereal in the morning.

This rule is now displayed on the walls of more than 60,000 schools:

"Every boy and girl needs a hot *cereal breakfast"*

It is now known conclusively that children are more alert, study better and learn more when this rule is *regularly* observed. Only a *hot* cereal can furnish the boundless energy needed to meet the strain of class room work.

Recommended for over 30 years by health authorities as ideal for growing boys and girls, Cream of Wheat stands ready and waiting for your child. Probably you know its unique advantages:

First: It furnishes an abundance of mental and physical energy. Second: It is easily and quickly digested. Third: The youngsters love it.

This little care your children need so much at breakfast, to do their best in school and in life—begin it now! Send them off to school tomorrow morning really ready for a day's work. Give them a good hot bowl of Cream of Wheat. Your grocer has it.

© 1927, C. of W. Co.

***FREE**—Mothers say this plan works wonders—*

To arouse your children's interest in eating a hot cereal breakfast, send for attractive colored poster to hang in their room. There is a four-week record form on it, which the children keep themselves, from day to day, by pasting in gold stars. Poster and gold stars sent free with authoritative booklet, "The Important Business of Feeding Children," and sample box of Cream of Wheat. Mail coupon to Dept. P-9, Cream of Wheat Co., Minneapolis, Minn.

For a girl aged.....*For a boy aged*.....

Address.....

Arabic, and I told him to tell the Sheik that I was on government duty from Muscat, and wanted to be taken immediately to Sohar. One of the Arabs laughed, and then the Sheik asked if I were "Inglesi." Knowing that Americans were unknown in this part of Arabia, I said yes, I was English. At this they looked very blackly at me; the Sheik reined up his camel, and they rode back, motioning for us to follow them.

It was past noon, I judged, when we arrived at an encampment of black tents in a narrow valley far back from the sea coast. My pockets were searched, and one hundred rupees and my Dyak charm, my only possessions, were taken from me. The Hindus were immediately pushed into a small tent, and I was given some water and dates and made to sit in the Sheik's tent. I never saw the Hindus after that moment.

The Sheik was a tall, stooping figure of a man, with a black beard, and an oily left eye. His right eye was afflicted with a cataract, and in moving he cocked his head to one side like a bird, for better vision. On a woolen string about his neck he wore a nickel Swiss watch, which he wound every half-hour or so.

FOR twelve days I lived in the Sheik's tent. I had nothing to do, and I had no idea of what they were planning to do with me.

On the morning of the twelfth day, the Sheik rode off as usual with his men, leaving me guarded by a single Arab. This guard allowed me to roam about the camp as much as I wished, but grew furious when I started to go where the camels were feeding. His own mount, a finely muscled bay horse, stood close by my tent.

The Arab was making tea in a little aluminum kettle about ten o'clock that morning, and I was lying within the tent alone. A number of heavy sticks and tent pins were piled at the back of the tent. Selecting the heaviest of them, I crept out behind, and approaching my guard from the back struck him with all my strength upon the head. I stripped off his bandolier of cartridges, snatched his rifle from the ground, and leaping upon his horse started at full gallop for the coast.

About mid-afternoon I reached a cliff of rugged black rocks and surmounted it, to see the Gulf of Oman stretched before me. Almost directly ahead a bright red steamer of one smokestack plied leisurely toward the Persian Gulf. It was a good half-hour before I could circle ahead and reach the beach. I rode abeam of the steamer in the shoal water, waving my shirt to signal her. At length she put about and came in close; a boat was launched after some time, and two hours later I was aboard the S. S. "Bendoe," a little oil steamer bound up the Gulf from Muscat.

I had had hardship with my excitement, to be sure, but I had *lived*, and the world was at my feet. I was in rags and shoeless, yet all the pearls of the Orient could not have bought my joy, for I had captured another precious moment of existence; I knew what it meant to be alive and to want to live on.

A bath, a clean bed, and a wonderful dinner on board the "Bendoe"! What luxury! Captain Harris and the mate

"You always want to leave"

A familiar, pathetic figure—the wife who always gets tired and leaves the party before anyone else. So often it is her own fault.

No woman who has a normal foundation of good health can be forgiven for failing to "stay young with her husband."

Science offers a simple protection for her health and youthfulness — sane habits of living, sane habits of diet and the *proper* practice of feminine hygiene.

But be sure you get the *facts* about feminine hygiene. Send for the free booklet offered below. It contains the facts and simple directions you must have. It was written for women by a woman physician.

Mail the coupon today. The booklet will reach you in a plain envelope.

Fads in personal antiseptics come and go, but the number of women who use "Lysol" Disinfectant is increasing *at a greater rate today than ever before!*

Don't experiment — don't be misled by false theories—make no mistake—only a poison can kill germs. Send for our booklet now. But in the meantime be safe, be sure. Buy a bottle of "Lysol" Disinfectant today. Complete directions come with every bottle.

Made by LYSOL, Incorporated, *a division of* Lehn & Fink Products Company. *Sole Distributors* Lehn & Fink, Inc., Bloomfield, N. J. In Canada, Lysol (Canada) Limited. Distributed by Lehn & Fink (Canada) Limited.

Full Half the Shave *is the* Aqua Velva *after-shave*

Aqua Velva is for the *newly shaven skin*. The unprotected skin tends to get stiff and dry as the day goes on. Aqua Velva protects it, keeps away stiffness and dryness, keeps the skin flexible, well conditioned, *keeps* it as Williams Shaving Cream *leaves* it.

Then, too, Aqua Velva helps to heal those tiny nicks and cuts, seen and unseen, that your razor leaves.

Try Aqua Velva. You will like its stimulating thrill. And as an aid to good face grooming a week will show you how worth while the Aqua Velva habit is.

Williams Aqua Velva

For use after shaving

50c *a bottle or*

FREE—a trial size, if you like. Just say "Aqua Velva" in a letter or a post card. Address: The J. B. Williams Co., Dept. 112, Glastonbury, Conn., (Canadian factory: Montreal)

gave me clean underwear, a pair of shoes, a pair of blue pants, and a heavy officer's jacket. At night we wound up a battered old phonograph, and as we sipped our drinks a cracked record played "Brown Eyes, Why Are You Blue?" over and over again. The other two records were "The Preacher and the Bear" and "Too Much Mustard."

I STILL wanted to see more of the desert, and as we skirted the coast of Persia, the fascination of its barren plateaus and lumbering mountain ranges began to grow. We stopped three miles off the shore from Bander-Abbas, and with the blessing of Captain Harris I went ashore in the dhow that had come alongside to take oil.

There were three white men in Bander-Abbas: Major Richardson, who was the British Consul; a bank representative, and a British port doctor. The natives were medieval-looking Persians with bobbed hair, hooked noses, and blue smocks. But I was a European, and as the three white men would lose caste if I stayed with the natives the Consul invited me at once to be his guest. For five days we swapped experiences, and looked over maps of the caravan routes. I decided to go to Lar, an ancient city about two weeks by donkey into the interior.

I wired to Baghdad for one hundred and fifty of my three hundred rupees, and set about getting donkeys, cooking utensils, food, and a blanket. I could speak no Persian, but managed to hire the Consul's milkman, who could speak Hindustani, Persian, and a few words of English.

For nine days we tramped and rode over the arid plateaus and rocky mountain ranges of southern Persia. In the day it was blistering hot. The nights were so cold that we were forced to build tiny fires and drink hot tea to keep warm. The country abounded in antelope and gazelle, and once a great swarm of locusts swept by us, darkening the hills and smothering the rays of the sun.

Our only water was vile, slimy stuff from little pot holes that had been used by camels and goats. We were lucky to get it. Once my servant, for some unaccountable reason, emptied all the water out of my one skin, and we went for a day and a half before we came to the next water hole. There were salt streams a-plenty, but the sight of so much worthless water was maddening. I thought of all the water I had seen wasted from leaky taps, and resolved never to let one leak again, never to waste a drop of water. In Borneo I had come to hate the everlasting green of the jungle; now I would have given ten years of my life to chew a handful of green grass.

Going over a high mountain pass, we encountered a stinging blizzard, and walked all day and night to keep warm, for there was no wood to make a fire. Icicles hung from my beard, and my nose and hands became numb. The following day we were going through a heavy rainstorm on a low plain, tramping across miles of gluey clay. Then I would curse the rain, and vow it better to die of thirst.

We arrived in Lar after midnight, dead with exhaustion. The donkeys stumbled sleepily through the narrow, deserted

Miss Lota Sanders Today

CLEAN!

Years ago we set out to make the best dentifrice possible. Our chemists made countless experiments. They told us that the one thing a dentifrice should do is to clean teeth. We then produced Ribbon Dental Cream — designing it to do that one thing superlatively well. It is not medicated, because the testimony of leading dental authorities today sustains the original principle that the one function of a dentifrice is to clean.

Colgate & Co.
Est. 1806

Her SMILE... *hasn't aged a day in* 18 YEARS

ike others who have used this denti-ice, her teeth are sound and beautiful beyond the average

Miss Sanders, as she was in 1909

S a very little girl—when her mother first showed her how to clean her eth—it was Colgate's that she squeezed t on the brush.

Today—a grown woman with teeth per-tly preserved—she still uses Colgate's. r smile is as radiant as ever. It flashes clear message to you and everyone else xious to keep teeth healthy and attrac-e for years to come.

In this country, and in foreign countries e world over, you will find thousands d thousands of men and women who gan using Colgate's ten, fifteen, even enty years ago, and whose teeth are ceptionally sound and beautiful.

Many of these people are grateful ough to write to us. Some send their otographs also. As a result, each day e postman brings a few more letters to add to an already bulging file.

Many of these letters are from users who have brushed with Colgate's for at least a decade. We could fill the pages of this magazine with quotations from them —sincere, unsolicited reports from people proud of the soundness and attractiveness of their teeth.

Choose your dentifrice on the basis of results. Follow the lead of those who have already kept their teeth sound for years. Simply adopt for your own use the dentifrice most popular among people with well-preserved teeth.

There is nothing mysterious about these enviable results. The men and women fortunate enough to secure them did nothing that you cannot easily do yourself. They visited their dentists for periodic inspections. And they used Colgate's.

In such a vital matter as the care of the teeth, could there be any safer guide than the actual experiences of people like yourself?

So, for lovely teeth—for teeth that make your smile the social and business asset that it should be—ask your druggist today for Colgate's.

Or, if you prefer, send for the free sample offered in the coupon.

PECKHAM-FOREMAN, INC., NEW YORK, N. Y.

streets. I, too fatigued to ride farther, walked by means of the momentum that keeps one going after strength has given out.

My servant hammered upon the doors with his stick and hallooed down the streets, but no one unbolted a door, no one answered. A figure in black appeared in the street, ran ahead of us and disappeared into an entrance with a creaking of rusty hinged doors. Lar was a city of moonlit white walls, black shadows, and weird *gaz* trees that flared up from the courts like wisps of blue smoke. Finally we found the public caravanserai, and amid a swarm of donkeys, camels, Kurdish tribesmen, and fighting women and children, dropped off to sleep.

From Lar I continued on to Jahrum, then on to Shiraz, and a month later I was in Bushire, on the Persian Gulf. The British Vice Consul, who had already heard of my capture and escape from the Arabs, was incredulous when he heard that I had come through the bandit country of Lar. It was impassable, he exclaimed; men were killed and caravans were attacked there every month. Personally, he would not attempt it for a thousand pounds. But I was never more hospitably treated in my life than at Lar.

I took the boat to Busra, went on to Baghdad, and then crossed the Iraq Desert by the Kowatly Tawil Transport Company's motor-cars. At Beirut my adventures were at an end. My feet were hard as leather, my skin was the color of old parchment, and I was ready for civilization. I came back to New York on a steamer, reveling in the luxuries of the saloon, and with a skinful of memories to spice up the rest of my life.

AND now I know what luxury is, and I love it, appreciate it, and know how to enjoy it. I like to have servants attend me, to wear the finest clothes, and smoke the finest tobacco. And all because I have been in places where a clean change of clothes, a helping hand, a smoke, or a cool drink would mean more to me than all the wealth of India. So when I have a chance to get these things, I get them, and enjoy them, remembering the hard times. I appreciate the one because I know the other.

I have had adventures—a few; that, I think, is the rarest experience that man can ever have. I have exulted in the joy of living, tingled with the fever of living forever. These moments are supreme in the life of mankind, and they place the tramp, the poet, and the explorer on a single plane. They are the flashes of the Divine in mankind. Great painters have captured this moment on canvas; Shelley caught it in his "Ode to the West Wind."

And what *is* Adventure? It is the sensation one feels when he is fighting with every nerve, muscle, and brain for the joy of living forever. Its essence is the love of life!

THE JUNGLE, THE CONQUERING JUNGLE that white men may never subdue, is the theme of another vivid, powerful article by Eugene Wright, of whose adventures in strange places you have just been reading. Next month this remarkable young man describes and interprets the jungle for you.

It pays to know the difference between *The* HOOVER and a vacuum cleaner

TO YOU MY HUSBAND

I'VE quite a feeling about Christmas . . . and so have you. You give me fine trinkets to deck me bravely—all the world may see how handsomely you provide for me. Even the quite unnecessary things.

And I, who see in myself each year a little less of the girl you married, know how futile the brightest trinket is if I cannot match its radiance with my own. For nothing can ever take the place of those things which I am losing, in household duties a little too hard, a little too greedy of my time and strength.

Youth! Sparkle! The time for play and the zest for playing—these are the things I want! Won't you give them to me?

It's a *Hoover* I'm asking for. Most thoughtful of men, this Christmas may it be that?

GIVE *HER* A HOOVER AND YOU GIVE HER THE *BEST*

Just between ourselves . . *The Model 700 Hoover $75.00 . . . The Model 543 Hoover $59.50 . . . Only $6.25 down. Prices slightly higher west of the Rockies and in Canada*

A man's gift—
for every man

Here's a gift to brighten and smooth his day and face—this Mennen Trio Package containing a full-size tube of Mennen Shaving Cream, a full-size tube (he hates jars) of Mennen Skin Balm and a full-size can of Mennen Talcum for Men (the one and only kind that men like).

It's a gift that a man never forgets. He'll use it every day. If he hasn't used it before he'll bless you for bringing these Mennen shaving luxuries into his life, and if he's already a Mennen user you couldn't possibly please him better. For it's a revelation, the first time a man experiences the sweet, swift, smooth razor stroke that goes with Mennen lather. Of course, it's *dermutation* that does it, Mennen dermutation which completely softens the beard without need for rubbing or messing up your fingers. Dermutation relaxes and eases the tension of the tiny skin mounds at the base of the beard hairs, smoothing and leveling the way for a deft, clean razor stroke. Works equally well in water hard or soft, cold or hot. No scraping. No nicking. No rawness. Five agreeable, soothing emollients in the lather flush the pores and soften the face as a healing tonic.

Made with and without menthol

Lots of men like to revel in the brisk tingle and bracing zip of *mentholized* lather. So you have your choice now in Mennen. To get the mentholized, ask for the tube with the red ball.

He may get more expensive gifts but none that will bring more comfort and satisfaction than this kit-pack of Mennen Shaving Comforts. And, friend, if you don't expect one, why wait for the great day? Go get one for yourself. The Mennen Company, Newark, N. J., and Toronto, Ont.

MENNEN for MEN
PACKAGE

Dick Byrd—Gentleman

(*Continued from page 16*)

something in the lad's level gaze that transcended the callow spirit of upperclassman hazing; something in his erect carriage, well-shaped head, and clean features, something that stuck.

Providence works in devious ways. Dick Byrd did well in class, was popular among his fellows, and excelled in athletics. In 1912 he was graduated as an ensign, U. S. Navy, surely headed for a brilliant maritime career. But not long before he took his diploma a curious accident occurred. As a member of the gymnasium team he had mastered some hair-raising feats. Dropping from the swinging rings one day he twisted his foot. The X-ray showed a broken bone and stretched tendon. Both healed rapidly, and no defect showed at the legal graduation physical examinations. The true injury, however, lurked deep.

He went to sea. In the battleship fleet he became enamored of gunnery. His ship was scheduled to win the coveted trophy for straight, fast shooting, and Dick Byrd's turret was counted on as the decisive agent for victory. Then, just on the eve of action, came the tragedy—at least it seemed so at the time. The Fleet Medical Examining Board was gathered on the flagship. The official papers of Lieutenant Richard Byrd, U. S. N., lay on the table before them.

"SEEMS a shame when he has such a good record," said one.

"But he can't stand watch any longer. Don't you see he is useless on a ship?" said another.

Upon which the third, a plump, jovial medical officer who has long since gone to Europe to live on his retired pay, sagely wagged his head and said: "There is no hope for this youngster. Byrd's crippled foot compels him to give up active duty."

All as a result of the seemingly insignificant injury in the gymnasium!

It was a terrible blow to the boy. "I thought for a long time it was the end of everything," he now admits. "I wanted to be a naval officer. I had a lot of plans in my head all ready for the time when I should get a little more rank."

"Such as flying the Atlantic?" I asked.

"Honestly, that was one of them. Why, I have a letter I wrote years ago to Walter Camp asking him to help me get backing for such a flight."

"But what was the sense of it?"

Dick Byrd suddenly grinned that fascinating smile of his, "What's the sense of any of that sort of thing? If you stop to reason it out you see it adds to human knowledge and spreads control of the earth by mankind."

So he was retired and listed as a navy cripple. For a while he settled into a slough of despondency. Whatever he did, wherever he went, the stigma of physical incapacity was laid upon him. Official records blazoned the fact on every naval station.

"I might just as well have worn a wooden leg," laughed Dick, after a perfect

What I mean by *a smoke!*

I'LL always remember the day I met P. A. One of the fellows was bragging about *his* brand of pipe-tobacco. Called it a "world-beater" and other modest names. "Let me try a load," I said. "It can't be *that* good."

He handed me his tin of Prince Albert. I opened it, and got a whiff of the most wonderful fragrance I have ever known. A little less skeptical, I filled my pipe and lighted it. That first pull convinced me. I had to admit the boy knew his tobaccos. What a really marvelous smoke!

Cool as a porter brushing off the town tightwad. Sweet as an unexpected tip. Mild as cup-custard, yet with a full-bodied taste that satisfied as nothing else ever did. I finished that first pipe-load and asked for another. I found P. A. didn't bite the tongue or parch the throat.

I don't have to tell you that Prince Albert and I are buddies. We start the day together and go merrily along till bedtime. Satisfaction in every puff of this long-burning tobacco. It's like that every day. P. A. is what I mean by *a smoke!* Better get yourself a tin.

P. A. is sold everywhere in tidy red tins, pound and half-pound tin humidors, and pound crystal-glass humidors with sponge-moistener top. And always with every bit of bite and parch removed by the Prince Albert process.

PRINCE ALBERT

—no other tobacco is like it!

To Men who can't go to Sleep at night

This new food-drink from Switzerland offers a safe, natural way to instant *sleep . . . tireless, energetic days*

We offer you this 3-day test

Do *you* sometimes pitch and toss for hours before you go to sleep—then sleep fitfully the balance of the night?

If so—don't take drugs. They do not give natural, restful sleep. You wake up feeling "logy" and dull. Furthermore, there is no need for using a drug.

For modern medical science has found a *pure* food-beverage, called Ovaltine, that actually has the power to induce sleep. *Natural* sleep. Doctors everywhere recommend it. Not only because it gives sound, restful sleep but also because it is composed entirely of food vital concentrates that build up and restore your mind and body as you sleep.

As a result, you don't wake up feeling "logy;" you wake up feeling fresh, clear-eyed, and buoyant. Morning finds you a new man. You have the energy to carry you right through the day and into the evening.

We urge you to make the 3-day test we offer here. Prove to yourself the wonderful results of Ovaltine.

Why Ovaltine brings restoring sleep

FIRST—It digests very quickly. Even in cases of impaired digestion.

SECOND—It supplies your system with certain health-building essentials which are often missing from your daily fare. One cup of Ovaltine has actually more food value than 12 cups of beef extract.

THIRD—Ovaltine has the unusual power of digesting 4 to 5 times its own weight of other foods you eat. Hence digestion goes on speedily and efficiently. As a result frayed nerves are soothed, because digestive unrest, *the main cause of sleeplessness*, is overcome.

This is why, when taken at night, a cup of hot Ovaltine brings sound restoring sleep in a natural way.

Hospitals and Doctors recommend it

It is the special food properties of Ovaltine—*and absolutely nothing else*—that bring its wonderful results and popularity. It has been in use in Switzerland for over 30 years. Now in universal use in England and her colonies. During the great war it was served as a standard ration to invalid soldiers.

A few years ago Ovaltine was introduced into this country. Today hundreds of hospitals use it. More than 20,000 doctors recommend it. Not only for sleeplessness, but because of its special dietetic properties, they also recommend it for nerve-strain, malnutrition, backward children, nursing mothers and the aged.

Just make a 3-day test of Ovaltine. Note the difference not only in your sleep, but in your next day's energy. You tackle your work with greater vigor. You "carry through" for the whole day. You aren't too tired to go out for the evening. There's a new zest to your work; to all your daily activities. It's truly a "pick-up" drink—for any time of the day.

A 3-day test

All druggists sell Ovaltine in 4 sizes for home use. Or they can mix it for you at the soda fountain. But to let you try it we will send a 3-day introductory package for 10 cents to cover cost of packing and mailing. Just send in coupon with 10 cents.

OVALTINE

© 1928 T. W. Co.

Builds Body, Brain and Nerves

It is a pleasure to recommend Ovaltine. I had restless nights and a weak, no-account feeling in the mornings. Ovaltine gave me more energy and vim. I sleep better at nights.

John William Hayes
Knoxville, Tenn.

I can honestly say that Ovaltine is a wonderful thing for anyone who cannot sleep. I for one will surely stand back of it.

Geo. E. Debbold
Utica, N. Y.

THE WANDER COMPANY, DEPT. A-4
180 N. Michigan Ave., Chicago, Ill.

I enclose 10 cents to cover cost of packing and mailing. Send me your 3-day test package of Ovaltine.

war record gave him courage to recall his misery.

Then, with his career apparently in ruins, he went to Washington and asked to be put on active duty as a student aviator.

That was eleven years ago. "A pilot sits down most of the time," he insisted. "Why lose my services when I want to give them?"

It was typical of governmental red tape that the problem had to be given long and very serious consideration. Meanwhile, Byrd waited and squirmed. It is dreadful to contemplate what might have happened had this request not been granted.

As a great favor, he was finally put back on active duty as a flier. Since that day he has never been off active duty, although his status as a retired officer gives him full right to sit back and take things easy on a comfortable pension.

Furthermore, he fought the war as a Navy aviator, flew to the North Pole, and hopped the Atlantic Ocean. He has been cited for heroism or extraordinary valor no less than twenty-one times! Three times, Congress, learning of his valor, has voted his promotion to higher rank, a retired-list phenomenon rare as the proverbial hen's teeth.

Here are some of the citations taken from his official record at the Navy Department, Washington, D. C.:

Heroism in saving a man from drowning July 16th, 1914.

For saving a man from drowning August 15th, 1914, Congressional life-saving medal of honor.

Commendation from Admiral W. L. Grant, British Royal Navy, December 21st, 1918.

Commendation by Director of Royal Canadian Air Service, August 27th, 1918.

Commendation of Secretary of the Navy for courage, energy, and efficiency on first transatlantic flight, 1921.

Decoration by Government of Portugal for inventions of air navigational instruments, September 15th, 1921.

Commendation from General Staff of U. S. Army, June 10th, 1923.

Commendation from Secretary of the Air Ministry of Great Britain, connection with loss of dirigible ZR2.

Commendation for courage, arctic flying over Ellsmere Land and Greenland.

"Too bad we haven't more lame ducks like Dick Byrd!" exclaimed one congressman who had been studying our military retired lists for signs of graft.

BYRD, the cripple, got on the active list as an aviator by arguing that a pilot sits down most of the time. But he was not always sitting by any means.

Let an eyewitness tell of an instance:

It was after the war and just before Dick was detailed as aid to Theodore Roosevelt, Jr., Assistant Secretary of the Navy. He hated the idea of going ashore. "There's no action to it," he complained.

We were out off the Capes testing some pontoons in a seaway to find out whether they would keep a plane up. It was a raw, dark morning and one of those spring nor'easters came boiling down the coast and put an end to our tests. Just as we were hoisting our gear aboard a man fell over the side.

I remember Dick Byrd was standing right by the rail when it happened. He spun around, and let out a yell of warning to the man at the winch to hold everything. There were other yells; but Dick's was first, for his reactions seem to be abnormally quick.

FRANKLIN

Airman *Series*

Introducing

New, light weight 7-passenger models —the up-to-date family cars

AIRMAN FEATURES

Air-cooling—the advanced scientific principle now so widely endorsed by Airmen

Acceleration—the swift-darting, quick maneuvering of the pursuit plane

Synchronized 4-wheel hydraulic brakes—just a touch and you get action

Speed of a new kind—distance speed—all-day-speed—speed you use

Riding comfort—the swift, easy glide of the airplane

Larger motor—for any temperature, altitude or road condition, a wealth of power always available

Engine smoothness—the balanced purr of the turbine

7-passenger models—(128 inch wheelbase)—the up-to-date family cars—commodious and light weight

Advanced designs—having their counterpart in aeronautical engineering

The most *comfortable* mile-a-minute car ever built

Today, in the midst of the increasing public demand for less weight in large cars—for less bulk and unwieldiness—for greater responsiveness and ability—Franklin announces the new Airman 7-passenger models.

Here—in a Sedan, a Touring Car or a Limousine—you are offered a car you can use without restriction. Franklin led this tendency when it pioneered the Sedan body, and now it is the first to offer a truly spacious family car, having the exhilarating performance and easy manipulation of the runabout. In these new Franklins you can now enjoy modern 7-passenger roominess, with immeasurably greater riding comfort and yet have 25% less car weight to move about.

The new Airman Series is the latest triumph of Franklin's scientific light weight construction. Powered by a 24% larger motor—air-cooled, on the principle now so dramatically proven by Aviation—the Airman stands out as the leader in a new era of fast travel coupled with greater safety and comfort.

With instant acceleration and positively synchronized 4-wheel hydraulic brakes—with abundant hill-climbing power and the ability to operate at a higher average speed *all day*—the Airman's performance represents a wholly new motoring experience in store for you. Why not have your first ride today in the most *comfortable* mile-a-minute car ever built?

Hide-and-Seek is a costly game

if played in your letter files

THE search is on—for an all-important letter which cannot be found in the files. Time wasted — money wasted — nerves on edge.

Letters, like other office records, find easy hiding places in an inefficient filing system. Hiding places not discovered until hours or days later—often never at all. "Hide-and-Seek" is indeed a costly game when played in your letter files.

Information from your files should be quickly, easily, accurately obtained. And this is possible only if your filing system is scientifically adapted to the *size and exact nature of your business.*

Globe-Wernicke Service offers a complete solution of filing and all other problems in office equipment. Efficient office equipment, as developed in this new service, combines three essentials: 1, the right kind of equipment for your particular business; 2, its convenient, space-conserving arrangement; and 3, a knowledge of how to use it efficiently and economically.

Globe-Wernicke Service is brought direct to you by specially trained consultants in office equipment. Facts, figures, plans—derived from exhaustive research in actual office conditions—are placed at your disposal, wholly without obligation on your part.

Phone, write, or call on your nearest Globe-Wernicke Dealer—*today!* He will gladly send you his consultant in office equipment, at your convenience. Or, if you prefer, just sign and mail us the coupon at the bottom of this page.

GLOBE-WERNICKE EQUIPMENT

includes

Steel Filing Cabinets
Steel Shelving
Steel Safes and Storage Cabinets
Sectional Bookcases
***Safeguard* Filing System**
Visible Record Service
Miscellaneous Equipment

Descriptive literature on any of these items sent free on request. Use the coupon below.

Globe-Wernicke

OFFICE EQUIPMENT SERVICE

Name .....

Address .....

"Away starboard lifeboat!" sang out the officer-of-the-deck.

"Not a chance," I heard the boatswain snap at my elbow.

He was about right. The man was too close to our counter for us to dare use the screws; and we were lying stern up into the swelling gale, so that there wasn't lee enough to drop one of the whaleboats without swamping her.

"A heaving line!" yelped the quartermaster.

Someone grabbed a coil from the after deck-house and ran to the rail. Two life belts were dropped. The patent life ring was smoking away alongside. But none of them were by the man who was struggling in the icy water.

Just then I noticed Byrd. He had taken off his uniform jacket and kicked out of his shoes. Before I could stop him he was over the lifeline and poised for a dive.

You have to know Dick Byrd to appreciate him in action. He is the mildest-mannered and -looking and -speaking person in everyday life you ever saw. He is nearly always smiling, and his voice is so low that he seems to be confiding in you when he speaks. But when he's about to act, he's absolutely another man.

I caught a picture of him as he balanced there on the waterway's edge that will stick in my mind the rest of my life. He seemed taller and thinner with his coat off. His wiry body was curved a bit forward; his sharp chin was a little in; his lean legs were stiff and straight. His whole expression, eyes, mouth, jaws, and sucked-in cheeks, seemed concentrated on the drowning man out there in the heavy seas.

Before anyone could say a word he was off—off into the air like an arrow, just as the old crock we were on hove up and over toward the poor devil in the ocean. A clean dive he made, and came up not two feet from his man, as at that very moment a big white comber rolled over the both of them, while the rest of us held our breaths.

"He's got him!" screamed an excited sailor as two heads appeared together out of the froth.

He had. We sailed out another life ring at the end of a line. Neatly, Dick took a turn around himself and the other fellow, and we hauled them aboard.

"Sounds simple, I know," concluded the eye-witness, "but you have to feel the icy cut of a spring nor'easter off the Capes and the crazy lurch of a small vessel lying in its trough to know what it means to go over the side after a drowning man half again as heavy as yourself."

THAT little incident brought just *one* of Dick Byrd's citations for heroism. There were two other times that were scarcely recognized as high points in his record even by Dick's closest friends. Floyd Bennett, who went to the Pole with him, told me one:

"We had just started to fly around the Pole, because the Commander's sights showed that we had reached ninety north latitude. All of a sudden, I thought I felt a sort of thud behind me. I couldn't have heard it on account of the roar of the motors. I turned around. The Commander was picking his sextant off the floor of the plane. As I looked, I saw him point to the starboard engine.

"Gee! Two bad breaks at once: Our sextant, which was to take us back to land, smashed; and the starboard engine spitting oil all over the plane!"

"I didn't then half appreciate what it would have meant to try to land in the mass of broken pack ice below us. I knew we would annihilate the plane, but I figured we might walk back. Only after our return did the Commander confess to me that we didn't have a chance in a million of making our way to land had we been forced to come down there. Nor did I realize as fully as he that, without our

"Lest we forget"

©1927 M. L. I. CO.

"It has been in this house fifty years. You can't find another piece like it. This, ladies and gentlemen, is genuine! What am I offered for it? These old treasures are going for a song. Give me a bid."

—While the auctioneer rattles on, some of the neighbors think of the old days of entertainment and open hospitality in that house. They wonder how long the proud and lonely mistress has been fighting off the inevitable. Inside, she hears the auctioneer's words—"genuine", "fifty years in this house", "old treasures" —every word a thrust to her heart.

* * *

BABIES and old people are life's widest contrast and life's closest comparison. The younger they re and the older they are the more they eed our love and care. For the helpless aby it is a sunny world. There is lways someone ready to wait on him, o take care of him. Whether he laughs r whether he cries, the world smiles on im and tries to anticipate his every need.

ut it is a gray, cheerless world for the ired, brave old soul who fails to get the are and waiting on and the affection she ungers for. And charity, when clumsily estowed, stings almost as much as neglect.

A big business man said recently: "I think the saddest sights in the world are the old people whose relatives regard them as burdens—especially when they realize the situation. I think it is fine to build churches and take care of babies and the growing boys and girls, but every dollar I can afford to give away goes to the old people. Sometimes I pay their rent and keep homes together, and sometimes I provide little comforts when their homes are broken up."

While charity takes care of the friendless and helpless, and science is finding out how to prevent physical aches and pains, it remains for "society"—and that means all of us added together—to prevent old age from suffering one of its greatest sorrows—penniless dependence.

The United States and Canada pay bigger wages than other countries. Nearly all their workers earn enough to provide for old age. If they plan ahead, they may have in their years of retirement, not merely bare existence, but real comfort.

Almost every man and woman must face these five great hazards of life:

***Death*—which may come early, before one's dependents have been provided for.**

***Accident*—always sudden and often causing lessened earning power.**

***Sickness*—which may cause want as well as suffering.**

***Unemployment*—which may bring distress to others in addition to the unemployed.**

***Dependent Old Age*—which must seek charity if self-support is no longer possible.**

"Society", through organized effort, with its millions of mutual life insurance policies, has done what no individual could do alone. It has found a way to meet four of the five hazards.

Annuities for old age, protection in case of death, accident or sickness—almost every financial requirement can now be met by insurance. Only one problem is still unsolved—Employment Insurance—and that will follow. The day must come when every family will plan to meet the great hazards of life so that no member of it will face the need of charity.

Thousands of Metropolitan policyholders have asked how much of the family income should be expended for immediate necessities; how much for clothing; how much for food; how much for fuel; how much should be laid aside for protection. Our booklet, "Let Budget Help", answers these questions. A copy will be mailed free on request.

HALEY FISKE, *President*.

METROPOLITAN LIFE INSURANCE COMPANY—NEW YORK

Biggest in the World, More Assets, More Policyholders, More Insurance in force, More new Insurance each year

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

"You can leave *FUNDS* behind, but not your *ABILITY* to handle them"

Create a Life Insurance Trust!

HE had done well, this man of forty-five, who laid his carefully wrapped packet of insurance policies before his attorney. He had added to his life insurance holdings year by year, until he had provided amply for all his family's needs.

But he had NOT provided for the handling of these funds. It had never occurred to him that his wife might lose everything represented by his life insurance policies through unwise investment or fraud.

In many cases, the best way to make certain that your life insurance funds will be wisely used is to create a life insurance trust agreement through your lawyer and a well-established trust company. But first of all make certain, by communicating with your nearest Provident Mutual Representative, that your life insurance estate is adequate to provide for all the protection that your family needs.

Low Rate—Low Cost

Provident Mutual

Life Insurance Company of Philadelphia, Penna.

sextant, we could reach home only if the sun stayed out.

"Did the Commander let me in on his worry? Not on your tintype!" said Bennett. "He just grinned and wrote me a little note: 'Well, Floyd, we did it, old fellow.' Nothing more. And between that grin and the note I *knew* we'd get home all right!"

One more brief sample of his bravery has to be added, if only because the drama of it passed almost unnoticed in the wave of relief that swept the country when the plane, "America," emerged from her awful night aloft last July and landed safely on the north coast of France.

THE big ship had been cruising for nearly nineteen hours without sight of land or sea. For eight hours she had been swimming in an inky void. Only her altimeter enabled her pilot to keep her far above the invisible globe, whirling through space thousands of feet beneath her.

To land with such a heavy machine meant almost sure death to the four brave men aboard it. They could not cheer one another with sprightly banter. The motor's deafening roar prevented that last refuge of doomed explorers. All sat and waited for the end. Their well-nigh exhausted leader, who had not slept for sixty hours, alone held the final decision in his hand. The fuel was nearly gone. Not one faint glimmer of light had come from below to show the way to safety.

There were no heroics. If his men were to die it was proper to give them fair warning. When the time approached to go down, because the gas gauge was nearing zero, Byrd wrote a little note and passed it around. It read: "We are going to crash." It seemed to be the death warrant. Noville has said Byrd smiled that same old smile when he handed the bit of paper across. Providence saw fit to save those four brave men for better things.

Incidentally, Byrd had no illusions when he started that flight. I was with him when, in March, he first inspected the monoplane at the factory of Anthony Fokker.

"Suppose he falls into the water?" I asked the designer.

"He'll sink in thirty minutes."

Dick, standing alongside, never batted an eyelid.

"Suppose he is forced to come down on land in the darkness—can't see the ground?" I went on.

"Probably kill the whole gang," came the brutal reply.

Dick Byrd glanced up. We thought he was going to grasp at a straw; say something about the use of flares, or parachutes, or the lights sure to be around Paris. Surely such subconscious shrinking from the truth would have been permissible in the strongest-hearted warrior. His long artistic forefinger touched his cheek in a vague gesture of interrogation. We waited the question from the silent flier between us. It came:

"When will she be finished?" asked Dick quietly. Nothing more.

Yet, for all these grand acts, he has none of the Napoleonic eccentricities about him. There is a Mrs. Byrd, charming, brown-eyed, unworn and sweet; and four little Byrds, ranging from a tiny goo-ing baby to Richard, Junior, who is very serious, and who privately brags to his boy friends about the things his mother tells

"No appetite . . headaches . . *even my interest in sports was gone*"

A morning's "bag" . . . MR. JOSEPH P. MOORE, *Somerville, Mass.*

Somerville, Mass.

"DUE TO the confining nature of constant work as a calender operator I became run down. I was constipated. My head ached continually. I ate little and slept less. I was so tired and worn out that I lost all my former interest in hunting and other outdoor sports.

"A friend suggested that I try Fleischmann's Yeast. I ate it for three months. Nothing could have improved my condition more! The headaches disappeared entirely. Worry from constipation was at an end and I was again good for any outdoor exertion. My appetite improved, and I slept like a top." *Joseph P. Moore*

"I WAS TROUBLED with constipation and stomach trouble for many years. I thought I could find nothing that would help me. But one day a friend told me what Fleischmann's Yeast had done for him. I started eating three cakes a day and kept it up. As a result I felt better, looked better, and was soon able to eat things that before had caused severe indigestion. Fleischmann's Yeast has literally done wonders for me."

F. A. JETER,
Former Secretary of State, Boise, Idaho

FLEISCHMANN'S YEAST is a fresh corrective food, with the remarkable power to cleanse and stimulate the intestines. It causes easy, natural and *complete* elimination of food wastes. Improves digestion and assimilation. Restores your complexion to the healthy clearness it should have.

Order two or three days' supply of Fleischmann's Yeast at a time from your grocer. Keep it in any cool dry place. And write today for a free copy of the latest booklet on Yeast in the diet. Address Health Research Dept. J-47, The Fleischmann Company, 701 Washington St., New York.

"DURING a particularly busy summer in Chicago I began to lose that soft, clear complexion which is a woman's most valued asset. Sallowness developed. I became haggard and tired. My maid saved the situation. She began to appear at my bedside each morning with a cake of Fleischmann's Yeast dissolved in a glass of milk. Soon I ate my three cakes every day. Before long that tired feeling disappeared, and I regained my soft, clear complexion. I am glad that Fleischmann's Yeast is available and fresh in every city where I play."

SOPHIE TUCKER, *New York City*
(*the "International Singing Comedienne"*)

This easy way to recapture health

Eat three cakes of Fleischmann's Yeast every day, a cake before each meal or between meals. Eat it plain, in small pieces, or drink it dissolved in water—hot or cold—or eat it in any other way you prefer. For stubborn constipation physicians recommend drinking one cake dissolved in a glass of hot water (not scalding) before meals and at bedtime. Train yourself to regular daily habits. As your system is strengthened by eating yeast, you can gradually discontinue dangerous cathartics.

him Daddy does to make a living—to make history is more like it.

As another father of a junior, I asked him one day, parent to parent, what he planned to make of his Dick, Junior.

"A good citizen," came the prompt reply.

Among men he's just as normal, high or low, far and wide. He calls them 'Ted,' and 'Edsel,' and 'Vincent,' when he speaks to men like Roosevelt, Ford, and Astor. The same afternoon he worms his way through the steam-box of a faulty boiler aboard his expedition ship, emerges smutted and dripping with sweat, to snap:

"That's a mess in there, Jim!" Jim is a red-headed fireman.

"Well," demands Jim, in frank exasperation, "what you goin' to do about it, Commander?"

Dick Byrd reaches out the hand that has gripped fingers with kings and queens, presidents and multi-millionaires, and plucks the torn sleeve of his henchman.

"I'm going to do this:" Together their heads, one tousled black and the other a smeary red, bend over a bit of oil-smeared paper. "Cut her down there along the seam, Jim. Shove in a plug, and put on a full test pressure. Get me?"

Jim's white teeth suddenly sparkle through his freckles. "Sure I do. Now, how'd you come to think o' that?"

ONE of Dick Byrd's outstanding traits is his fixity of purpose. He takes some time to make up his mind to a course involving future policy. But, once his mind is made up, he sticks to his course through thick and thin. Neither gain nor fame nor fear can swerve him.

In June a year ago, after his polar success, he had a number of good offers to go into business. His retired pay in the Navy was about three thousand dollars a year. He had no other resources. It was a temptation to capitalize on Fortune's favor in letting him reach the top of the world. Yet—

"Sorry; but I'm not going into business just now," Byrd told them all.

"But we can give you twenty-five thousand dollars a year!" exclaimed the head of a big manufacturing concern.

"But I don't want to go into business," said Byrd.

The would-be patron was hurt and a little angry. He knew how much a retired officer of Byrd's rank got, and he also knew that Byrd had a wife and four children to support.

"Why not?" he demanded.

"Because I still have some exploring to do."

"What on earth is there left to explore?"

"No one has flown from New York to Paris yet. No one has flown over the South Pole. There are millions of square miles on the surface of the earth that no man has ever seen."

His business friend smiled. "And what good, may I ask, is all that going to do humanity?"

Dick Byrd smiled. He can say more in a smile than most men can put into twenty sentences. And he replied: "I wish it would do a thousandth part as much good as Faraday did almost a century ago when he made the discovery of the induction of electric currents. He died, laughed at by the crowd. But electricity runs the world to-day."

Surpassing Its Own World Record

In developing the Pontiac Six, Oakland set out to produce the finest six-cylinder car ever offered in the low-priced field. To that end were employed all the resources available to Oakland as a division of General Motors, and almost three years were spent in development work.

When presented, the car won immediate and nationwide public acceptance, sales during 1926 exceeding the highest previous mark ever attained by a new make of car during its first year.

Yet so pronounced has been the satisfaction of Pontiac Six owners—so emphatic have they been in their praise of Pontiac Six performance, long life and economy, that Pontiac Six sales have already passed the 120,000 mark for 1927!

The tremendous volume of production and sales created by this ever-increasing public enthusiasm has enabled Oakland to offer even greater value in the Pontiac Six, until today it combines six-cylinder performance with Fisher body luxury at the lowest price in history.

Oakland views with justifiable pride the implicit confidence and trust the public has bestowed on Pontiac Six. And Oakland pledges its word that this brilliant car shall always represent supreme value in the low-priced six-cylinder field.

Young Johnnie McGroucher, notorious sleepyhead, decides that Pillsbury pancake morning is no time for dillydallying

The fragrance of Pillsbury's pancakes is an excellent alarm clock. They're easy to make—simply add water or milk to Pillsbury's Pancake Flour, and bake!

Pillsbury's
Pancake Flour
Made by the millers of Pillsbury's Best Flour

Yes, Dick Byrd is an idealist. That is his chief fault, if he has any faults to boast. He is even sentimental. On his flight to the pole he carried a coin from Peary over his heart. Another fault is his overwhelming courtesy.

"Aw, kick 'em out, Dick," we heard a close adviser groan one torrid day last summer when the press was criticizing the Commander for not getting away on his Atlantic flight, and newspaper men were swarming over the camp like flies.

Byrd's face was wan with the sleepless anxiety of weeks. He had lost his best pilot through accident; Lindbergh had taken the cream of public adulation; older men whose opinions he respected were urging him to give up the Atlantic flight as a futile risk of life and property. He was harassed to the point of utter exhaustion. Every nerve in him was crying out for surcease from the pitiless publicity that had raked him and his project fore and aft for weeks. Yet he replied, in his usual soft-spoken way:

"No, let them have the news. It's their job."

Perhaps this sort of thing in a small way accounts for the number of editorials that have been written on the theme, "Byrd—Sportsman."

SPEAKING of his being a sport, I happened to be out at Roosevelt Field the day the "America" was christened. It was a bright June afternoon: the plane stood before its hangar bedecked with flags. There was a brass band and thousands of excited people. Hot-dog men were shrilly crying their wares. Airplanes dipped and zoomed overhead. Byrd was due any moment to appear and open the ceremonies.

A messenger stepped up. "Will you come into the hangar for a moment?"

I found four very grim men in a back room. There was Governor Harry Byrd, of Virginia; Tom Byrd, the other brother, and Grover Whalen, general manager of Mr. Wanamaker's Transoceanic Company, which was backing the flight. A familiar figure stood by a window, shoulders squared, looking out. I recognized Dick Byrd's back.

"Lindbergh has reached Paris," said Governor Byrd.

"*What!*" In the excitement of the "America's" party I had almost forgotten that the rival flier was on his way.

"Yes," interpolated Tom Byrd, "and now Dick says we ought to stop this party."

At this Dick turned. "It's Lindbergh's day," he pleaded. "Why detract from it?"

"But Lindbergh's four thousand miles away!" broke in Grover Whalen. "And we have a huge audience waiting."

Finally, Byrd's arguments were overruled. He was prevailed on to speak on the occasion of the official naming of the plane that was to carry him on the first scientific multi-engined passenger flight from New York to France; a great day in his life, a brilliant feather in his cap.

But his speech was on a wholly different theme: "It is certainly great news we have just heard about Lindbergh," he began. "And my only thought now is about him and his wonderful victory." So it ran, through one of the most eloquent eulogies one man has ever spoken upon the success

One of those rare gifts that really includes the whole family!

CHRISTMAS dinner more luscious than ever . . . . and so much easier to prepare. Savory surprises that just *make* an impromptu party. A bountiful reserve of foods for unexpected guests. These—the very essence of the holiday spirit—made pleasantly possible by a General Electric Refrigerator.

Why not have the supreme satisfaction of a General Electric Refrigerator during the holidays? It's an all-year-round cold storage plant in miniature. It protects food from the killing chill of winter and the bacteria-breeding heat of summer. It makes quantity buying possible.

The General Electric Refrigerator is unusually roomy. Even the smallest size (the one illustrated) has a shelf area of nine square feet—and that's generous for the needs of the average family. Special designing of shelves and freezing chamber have given each model the very greatest food storage space.

This simplified refrigerator hasn't a single belt, fan, drain-pipe or stuffing box. It needs no oiling. It is unusually quiet. All its moving parts are enclosed in a single hermetically sealed casing. There's no machinery under it . . . . none in the basement. It can be plugged into any electric outlet. It is the worthy product of fifteen years of research . . . . and is guaranteed by General Electric.

SUCCESS—
Will You Pay the Price?

IF you are normal, you want the comforts and luxuries which are the by-products of success—a home of your own—a new car—the leisure to read—the means to travel.

You want these things very much.

But—you are keen enough to perceive that experience and facility in handling *routine* work will never get them for you.

What, then, are you doing to gain that *specialized* experience—that *trained* ability—for which business firms are willing to pay real money?

* * *

During the past nineteen years more than 625,000 men have found the answer to that question in home-study training under the LaSalle Problem Method.

Evening after evening, they have seated themselves, to all intents and purposes, at the desks of men in high-salaried positions, and have squarely faced the *problems* of those positions.

Evening after evening, they have been shown the *principles* involved in the solution of such problems—and how those principles are applied by highly successful business houses.

Evening after evening, they have tackled concrete problems, lifted bodily from business life, and under the direction of some of the ablest men in their respective fields *have worked those problems out for themselves.*

That they have been *well rewarded* for their foresight and their earnestness is shown by the fact that during only six months' time as many as 1,248 LaSalle members reported salary increases totaling $1,399,507—*an average increase per man of 89%.*

* * *

Many men, *knowing* what home-study training under the LaSalle Problem Method can do for them, nevertheless prefer to think that there's "nothing in it." That's the excuse they make for their futures.

If you—knowing these facts—are content to drift, you will not profit by reading further.

If on the other hand you have imagination enough to *visualize* your goal—to actually see yourself in a home of your own, enjoying the comforts and luxuries of life—if, in short, you are a man of *purpose*, the coupon below may shorten your journey to success by many years.

Note, please, that the coupon outlines different lines of training and that it will bring you full particulars of the training which appeals to you, together with your copy of that most inspiring book, "Ten Years' Promotion in One"—all without obligation.

If you want success, and are willing to pay the price, ACT!

of another. What made the whole gesture superb was that Lindbergh's success seemed at the time to spell the utter failure of many months of toil and planning on the part of the brave soul who spoke it.

It was not generally known that before Lindbergh hopped off Byrd gave him priceless help in charts and weather data; that before he returned Byrd did everything he decently could to delay the departure of the "America" until the victor could drain his cup of triumph to its dregs.

It was not generally known that Byrd, in secret, coached the navigator of still another entry in the transatlantic air race, knowing full well that he thereby materially reduced his own chances of being first across the ocean.

It was not generally known that when Floyd Bennett was lying a helpless cripple in the hospital, Byrd secretly offered to delay the flight a year if necessary, despite the fact that this meant relinquishing his chance for fame, in order to give his broken pilot a chance to share in the honors. Bennett instantly refused the offer.

It was not generally known that Byrd gave up a chance to make one hundred thousand dollars in connection with the newspaper serial rights to his flight, because the offer did not properly assure financial reward for the three men who accompanied him.

But enough of these little revealing incidents have leaked out for the editor of a great American newspaper to exclaim:

"America is proud of Richard Evelyn Byrd—the Sir Philip Sidney of the air!"

The Misunderstood Mule

(*Continued from page 48*)

mules are unquestionably foolish. For instance, a friend of mine had a mule that didn't want to walk any way except east! You could make him go in another direction, but he never did so willingly. But a mule will never kill himself by breaking into the corn crib; he rarely hurts himself when he runs away; he is wary about rickety bridges; he will stop working when he reaches the limit of his endurance—before he reaches it, in fact; and he'll kick the daylights out of you if you abuse him and are not quick on your feet! Certainly, such a beast is not a fool.

The mule will not often perform for a man's idle pleasure, as a horse will. A horse has endless pride. He will race himself to death, pull himself to death, work himself to death. He will toil for a man, or play for a man. He is altogether admirable. And it isn't a disparagement of the mule to say that he will not do the same things. He's a different critter, with a different personality, a different viewpoint at life, a different, and weird, sire. Mule races are not unknown, but neither are they nationally known. The explanation is not wholly in the mule's lack of speed; it is partly in his lack of any desire to run his legs off merely to please a man. In the realm of frivolities, the mule is an independent cuss.

Some years ago, one of the Southern states had mule races at its annual fair. One big planter had selected his mules

Now—for Christmas
Enjoy the *Magic* of the *Silver Screen*

Home Movies—A New Answer to that Age-Old Question—
"What Shall I Give for Christmas?"

A NEW gift idea! Something different for Christmas. The gift unusual, for one who already "has everything." A family gift that carries with it a thousand thrills—that affords more genuine pleasure, more enjoyment to a greater number of people, than anything else you might give.

No wonder thousands are choosing a Ciné-Kodak for Christmas. For think of the fun—the sport—the personal satisfaction in home movie-making, the new dramatic art!

The Miracle of Movies You Make Yourself

Think of the movies you've always wanted to make—the children, friends, neighbors, outdoor trips. It's so easy now anyone can do it with the assurance of professional results.

Into the marvelous Ciné-Kodak camera weighing only 5 pounds, Eastman Scientists have concentrated every necessity of movie production.

What a triumph in simplicity! No need to focus. No tripod. No grinding crank. Everything is there that you need . . . the non-essentials have been done away with. Just sight the camera, either from waist height or eye level.

Then press the button. A shutter whirls inside, and the film slides swiftly behind the always-ready lens. Instantly every action within the scene before you, every changing sequence of light and shadow, is registered for all time on your film.

After pressing the button, your work is done. No troublesome developing. No bother or fuss. We finish your films at no extra cost, and return them ready to run.

Then with equal ease your films are shown. Switch on your Kodascope projector and instantly the screen becomes alive with action. Crisp and clear you see the pictures you've made. Drama . . . adventure . . . romance . . . in the lives of people you know and children you love parade before your eyes in a swift pattern of light and shadow. "Your own movies!" They are as easy as that to make.

Sight camera from waist or eye level

Weighs but 5 pounds

. . . simplicity itself

Ciné-Kodak embodies Eastman's forty years' experience in devising easy picture-making methods for the amateur. Unbiased by the precedents and prejudices of professional cinema camera design, the men who made "still" photography so easy have now made home movie-making equally simple for you.

To supplement your program, Kodak Cinegraphs—100-foot reels of comedy, drama, travel, may be purchased at $7.50 per reel, and full length feature pictures of famous stars may be rented from any Kodascope Library.

Official United States War Department movies of the World War, filmed in action by the Signal Corps, are also ready for you to run. War Cinegraphs—200 feet per reel—$15 each. Special authentic war thriller, "America Goes Over"—2000 feet—$150.

Now costs only $140

Today a complete outfit, Ciné-Kodak, Kodascope Projector and Screen, may be had for $140.

Give a Ciné-Kodak for Christmas. Thousands of Kodak dealers have it ready to show you. For additional information, mail coupon below.

EASTMAN KODAK CO., Dept. AM-5, Rochester, N. Y.
Please send me, FREE and without obligation, the booklet telling me how I can easily make my own movies.

STATE UNIVERSITY SYSTEM OF FLORIDA

Over a Million Winterfront Users URGE—*Automatic* Motor Protection

at 60° Fahrenheit or Colder

Closes itself when your motor needs heat.

Opens itself when your motor needs cool air

THIS is a vital warning to you. Automotive research has definitely placed the blame for 50 to 75% of all premature motor wear on *cold*—destroyer of motor life and efficiency. And cold doesn't just mean below zero. At 60° Fahrenheit, your motor is in danger.

"Over-choking" warns you!

Coughing, spitting noises and delayed starting are the danger signals. Out comes your "choke"—flooding cold cylinders and cylinder walls with raw gasoline. Glass-like metal surfaces are washed clean of the vital oil film of protection. Vital motor parts are exposed to grinding friction. Excessive dilution follows, fouled spark plugs, high gas consumption, extreme carbonization, corrosion and rapid cylinder wear.

Pines Automatic Winterfront is standard equipment on Packard "8," Pierce-Arrow, Peerless "8," Peerless De Luxe "6," Wills Ste. Claire T-"6."

Winterfront ends these dangers

The radiator on your car was put there to waste heat—thus to prevent overheating in hot weather. An efficient radiator throws away 35 to 40% of the heat of the fuel. At 60° Fahrenheit there is no heat to spare—yet heat-waste continues through the radiator. Obviously, therefore, the only place to efficiently control motor temperature is at the radiator, where heat-waste occurs.

Pines Automatic Winterfront completely covers the radiator and remains closed until the motor is warm enough to operate without damage to vital parts. The shutters then begin to open, *automatically*, allowing the entrance of exactly enough cool air to maintain a scientifically correct temperature.

Important—When your motor stops, Winterfront shutters start to close, and are fully closed while your motor is hot. Thus you are certain always of complete motor protection. There is no chance for dangerous neglect.

With a Winterfront on your car, you "warm-up" in seconds. You lose the dangerous "choke" habit. You enjoy increased gasoline economy—snug warmth inside your car—summer-time smoothness in your motor.

Put on your car in ten minutes

Pines Automatic Winterfront is sold by automobile and accessory dealers everywhere. It is installed in less than ten minutes. *Models for all cars priced $22.50 to $30.00. Special models for Ford, $15.00; Chevrolet, $17.50; Dodge Four, $20.00. Slightly higher prices in the Rocky Mountain area and West—also Canada.* Pines Winterfront Company, 424 North Sacramento Blvd., Chicago.

* * *

The motor car dealer who recommends and sells you a Pines Automatic Winterfront is considering your interests first. Take his advice. Your dealer will supply you.

Pines Automatic Winterfront is the Only Automatic Radiator Shutter on the Market

The only shutter that assures you timely, constant protection against the destroying force of cold.

The only shutter that automatically eliminates the boiling danger—a danger that always exists when the radiator is completely covered by makeshift methods.

You can't forget to operate it. There's nothing to remember. Its results are possible *only* because it is *automatic*.

150

PINES WINTERFRONT—*It's Automatic*

with an eye to their speed. He was eager to win these races. For years he had been buying a few fast mules, and then came his big opportunity. The annual fair was widely advertised, and its mule race was to be a feature. This planter entered two tremendous, slender black mules, and was confident of the victory.

The jockeys were coal-black negroes. A dozen or more mules came up to the starting line, and most of them started. The two black mules of my friend got off to a fine start, and soon were far ahead of the field. Either of them could have won that race easily, and one of them would have won it, too, but for one thing: Their owner had always fed them at a certain time. The race was delayed, and the luncheon hour for these mules had passed when the race began. So, when they were rounding the track about three quarters of the way home, they galloped out of an open gate—both of them—and right on into their stables. The riders did their best to stave off this ridiculous disgrace; but those mules knew it was meal time, and didn't care a hang about such glory as winning a race and getting a garland of roses might bring. Anyway, the garland wouldn't have been made of roses for the winner of a mule race—it probably would have been of onions, jimson weed, or something else of that sort. That's the way of a man with a mule.

And that's the way of a mule with a man! He doesn't respect us, except in a grudging sort of way, and is often alert to chances for playing tricks on us. You can't always tell when he is soldiering and when he isn't. A mule will balk for one man, balk so much that the man sells him at a very low price. (That is, he sells at a low price provided the purchaser finds out about the balking.) And then that same mule may work for the second man willingly, never balking at all!

I know of a man who bought a splendid-looking mule. He came home proudly with his new work animal, and set forth to make his crop. Then, one day, that mule developed a malady the like of which none of the neighbors 'round about had ever seen. The mule's left hind leg would suddenly draw up stiffly under him, and remain rigid. Rubbing it with liniment did no good. Yelling at the mule did no good. That leg had simply petrified! This happened so often that the animal was almost worthless. No one dared start off with him hitched to a wagon. The trick leg might stick up and stay stuck for an hour.

THEN one day a farmer from a good many miles out came into town driving a little plug mule he wanted to trade off.

"What'll you swap me for this mule?" asked the stranger.

"This one," said the owner of the mule with the trick leg, pointing to his handsome animal.

"How much boot'll I have to give?"

"None at all."

The stranger got down from his wagon, looked over the fine mule standing before him, examined his mouth, walked him up and down.

"Say," he asked, "what's the matter with him? Why'll you trade a fine mule like that for mine?"

"Well, take him or leave him," said the other.

Laundry-washed-clothes Guard Health

. . . *because* every step in the laundry process has been planned for complete sterilization as well as cleanliness ❖ For instance, more than 600 gallons of filtered, rain-soft water are used in the numerous sudsy baths and velvety rinses given the average family washing ❖ The ironing process is equally purifying ❖ Delicately adjusted ironing rolls, steam-heated to sterilizing temperatures, purify the fabrics as they smooth ❖ Many articles that require no ironing, are dried and sterilized in heated air currents that speedily destroy any lurking foe to health ❖ Methods vary, of course, according to the types of materials ❖ But in every case the process insures hospital standards of sanitation that definitely guard health ❖ *Visit a modern laundry* ❖ Then you, like millions of other women, will confidently turn to the laundry—for the superior workmanship, amazing economy, and absolute cleanliness that it can give you ❖

The LAUNDRY *does it best*

Preparing the purifying sterilizing bath—exactly as prescribed by noted experts in sanitary science.

How the Laundry Guards Health

Progressive laundryowners now use sterilizing washing formulas that have been evolved for them by the corps of scientists maintained at the Mellon Institute of Industrial Research and the proving station at the American Institute of Laundering. What soaps and sterilizing agents to use—the proper washing, rinsing and drying temperatures—the most sterile starch solutions—all this has been worked out by Institute experts. Truly, the modern laundry is a guardian of health as well as an avenue of escape from washday toil.

No guess methods here! Every basic formula is as carefully balanced as a medical prescription.

Modern laundries offer a variety of services to suit every family need. All-ironed work, partially-ironed work, and work which returns clothes damp for ironing, are but a few of the many *individualized* services available at laundries today. Phone a modern laundry now—let them help you decide which service is best suited to your needs.

Lilac prevents skin blemishes

Tiny nicks in shaving

threaten your skin!

Notice the small skin ridges on the tips of your fingers . . . The same kind of ridges are found in the skin of your face.

Every time you shave, these skin ridges are scraped or nicked by your razor. Dust and germs find the nicks, then little infections develop.

To prevent this use Pinaud's Lilac after each shave! It antiseptically protects every break in the skin, prevents skin blemishes. And the same wonderful ingredients, newly processed, make Lilac blander than ever!

Buy Pinaud's Lilac at any drug or department store. The signature of Ed. Pinaud in red is on the bottle. Pinaud, Paris, New York.

PINAUD'S LILAC

[*Lilas de France*]

The stranger took him. He left his puny plug there in the lot, and drove off behind the big, strong mule with the trick leg. Then all those who had witnessed the trade began to laugh.

"Gosh! won't he cuss when that leg flies up!" they exclaimed.

Weeks went by. In fact, the whole plowing and working season went by, and then the farmer from afar came again to town, and looked up the first owner of the trick-leg mule.

"Look here," he began, "tell me what *was* the matter with that mule you swapped to me. He's the finest animal I ever had on the farm."

"His left hind leg all right?" asked the mule's one-time owner.

"Sound as a dollar."

"Well, I'll be—"

IT IS commonly believed that, pound for pound, a mule can out-pull a horse. Yet when Wayne Dinsmore, secretary of the Horse Association of America, put on a pulling contest in Kansas City, a team of horses won from a team of mules. This doesn't prove anything conclusively, of course, except that this particular pair of horses out-pulled this particular pair of mules in that test.

A dynamometer was used to record exactly the pulling power of the teams. The horses weighed less than the mules; but pulled the same number of pounds. The two teams were in the same physical condition, and in every other way the test was fair, so everyone thought.

That is, everyone except the army sergeant who managed the pair of army mules in the competition with the horses. When his mules succeeded in pulling no more than the horses had pulled, even though they were heavier, it was announced to the crowd that the horses had won. Immediately the sergeant came over to Mr. Dinsmore.

"Say, that test wasn't fair!" he protested.

"Why not?" asked Mr. Dinsmore.

"Well, there're ladies present," complained the mule-skinner.

"What's that got to do with the strength of your mules?"

"With ladies present," explained the sergeant, "I couldn't talk to them mules the way they're used to. They didn't think I meant it when I told 'em to go to it, because I had to use lady talk to 'em."

And while the official result of the test must stand, the sergeant may have been right at that! Some mules expect language befitting their low station in biology.

Yes, they are a misunderstood lot, these interesting quadrupeds. Perhaps this is because they are not understandable. They are not natural, which may make them a difficult problem for those of us who are not psycho-analysts. They are philosophical, industrious, suspicious, sober, a combination of characteristics that has most of us guessing. They had rather work for you than play for you; they are not thrilling and are unthrillable.

They have courage, ability, strength, health—qualities which we all admire. But they rarely, if ever, inspire affection. I have never known a white man who actually loved his mule. They perform heroic deeds for us, and we make a jest of it. I once rode a mule through a swollen creek, rode him because my horse was afraid of the torrent.

The mule carried me faithfully to the other shore; but on his way he began to wave his tail in a rotary motion, half under water, half out of water. A mule doesn't have much hair in his tail, but this one had enough to slap me in the back a hundred times and drench me. I was not astride him in the usual way, but was kneeling on his hind quarters in an effort to keep dry. And now when I tell of that incident, I fail to mention the mule's heroism, but speak instead of his soggy tail!

There are nearly six million mules in the United States, and that number will increase steadily, so horsemen and mule men assure me. For those who work domestic animals are fast learning that a mule is a "fool-proof tractor." He hasn't any false pride. It is hard to hurt his feelings or his hide. He likes the company of his fellows, and likes to follow a leader, so he is an ideal animal for a big hitch. He can stand up under great privation, either in work or in shipment. He doesn't demand any form of recreation, except a place to roll; he is inordinately fond of rolling, and almost any time or any place will do, provided the place isn't too muddy. He is often an easy rider, and is sure-footed.

Officially, mules are divided into five classes: draft, farm, sugar, cotton, and mining mules. Unofficially, they are divided as follows: plug mule, jar-head, fool mule, mule, and good mule. The last class is by far the most numerous. They range from twelve to seventeen and a half hands high, and from six hundred to sixteen hundred pounds, with variations either way for exceptional animals. They may be worked from the age of three years, but do not reach maturity until five, and should not be overtaxed before maturity. Mare mules are generally preferred to horse mules.

"WHEN you see a balky mule," a wise stockman said to me, "you are probably looking at one that was overworked before he was mature. And when you see one that kicks, you can bet that he has been abused. A well-treated mule is as gentle as a well-treated horse. He has more peculiarities, but they don't matter. And a mule is an awful good judge of human nature. He seems to know right off what sort of fellow you are, and he seems to have a way of signaling to other mules with his ears, maybe tipping them off what to expect of you, or of him!"

An unspectacular beast of burden is the mule, unstylish, unsung, and unappreciated. Someone, a long time ago, gave his hind legs a bad name, and now, whenever a mule kicks, the whole county hears about it. A dead mule was being hauled on a cart from the streets of a Southern city. He had died in a cramped condition, and had remained that way. But a jolt of the cart, or something, loosed his taut muscles; his hind legs flew out, and knocked the driver from his seat! That item of news was widely printed. Such is the fruit of a bad, even though undeserved, reputation!

None the less, mules, as General Washington said, are "a very excellent race of animals!"

Ask Any Father

(*Continued from page 23*)

He also cultivated an enormous raspberry garden and went in for several hives of bees. Townspeople driving past the place on many an afternoon beheld his solitary figure at labor off in a corner of his premises—a tallish, dignified, slow-moving man, who seemed always communing with himself, and who came into town only to pay monthly bills or to vote. If he went about the country he drove a sorrel mare hitched to a piano-box buggy, the rig possessing much individuality because the mare never required a mouth-bit, being guided by reins hitched to a bridle that was little more than a halter.

People would jerk thumbs at him and explain to strangers, "Oh, that's Calvin Peck! He retired pretty well fixed; but his boy got into some sort of scrape a few years back and left home. Some say the kid's dead, but no one knows for certain. Want to buy a good setter? He'll sell you one cheap. And the more you like dogs, the cheaper you'll get one!"

THEN came a morning when the rural free delivery buggy drove up to the aluminum-painted post box out front of the Peck house, and when Calvin came in from the south lot for his dinner the Widow Thurston called attention to his letters.

Calvin put his steel spectacles over his ears, sorted out his farm, bee, and dog papers, finally opened a long envelope to draw out a letter sheet with—

The Crampton Corporation Ships
Crampton, N. J.

lithographed across the top.

Through the open door from the kitchen the housekeeper caught sight of him, standing a long time by one of the sitting-room windows. The sheet hung listlessly from his hand.

"What's the matter?" she demanded.

"Matter?" he said thickly. "Nothing special, only . . . I've heard from David!"

The woman took the sheet he proffered. Salient sentences stood out in high light—

. . . Accidentally I met Bill Stevens from the old home town the other day, Dad, down here to get a job with our engineers . . . he told me Mickey recovered from our fight. . . that I ran off for nothing. Well, that's that! . . . I never let on to you where I went, because the wrong people might read the letter and lug me back. Besides, I got married and had a kid of my own. You know how it is. . . . You've been a grandpop for quite a spell and never knew it. . . .

. . . after a fashion I've forged ahead a bit. I landed with this company and they've been good to me, though of course it wasn't from charity. . . . I took one of those correspondence school courses nights, and last fall they made me hull boss. . . . I know we don't seem to have a whole lot in common, except that we're son and father, but I'd like to see you. . . . As I can't spare time off the job just now, and you may be lonely up there, why not come down and visit us a spell and see the kid? . . .

Calvin went.

Crampton was the ugliest of ugly manufacturing towns sprawled along the mud-flat Jersey shore. Refuse and ashheaps littered its streets; low-browed, big-bodied, small-headed men and squalling children lived in tawdry, unpainted frame houses kept by shapeless women.

The yards where Calvin found his boy were a pandemonium of profanity, shriekings, rivetings, whistlings, scrappage, and bewildering clutter. When the father recognized his son, his sight wavered. . . .

In physique and culture the boy, man-grown, resembled one of those allegorical human subjects which mural painters depict on the ceilings of labor temples. His jaw was heavy, his mouth was large, he needed a hair-cut and a shave. Denim clothes were befouled with oil, muck, and creosote paint; he wore a thin cambric cap twisted over one ear. Before greeting his father he rubbed a leathern paw on the leg of his overalls.

"Hello, Dad," he worded it, "how's every little old thing up at Paris?" And he grinned.

It was the same friendly, good-natured grin of the two-fisted youngster, back over the years, who had scoffed at a walk over New England mountains.

"Boy, boy!" cried the father brokenly. He followed his son to a small shanty office, with foul-odored bilge lapping beneath its pilings.

"Make yourself at home, Dad. We're slidin' the hull of the 'Gigantic' into the water to-morrow. When I see the bunch have got enough work to keep 'em sweatin,' I'll be back, and we'll chin!"

David kicked an unclean cuspidor aside and shoved out a broken chair for his father. Then almost at once he was gone, out in the cluttered turmoil.

The stench of the bilge and coal-reek nauseated Calvin at first. His sensibilities resented the crudities, the ugliness, the brutality, the labor-lust that hammered and dinned profits, profits, profits! Back over the years they took him, to the mill incarnation he had tried to outgrow—that he had wanted his boy to rise above, even as he had always longed to get above it. Yet here was the son, a man at last, and immersed in ten thousand times the things that were Cæsar's!

Calvin studied his sleeping grandson's face that night—toylike hands clasped together, breath coming gently from tiny lungs—and many years dissolved in a moment. David entered while the ex-superintendent of the Thorne Knitting Mills was living another scene, upon another night, beside another crib.

"GONNA make a ship-builder of him, Dad. That's he-man's work!"

"Mebbe, son," Calvin answered huskily. Then, with a trace of whimsy, "And he'll probably show you that God's intended him for a preacher, or a writer, or an artist!"

So this was the reunion: David gone back to his labor to see that all was progressing satisfactorily for the morrow's launching, the wisp of a woman David had married departed with women friends to a movie, the baby in charge of a nurse, and old Calvin left with his dreams of What He Had Hoped Would Be.

One year and twenty months elapsed before old Calvin was shown the light.

A Hint to Those with Pipe-Smokers on Christmas Lists

The following letter may prove to be a Christmas tip to those who have pipe-smokers on their Christmas lists:

Carney's Point, N. J.
January 7, 1927

Larus & Bro. Co.,
Richmond, Va.
Gentlemen:

My son noticed your advertisement in a magazine. He sent for the sample in my name, and when the sample of Edgeworth arrived I thought perhaps some friend had sent you my name.

The boy questioned me several times whether I liked the new pipe tobacco. When I told him I liked it better than any I had ever used, he surprised me by giving me a one-pound box for Christmas.

I might say that I do not hear any complaint from my wife about any more vile pipes.

Very truly yours,
James L. Vaughan

The two favorite gift sizes of Edgeworth are the 16-ounce glass humidor jar and the 8-ounce tin. Both are provided at Christmas time with appropriate wrappings. Each size contains Edgeworth Ready-Rubbed, and each is packed in a good-looking decorated gift carton printed in colors. Prices—$1.65 for the 16-ounce jar. The 8-ounce tins are 75c each.

Please ask your tobacco dealer for the Edgeworth Christmas packages. If he will not supply you, we gladly offer the following service to you:

Send us $1.65 for each 16-ounce jar, and 75c for each 8-ounce tin to be shipped; also a list of the names and addresses of those you wish to remember, with your personal greeting card for each friend.

We will gladly attend to sending the Christmas Edgeworth to your friends, all delivery charges prepaid.

Personal: Perhaps you yourself are not acquainted with Edgeworth. If so, send your name and address to Larus & Brother Company, 3 South 21st Street, Richmond, Va. We shall be glad to send you free samples of Edgeworth Plug Slice and Edgeworth Ready-Rubbed.

Both Edgeworth Plug Slice and Edgeworth Ready-Rubbed are packed in small, pocket-size packages, in handsome humidors, holding a pound, and also in several handy in-between sizes.

To Retail Tobacco Merchants: If your jobber cannot supply you with Edgeworth Larus & Brother Company will gladly send you prepaid by parcel post a one- or two-dozen carton of any size of Edgeworth Plug Slice or Edgeworth Ready-Rubbed for the same price you would pay the jobber.

[*On your radio—tune in on WRVA, Richmond, Va. —the Edgeworth Station. Wave length (254. 1meters) 1180 kilocycles*]

Heed the warning of "*Coated Tongue*"

A COATED tongue, and the unpleasant breath that usually goes with it, is Nature's unfailing signal of trouble ahead.

It tells you of upset bodily processes. It warns you of intestinal stoppage—cause of many, many ills.

Thousands of men and women who used to suffer frequently from headaches and from the other enervating effects of stoppage, now feel and look their best by taking this simple precaution:—

Each morning, these people look at the tell-tale tongue. If it is white and furry, they nip trouble in the bud by taking Sal Hepatica, the approved effervescent saline.

Sal Hepatica clears the intestines of waste products—*usually within a half hour.* It promotes natural elimination by releasing the water secreted in the intestines.

Sal Hepatica is beneficial, too, in the treatment of indigestion, poor complexion, auto-intoxication, and many other ills traceable to stoppage.

For Sal Hepatica contains the same health-giving salines as the European spas. Like these famous waters, Sal Hepatica keeps you internally clean and sweeps away the insidious poisons of waste.

Dissolved in a glassful of water, Sal Hepatica makes a sparkling, refreshing drink.

Keep free from headaches, from dull and draggy days. Look at your tongue every morning. Whenever it is coated—whenever elimination is sluggish, take Sal Hepatica at once.

Send for the free booklet which explains more fully how Sal Hepatica corrects intestinal stoppage and relieves other ills.

Please address BRISTOL-MYERS CO.
Dept. L-127, 71 West St., N. Y. C.

Sal Hepatica

© 1927

It was a gray afternoon in November. Calvin had come down again from Vermont to be with his son's family for the Thanksgiving holiday. He unlocked the mooring chains of David's powerful launch, threw them aside, climbed aboard, started the doughty engine and headed away from the nondescript dock. Down along the Jersey shore and out into incipient winter's dusk he steered.

He did not know where he was going. Open reaches of ocean called him. Speaking solitudes of salty horizons tuned in with long, long thoughts of youth and young manhood. The dull, sunless sky, too, held a melancholy relationship with the Grail of Disappointment, in quest of which, he felt, he had spent his years.

He felt that he had neither part nor place in the grubbing, sweating, shrieking world of crass commercialism which claimed and satisfied his boy. And the afternoon softened into leaden gray. Mauve shadows of twilight descended. The sun came out for a lingering instant, a mammoth blob of molten scarlet hung behind bars of leaden gray. Then it was gone. The air grew colder. There were wisps of snow in the sea wind blowing landward.

Calvin silenced his engine. The launch rocked groggily and the lone man rocked with it. Like human existence, that rocking.

A ship was coming up the bay in chill November dusk, an ocean liner in from Europe, striving to make port before the lashing of the off-shore storm.

Earlier that afternoon, Calvin had seen the health officer's tug head down toward Quarantine, as he had idled with his pipe along the docks. Now the vessel had picked up doctor and pilot. She would come close to the rocking launch, but not so close that the little craft would be in danger of collision. Calvin fell to watching the ship as she made the harbor's shelter.

She was a mammoth boat, and as she drew nearer the size of her magnified. What a sight to catch on canvas, that raw November night as she neared the land, dull black sides ice-coated by the freezing outer seas! Old Calvin was too much the artist not to grasp the cold, huge beauty of her. . . .

Bellowing hoarsely for smaller craft to clear the way, on she came up the harbor with funnels billowing pitchy smoke, whistles shrieking, tugs striving to keep up and render puny aid, streams of sewage spewing from her mighty vitals, thunderous chutes disgorging sacks of fast oceanic mail.

"OH, YOU beautiful monster!" cried the old man thickly. "If I could only paint you . . . catch the glory and power of you! If I could only paint your virility!"

But even his thoughts were smothered by the ear-piercing sirens, the mad foaming of the cleft waters at her prow. Beside her the launch was becoming an eggshell, accentuating the liner's mountainous tonnage.

Through the gales of wintry seas she had smashed her pathway. Through winds that shrieked and waters that arose like granite masses to annihilate her, she had rammed a defiant track. She had mocked at the sleet-lashed ocean, and her fight-loving heart had thrilled with the combat. Now she was nearing land. She was coming into port.

The liner was almost abreast of old Calvin now. Up there—far, far up above the puny launch rocking in the whitecaps—up within her heroic iron sides, carried as faithfully and as tenderly as in the arms of a mighty mother, were men and women and little children. There were parents coming from the Old World to find sons and daughters in the New. Wives were soon to join husbands. Sweethearts were again to know the embrace of lovers' arms.

Babies had played on her saloon floors through the monotonous hours of that comfortable voyage—without thought or care of the mighty battle that ship was waging to get them safely though. Five thousand human souls were aboard this towering, victorious hulk of steel and snow and ice—warm, well-fed, poignantly anticipant of reunions to take place shortly at the dock.

LIKE a thing alive, she rode majestically, triumphantly up the harbor, her speed slowly dying. Grimly, with adamant beauty, the glory of annihilating strength tempered with infinite tenderness, she seemed to acclaim:

"I have brought them to you. Over the reaches of three thousand miles of water I have carried them: your parents, your children, your lovers. I have them here for you in safety. But I want no credit. Such is my life, my business, my privilege. For this was I created."

Mistress of distance, buffeted but invincible, confident of playing the same gruff game with death times beyond recount—of holding resolutely to her course and making in the Twilight the harbor for which she had started in the Morning of her voyage—the panting, spewing, unconquerable leviathan came nearer and nearer old Calvin's launch. Lights streamed from five decks and two thousand porthole windows. Groups of sailors raced backward and forward, unleashing her winches, prying up her hatches, attending to the details of a voyage that was nearly done. More tooting, eager tugs, hungry for spoils, churned forward to offer their assistance. A seething searchlight played on her bow from an offstanding revenue cutter. . . .

Far down on the left, just out of harm's way, a little, old, gray-haired mill superintendent in a rocking motor-boat raised his lackluster eyes to that bow. He uttered a cry which no man heard. For in the glory brilliance of two more searchlights, great gold letters stood out like scintillating beacons—

The Gigantic

"Why, that's a Crampton boat!" old Calvin gasped. "It's the ship they launched the day after I got here. Merciful God! . . . That's my boy's ship! . . . my little son Davy. *He made it!*"

It was David's boat. The little son who had chosen to experiment with water-wheels instead of walking over the hills looking at butterflies—he had done his part toward creating this mighty thing that was rolling past the throat-choked father now, as high as the stars, vibrating all that harbor world. David the shipbuilder, the man-master . . . his little sleeping baby-son of the New England

For the Glad Holiday Time

—for the merry season when every one should be happy and care-free there is especial advantage in having the car equipped with Firestone Gum-Dipped Balloons.

They give the woman at the wheel a sense of confidence that leaves her mind free for the holiday joys. The non-skid tread makes driving secure and safe, even though highways are slushy and boulevards slippery. Gum-Dipping gives great strength and resilience, making Firestone Balloon Tires practically proof against tire trouble. By this process the cords are saturated and impregnated with rubber down to the smallest fiber of every cord, protecting the tire against the destructive effects of friction. Experience proves that Gum-Dipped Balloons do, actually, deliver many thousands more miles of reliable wear with supreme ease of riding.

To get ready for the coming festivities and enjoy every motoring hour, see the Firestone Dealer—today. He is equipped to give you first-hand information and assistance. He will gladly explain to you why Gum-Dipped Tires are "Better" and why you should have them on your car.

Unforgetable GIFTS!

For gifts that are lived with, and loved,—gifts that call you to mind daily in the joy they add to living—choose home furnishings. You can select so easily now—and besides, obtain gifts of rare design, unique workmanship; occasional pieces or entire suites. For now

Through Your Local Dealer *and* *Peck & Hills*

you can easily obtain distinctive furniture and floor coverings. The ideal way to choose the perfect gift is to visit our nearest wholesale display. Here you will find row upon row of furniture, rugs and carpets, art objects. Your local furniture dealer will give you a signed Card of Introduction which admits you. If you cannot visit, he will show you our complete catalog.

If he cannot serve you, write us for names of dealers near you who can. Address nearest house— ***Peck & Hills Furniture Company, Boston, New York, Philadelphia, Chicago, Denver, Los Angeles, San Francisco, Oakland, Portland, Tacoma, Spokane, Seattle.***

Wholesale Furniture and Floor Coverings. We sell and deliver through retail dealers only.

FREE BOOKLET explains care of home furnishings and money-saving plan. Write for Booklet A-12.

The Peck & Hills oval sign on your dealer's window is added assurance of service and satisfaction.

COAST TO COAST SERVICE

sitting-room crib, three decades in the past. His boy David had become as the god who had fashioned this abysmal thing and breathed into its nostrils the throbbing breath of life.

And this was the anthem and the glory which welled louder and higher in old Calvin's artist-heart until it pierced the canopy of harbor clouds and reached the stars.

On that far-off night the bereaved young father had studied his sleeping child, and wondered: "What will you become when you have grown a man, little chap? What losses or victories will come to you on the world's great battlefield of labor?"

Would that the father could have heard a response: "I'll build mighty ocean liners that will fight a track from continent to continent, connecting the hemispheres, bridging the worlds! Iron and steel, and science and brawn, beneath my shaping, shall mock at the mightiest forces of nature. The world will draw closer together, human life become a finer, better, higher thing because of this industry to which I shall sell my life and my soul!"

As the stupendous creation of his boy—and a thousand other men's boys—floated onward and up to her dock, Calvin read, as on tablets of bronze:

"*The parent who knows he has done his best may leave the rest to the Father of fathers!*"

A glory light flooded into the secret recesses of Calvin Peck's soul and lifted him with that realization up into the hill of the Lord, wherein is thanksgiving and a plenteous peace.

Do You Need Brains to Get Ahead in Business?

(*Continued from page 19*)

individuals are not necessarily of the same class. Rather are they of similar types, of two general types which are peculiar more or less to all classes. The college man is predominant in the category simply because the college purposely sets out to produce these types, and also because these types are drawn naturally to college. It must follow, therefore, that college training in itself is often the first reason for the failure of a man in business, though it need not be.

BEFORE going into this in more detail, let us take a look at the picture which every business must face: In this country there are perhaps two million business houses. Approximately twenty-five thousand of these every year are actually reported as failing. The latter figure does not include a vast number of businesses which liquidate and pass out of existence without report; nor does it include another vast number which pass from hand to hand without ever getting established in the profit-making class.

Some time ago, 1,068 hardware dealers whose retail stores are scattered throughout the country got together and compared intimate figures of their businesses. These were fairly large, fairly progressive retailers whose sales volumes varied from $25,000 to $100,000 a year. They found that only 63 per cent of the selected 1,068 were making money, despite the fact that hardware stores probably are the most successful of all retail ventures.

At this moment I can place my hand on no authoritative data showing just what percentage of those who start into business make a failure of it, or at least fail to make it profitable beyond a bare living. That percentage, however, is astonishingly high. It is easily seventy-five per cent, an almost unbelievable figure. Just to satisfy yourself on this point, try to recall twelve contiguous business houses in the shopping center of your town twenty-five years ago. How many of the original twelve are left? How many others have come and gone in the interim?

Business constantly faces this picture. A great variety of causes might be cited as specific reasons for it, but if you were to sift and classify these into general reasons you would find you had only a handful, not more than seven in all. And *one* of the seven you would discover to reoccur so often as almost to balance all the others together. That reason is lack of business experience and preparation; a lack, if you please, of *business education!*

Our popular conception of the educated man is that of a man of wide knowledge gained from books. A mechanic may be a wizard with tools and machines, but unless he also is book-trained we do not call him "educated." Additional to his manual skill, the mechanic may be admirably grounded in the principles of business and have a wide knowledge of men, markets, and sources of supply, gained from a slow and arduous experience in a factory. Still, unless he knows books, we regard him as "uneducated."

In a line, knowledge gained from books popularly labels a man as educated and brainy, while lack of book knowledge labels him as uneducated and uncultured. The mechanic whose only school has been experience may rise to the head of a vast business and change the complexion of a whole industry, and yet we will hesitate to credit him with "education." We will grant that he is "shrewd," with an "instinct" for business, and perhaps "lucky." But if asked to name a brilliant man, our thoughts will turn from him to scientists, legal lights, and authors of weighty books. How can an uneducated former mechanic be brilliant?

This is the popular view. It is *not* the view of business! Degrees, diplomas and famous writings may be the symbols of one kind of education, but they are not the symbols of business education, on which business captains must rise or fall.

I HAVE in mind two men who, as graduates of the rival schools of practical business and college, furnish us with an interesting contrast. Both of them are alive and in business, for which reason I will disguise their names and the details of their cases. These two men are about the same age, and, as boys, attended the same

for

Christmas

ARE you searching for a helpful, useful, practical Christmas present—for son or daughter, for brother or sister, for wife or husband, for dearest friend?

Here it is! The Remington Portable is a gift that always inspires gratitude, for it provides its owner with the modern, time-saving way to write.

Remember that the Remington Portable is the world's smallest and lightest typewriter with standard keyboard—weighs only 8½ pounds net and fits in a case only four inches high. But it is complete in every feature—strong and durable—simple and easy to operate—the recognized leader—in sales and popularity.

Terms as low as $5 monthly. Sold by Remington branches and dealers everywhere. Send for our booklet "For You—For Everybody." Address Dept. 59, Remington Typewriter Company, Division of Remington Rand, 374 Broadway, New York.

Remington Portable

OVER FOUR MILLION REMINGTON TYPEWRITERS BUILT AND SOLD

How to make tough beards go limp!

HOW you hate those three to five minutes of laborious rubbing in of the lather! Ever see yourself smile in the mirror while doing it?

And even then, the tough old beard fights back. You feel it in the little pains as the razor ploughs and scrapes across your tender jowl.

It's all unnecessary.

Men! You can cut your shaving time in half and enjoy the smoothest, softest shave of your life by the simple process of rubbing Hinds Honey & Almond Cream into your beard *before you lather up.*

Rub it in generously — two or three seconds is enough. Lather right over it while your skin is still wet. Then feel the delicious smooth swish of your razor as it reaps its soft harvest from a beard that's really limp.

After the skin is dry, rub in just a little more Hinds Cream. Your skin will then feel soft and relaxed for the whole day.

Your wife has Hinds Cream. Use hers. You'll want a bottle for your own, too. It's sold wherever toilet goods are sold. Or clip the coupon below for a sample bottle.

Made by A. S. HINDS CO., *a division of* Lehn & Fink Products Company
In Canada: A. S. Hinds Co. (Canada) Limited. *Distributed by* Lehn & Fink (Canada) Limited

A word to the wives

The surest preliminary to a real smile from the "hub" at the breakfast table is a quick, smooth shave. Lend him your bottle of Hinds Cream. And buy him a bottle, too, to stand beside his soap and razor.

BEFORE AND AFTER SHAVING

HINDS *Honey & Almond* CREAM

REG. U. S. PAT. OFF.

LEHN & FINK, Inc., *Sole Distributors*
Dept. 887, Bloomfield, N. J.
For years I've been fighting my beard. Send me that sample bottle of Hinds Cream.

public school. Ramsey stood near the head of his class; Boggs was never far from the foot of his.

Ramsey finished high school and went on to college, graduating with honors. He spent a year in specializing in finance and commerce, another year in travel, and returned home to enter business with glowing prospects. For a time he sold bonds, but not with especial success. Then he got into advertising as a solicitor, but again only did fairly well. One day, dropping into a hardware store to make a purchase, he bumped into his old schoolmate, Boggs.

It was not the biggest store in town, but it had a prosperous air.

"Well, well!" greeted Ramsay. "Selling hardware, eh? How's it going?"

Boggs said it was going fine. He had already leased the storeroom adjoining, so that he would be able to double his space in the fall. Yes; he was the owner of the store.

In amazement Ramsey heard Boggs's story. The latter had quit school at fourteen when necessity at home had compelled him to go to work in a tool factory. From errand boy he had risen to the shipping department, and from that to a wholesale hardware house, where he had seen opportunity in the retail end of the hardware business. Two years of experience in retail selling, with nights spent in a business school, and he had opened his store in conjunction with a partner. At the end of the first year he had bought out the partner. This, the fourth year, he expected to net twenty thousand.

Ramsey walked home with teeth gripped and his head down. "So that's Benny Boggs," he thought. "The dumbest kid in our class, and he's making four times what I am!"

A YEAR later, upon the death of his father, Ramsey went into the hardware business. He knew no more about hardware than Boggs did about Greek; but, "If Boggs can do it, I can too!" he told himself. "If he's smart enough to make twenty thousand dollars, I'm smart enough to make one hundred thousand dollars."

Ramsey had capital, brains, and education. Yet to-day he is back in the bond business, selling bonds. His hardware store lasted less than two years.

The first reason for his failure is simply a matter of mathematics. During the nine years that he was gaining culture in books, Boggs was gaining culture in the art of selling merchandise at a profit. Add to those nine years the two years Ramsey spent selling bonds, and three years spent in advertising. During all of these fourteen years he had had absolutely nothing to do with selling hardware.

Boggs, on the other hand, since fourteen years of age had *lived* in the hardware business. He knew the factory, the wholesale house, and had clerked in a store. Perhaps his mind was slow, but necessity had driven it on. He had married early, staking all on what he could earn. A child had come, and Boggs of the single-track mind, with a single objective ahead and a *single interest*, had dug for fortune with every ounce of will that he possessed.

The second reason Ramsey failed, he could charge both to his more active mind and to the university which had undertaken to train that mind. He left college with a knowledge of the arts, of the

Digitized by Google
Original from STATE UNIVERSITY SYSTEM OF FLORIDA

nces, of higher mathematics, of his-
y, languages, and also of sports and
al life. His mind, through books, had
ed the earth and the heavens, plumbed
seas and delved a million years into
past. He had left school with a thou-
d interests in his head, with a taste for
y and companionship, with a fraternity
ton and a club membership card.
But with all of Ramsey's splendid equip-
nt for *life* and the enjoyment of it, he
nt into business lacking the *one* qualifi-
ion on which business is adamant. He
l no more practical knowledge—that
first-hand business knowledge—than a
p post. The college had taught him
v to live, but it had not taught him to
ke money. In the world of business,
ggs was the educated man and Ramsey
s not.

ONICALLY, as the third reason for his
ailure, Ramsey found, to his dismay,
t his college training actually had made
difficult for him to get that one vital
ng which he lacked—business education.
e "broadening" he had undergone made
agony for him to squeeze himself into
humdrum, narrow channel of the retail
re routine. He had too many cherished
erests, too many friends, too many de-
nds upon his time which were outside
business. He had been taught that play
s important as work, and golf stole time
t belonged to his counters.
Boggs had never learned to play, so
n't miss it. His vacation was spent
a retail hardware dealers' convention
l in visiting five stores in other cities.
family alone divided his time with
business, and that family was his in-
tive to go on.
Reason number four for Ramsey's fail-
was that he under-rated Boggs him-
, a mistake which too many of us make
estimating the worth of the business-
icated man. He could not forget that
ggs had been the boy who always stood
r the foot of his class, and, in conse-
ence, he did not see the change that the
rs had made in him. The character of
ggs, the merchant, was not the character
Benny Boggs, the boy.
Boggs had stern stuff in him, Ramsey
uld have seen, or Boggs would not have
n above his first job in the factory. He
l met and stood in line with men down
re, most of whom were still there,
ng just what they had been doing when
left them. He had been tempered to
el hardness by self-denial, for without
ital he had created capital out of dol-
s that were both earned and saved. He
l gone through the fires of credit-
ablishment, bad bills, bad customers,
l bad advisers, and had emerged stronger
en other weaker ones had quit.
For every fifty men in business to-day
average of college men probably is not
her than one. That one must beat the
t of the other forty-nine, and those
t are the leaders who have risen from
the mass by sheer merit and driving
ce. Their education has been special
l direct; they are of a superior order,
e they would not have topped their
ows. Ramsey failed to see that Boggs
s one of these.
n Ramsey, then, we have one type pro-
ced by college training. This type has
n trained for life, which is broad; and
finds business, according to its notion,

"—when the air is blue with smoke"

Where men smoke steadily

Take a peep into almost any business conference. You'll find heated arguments. Much smoking. Tensed nerves.

And something else today—you'll find men eating Life Savers between smokes.

They take quickly to this wholesome habit. One man notices another and soon all have discovered this new way of getting more pleasure out of smoking.

* * *

More and more smokers are doing the same thing. We wondered if you knew this about Life Savers, those little candy mints with the hole; how they freshen your mouth between smokes, soothe your nerves and make the next smoke taste so much better.

It's a fact: Life Savers easily double your smoke enjoyment. Their wonderful aromatic flavors freshen your mouth like a good drink of water when you're really thirsty—and steady your nerves for work or play. Once you try them this way between smokes, you'll always have a package handy.

Six popular flavors: Pep-O-Mint, Wint-O-Green, Cinn-O-Mon, Lic-O-Rice, Cl-O-Ve and Vi-O-Let. 5 cents a package.

P. S.
Have you tried LIFE SAVER FRUIT DROPS? Three refreshing flavors—Orange, Lemon and Lime.

Eat a few Life Savers between smokes

Wanted Home Women *to Decorate* Giftwares

No Special Ability Needed

This is the wonderfully interesting occupation that it is now possible for you to enter through the instruction of Fireside Industries. The work pays exceptionally well. There is no canvassing, no monotonous drudgery. Many say they never dreamed that such a wonderful way of earning money at home existed. New system of instruction devised by M. Gabriel Andre Petit makes the work so easy that almost anyone can do it.

Fascinating Home Work

Can you imagine anything so fascinating as decorating Giftwares at home? Could any other kind of work be so pleasant as applying beautiful designs in colors to such artistic objects as candlesticks, wooden toys, parchment lamp shades, wall plaques, picture frames, sewing tables, gate-leg tables? Then there are greeting cards to be colored, and cushion tops and other textile articles to be decorated in Batik, and fascinating objects of copper and brass to be etched in beautiful designs.

Many women do this work solely for pleasure, but it also is a splendid way to make money at home for there is a tremendous demand for these giftwares.

M. Gabriel Andre Petit
Art Director

Satisfaction Assured

Fireside Industries assures entire satisfaction to each of its members. If, after completing your instruction, you are not entirely pleased and satisfied, your money will be refunded in full. You have only to follow the directions and it is amazing to see what beautiful things one can make. Think of earning $2.00 in just one hour, for example, by decorating a magazine rack! Do you wonder that members of Fireside Industries are so enthusiastic about the work?

BEAUTIFUL BOOK SENT FREE

The beautiful Book of Fireside Industries, illustrated in color, which explains all about this new way to earn money at home, will be sent to you on request. Read how women earn money and beautify their homes and their lives. Just like a beautiful dream come true. Wonderful outfit furnished without extra charge. Simply mail coupon, or write, enclosing 2c stamp to help pay postage.

FIRESIDE INDUSTRIES
Dept. 60-W, Adrian, Mich.

decidedly narrow, and also decidedly exacting. Plenty of these men, if not at once, then later, *do* buckle down to learn the lessons of business's primary grade. They do enter humbly as students, and are content to tread the road of experience on foot. And when they do this, adding business education to college education, they invariably discover that business, like life too, has its mountain tops and its broad plains, where the bigness of a man is limited only by the bigness of his deeds. They discover that profit has its place in making the world move onward, and that accomplishment often may be bigger than its material inspiration.

A second type which college-training develops, possibly even with more earnestness than it does the first, is the chemist I have mentioned, the scientist, the teacher, the economist, the searcher after facts, and the creator of ideas that lead to things. Again, business is wide open to these men, is even dependent upon them for its progress, and, in a broad sense, is founded and conducted on the fruits of their brains. In their ranks we find the inventor, the clarifier of obscure facts, the builder of theories from which grow practices. These are the scouts outflung before business, pointing the way to its advance.

THEN why, since these men are indispensable, since business owes them so much, does it not nominate them to leadership? They *do* become leaders, but leaders in specialized fields! They rise often to greatness, but not to business greatness, and this purposefully. The scientist is happy only with his science; the chemist clings jealously to his laboratory; the economist cannot be blasted from his beloved charts any more than the teacher can be torn from his textbooks.

It is often regretted, in business and out, that greater material rewards do not go to these men, and that it *is* the factory man and the salesman who are lifted to leadership. We forget that business is only one field, whereas these products of the college belong to many. The profit maker is peculiar to business, as much a child of it as the chemist is a child of science.

But, while the two fields may overlap at spots, they do not join. Each has its rewards, and each has its leaders. The profit maker can no more hope to win scientific leadership on the score of his business education than the scientist can hope to become a profit maker purely by reason of scientific training.

Therefore, in this discussion, we must stay within our one field—business. We are dealing with the college man—or, more broadly, with the so-called educated man—who does enter business as a contender for laurels in that field, not for scholarly laurels, mind you, but for business laurels. He wants to become a business man. We are trying to ascertain what *he* must do to win in the field he has chosen, and so we must get back to our first contention; namely, that he must be considered uneducated until he gets education in business itself.

A large New Jersey corporation has an executive staff made up entirely of former office boys. It will not hire a man in its administrative or sales departments except through the office-boy door. If a college man wishes to be employed by this company, even as a novice salesman, he must be willing to begin on the office-boy bench and make his application there.

"Willingness to begin at the lowest place signifies a willingness to learn," says this company's president. "It is an admission that the newcomer knows nothing of our business; and that is what he has got to learn if he is going to stay here, regardless of what he knows of other things."

THE whole subject resolves into this, a time-worn illustration: Two men begin a journey. The one prefers to start at once, his one thought on his destination. The second chooses to tarry and make various preparations not directly concerned with the goal at hand, but which will add greatly to his joy and comfort. In the second man's case, the outcome alone can determine whether the preparations made have justified the handicap accepted, for each man must travel the same road and distance. After all, it is a race between men and not methods.

But suppose that these two men do reach the same goal at the same time. Is not the college-trained man then the richer, for *two* universities have graduated him?

A strange thing happens during that race, often as not. The man who has chosen experience as his teacher has not gone far before *he* makes a discovery. He finds that he won't be able to continue until he masters a certain book. That book shows him that a second book is a necessity; then a third, a fourth, and still more. The further he goes toward his goal the clearer to him becomes his need. Necessity, or perhaps choice, has dictated that he get along without college preparation; but now experience dictates that he cannot get along wholly without some of the things that the college teaches. He must know some books.

Andrew Carnegie retained a tutor even after he had become one of the world's richest men, and all of his life he was a student of men. Daniel Guggenheim and Otto H. Kahn are two among scores who for years bound themselves religiously to reading one hour nightly before retiring, regardless of the lateness of the hour.

Meet these ex-clerks and ex-mechanics who are at the head of our big businesses. More than a few of them will surprise you with the breadth and depth of their thinking, their familiarity with history, biography, literature, philosophy, and music. They, too, through the medium of books, have roved far beyond office and shop. Scores of these leaders are educated men by whatever standard you judge.

The college man begins with a knowledge derived from books and, if he is successful, uses this to help him gain a knowledge of business. The worker from boyhood, when he is successful, simply reverses the order: he begins with business knowledge and lets it be his guide to book knowledge. He gains *his* book education as he runs.

As to the question, "Should I go to college before entering business?" The business road is open either way. The individual must make his own choice. Many of our future leaders to-day are in colleges; more of them are in shops; but business, when they come up, won't be concerned over where you got your training; it will be concerned only with how well you got it and the results produced.

Debt is the Only Adventure a Poor Man Can Count On

(*Continued from page 45*)

married me she could not sew a stitch. I guess her folks had not counted on her marrying a poor man. In fact, I know they hadn't. But she has learned. She can pass a store window, and come home and plan and make a dress just like the one she saw.

And when one of the numerous boxes of clothing her family sends her comes along, Ione and the girls look like a million dollars. And I know she'd be happy to send the name of the flour sack which can be made up into the best undergarments and other useful pieces to any lady who'll send her a stamped addressed envelope.

Ione never complains. Oh, I'll not say, never. She's human. But she doesn't complain so much as I do by a long shot. And if anyone snubs or slights her—well, she's sorry for them, that's all.

As a matter of fact, the majority of the snubs and slights we have received have been due largely to ignorance and ill-breeding. Rudeness is not confined to any one class of people, though a rude rich person can no doubt get by much easier than a rude poor person.

"Your husband looks intelligent," said a woman to Ione. "Why is he driving a truck?" Now, I submit that there are many truck drivers besides myself who look intelligent. If Ione were the nosey, impertinent kind, I could understand people wanting to say things to hurt her; but Ione is gentle. I've never heard her say a mean thing to anyone. She is too forbearing.

THERE are too many nice people in the world to bother with the others. There are the Westons. They have a big car, and entertain quite a lot. But we have never gone into their home and been made to feel that we were out of place. They are real people.

But perhaps certain people feel toward us as we do when we see a certain couple coming up the walk. They are ignorant, their viewpoint is warped, we have little in common. Yet they seem to enjoy calling upon us, and we do try to make them feel as though we really wanted them. There is nothing the matter with them. They simply do not appeal to us. Would it be worth our while to snub them, make them feel uncomfortable, unwanted?

However, we had no qualms about making it uncomfortable for a certain family. These people got rich in oil and moved on the hill. They used to bring their children down and park them with us while they attended the little church close by. Then the woman failed to recognize Ione on the street or at the one club to which Ione belongs, so we ceased to be a parking space for her children during church hours. The idea that their money had placed them on a scale above us was galling. Money does not bring with it breeding or gentleness.

One day Ione came into the store where I work, to match some trimming. The saleslady showed her all the more expensive kinds. A floor manager came by and stopped to chat a minute with Ione, and this saleslady learned that Ione was the wife of the truck driver. "Oh," she said when the floor man had gone, "are you the driver's wife. Well, here's something cheap. Just the thing you want."

Now, those things hurt us. We are not cheap because we have to buy cheap articles. We take things to heart. We think people intend to slight us because we are poor or in a minor position.

I presume that because of this very sensitiveness and pride we sometimes hurt others as we are hurt. I know that our family have felt hurt at times. The woman of the house has wanted Ione to join many of her clubs; they have asked us to go with them to shows, to dinners up-town, and we have had to refuse. We could not tell them the reason is that we cannot hold up our end of the entertainment, which is bound to come with friends.

NEXT year when Edyrl attends Main High School she'll be snubbed because her father is only a truck driver. She's already had a taste of that stuff in Junior High. And it's going to be hard on her, because she won't have the clothes and the spending money that lots of the other girls will have. But she's going to have an *education*.

I've told her she will always have to contend with snobs; that she must remember her ancestors ran back to Adam, just as theirs did. A poor man has little time to acquaint himself with his personal ancestry back to the Garden of Eden. Let others play with that stuff. I went so far as to trace my ancestry to the old Romans who conquered England, and showed my Roman nose to prove it.

I told her about the three brothers who came over to America and planted our family tree here, and finally convinced her that she is a direct descendant of Governor Bradford of the old Plymouth Colony. I was sorry I had never bought the book which showed my family tree a-bloom—with my own picture in it, for five dollars extra. When I finished talking, Edyrl said: "But we haven't any money," which brought us back to the beginning. Edyrl is no dumb Dora.

I had occasion to go over to Main High School and have a chat with one of the professors there. I wanted to know what Edyrl should take for college credits. Sometimes pupils go through high and find they have not enough credits for college entrance. I'm not going to let my girls go through school on the hit-and-miss system. No, sir! This professor had an M. A. and Ph. D. and a few other letters tacked on the end of his name. But he didn't appear any different or act any different after he learned that I was a truck driver. I believe if we poor people quit approaching in an inferior spirit those who are more fortunate than we are—quit approaching them expecting to

CANDY

for Christmas

Christmas Time is Candy Time

WHAT is more thrilling than Christmas morning and a stocking filled with candy—childhood scenes—wonderful surprises—cherished family ties?

Candy lends itself so splendidly to the spirit of Christmas. There is happiness and good cheer in its very appearance. Truly, Christmas would not be Christmas without candy!

Santa Claus for this one day reigns an undisputed king. His gifts bring joy and gladness to every one and his favorite gift is candy. In no other form can you buy so much pure Christmas joy and make so many people happy. And you know how good it tastes.

The Quality goes IN *before the Name goes* ON

WHY does not Zenith build a radio receiver to sell for less than $100.00?

THE answer is that the Zenith standard of quality *cannot be built into a receiver of lower price.* Zenith will not put its name to a receiver that is not highly selective, powerful, faithful to the entire tone scale and wrought with surpassing skill and durability.

PERFORMANCE comes first in Zenith—there is no compromise. The 6-tube set has six *working* tubes instead of five working tubes and one balancing tube. Instead of three condensers the 6-tube set has four—the 8 and 10-tube sets have five and six condensers respectively.

IN every detail the same exacting standards are carried out. Zenith costs more but it *does* more. Hear Zenith and you will agree that Zenith is unsurpassed.

Zenith Model 14

A sensitive, highly selective 6-tube receiver of remarkable tone quality and range. The cabinet is of walnut veneers with ornamental overlays and panels of beautifully figured maple. The doors do not stand open like wings, but fold back against the sides of the cabinet, out of view. Model 14 will bring you all that is fine in radio.

For Battery Operation—$180
Completely Electrical—$255
Western United States prices slightly higher
Send for illustrated folder

ZENITH RADIO CORPORATION
3608 Iron Street • *Chicago*

ZENITH LONG DISTANCE RADIO

World's Largest Manufacturers of High Grade Radio—16 models—3 different circuits—6, 8, and 10 tubes—battery or electric—antenna or loop—$100 to $2500

Licensed only for Radio amateur, experimental and broadcast reception.

be kicked, as it were—things would be much better all 'round.

This same prickly sensitiveness also invades our religion; at least, it invades our social religious activities. Ione and I joined the First Presbyterian Church; but I have never felt at home there. You see, I was raised right over hell in a Methodist church. I can still smell the brimstone our old preachers used to stir up every winter. The Presbyterian hell is the same hell, I guess, only it has always seemed to me like the people—kind of formal; while the Methodist hell is burning hot, and flaming, and something doing every minute. When I was a boy we used to consider the Presbyterians a class apart, and I remember their children used to come over to our church during protracted meetings to smell our hell, and Christmas Eve they used to sneak in to see our fun.

And yet—somehow there is that feeling of sacredness pervading their service which sets you and God apart. You don't feel like getting too familiar with the Deity. God is a God to be worshiped and reverenced. Too often we Methodists feel we have the right to slip up and slap God good-naturedly on the back, just as if he were a sort of pal of ours. Not so this God of the Presbyterians. So, I rather like it, even if the sermons are too polished for my poor truck driver's understanding. I can rest there on the cushions and think up a little sermon all my own.

Once we all went to a social affair at a church celebrating a quarter of a century anniversary or something. Well, that experience would have been good for anybody who expected to hunt for the North Pole. Not a soul spoke to us, not even the preacher. We sneaked over and sat on the balcony stairs until the children finished their ice cream. Then we slipped away.

OF COURSE we should have joined a small church somewhere; but we lived close to this one, and after we joined we just stayed. It's probably our fault. We are very sensitive about our poorness. Moreover, we are not mixers, and all advances have to be made *to* us. Usually, none are.

For years even the pastor did not call on us. We felt that keenly. And none of the members called, unless they were taking up a special subscription or their husbands were running for office. But I think a preacher who pastors a congregation, and does not find time to call upon his flock individually is missing out on something most important. He should keep a card index of his visits, and should call religiously. They say that our pastor calls upon the sick. Well, if there's anyone sicker than the fellow who does not attend church regularly, who does not keep up his tenth, who is not giving any service to his church, who is it?

I've discovered that church membership is one thing and religious faith another. Religion is free, thank God. Anyone can get it without paying a single cent. But I imagine the very minute the old tent maker got away from the river and had to pipe water for baptismal purposes, the very instant he took up a collection for the support of the church, some other quality entered in.

I wouldn't trade my personal God, that God who has been with me in poverty and sickness, even that God who has given me this road to travel, I wouldn't trade Him for all the wealth and power in the universe. I've wandered from Him sometimes, but I've come back at dark and felt the gentle touch of a guiding hand.

My little girl, Lyril, used to awaken in the night and cry out from fright at some horrible nightmare she had. Her bed was right alongside my own, and I would reach out in the darkness and hold her hand until she went to sleep again.

My trip through this world has been like Lyril's dream, something of a nightmare. It would be indeed a Sahara without an oasis if it were not for God and the hope of a heaven beyond. What though the oasis is merely a mirage, as some say Heaven is? What if there is no oasis? I'll never know it until I arrive at the edge of the desert where I'm expecting to find it. If it has helped me thus far, if it has kept me from breaking, has picked me up when I stumbled, has added joy and cheer to my life, then it has fulfilled its earthly purpose.

JUST think what it means to us poor to think there's a mansion being prepared for us. All ready to move into. We don't have to move the old sofa with the stuffing coming out at the foot; we don't have to revarnish the scratches the children have made on the dining-room table; we don't have to take up the old carpet carefully lest we tear another hole in that worn place we had to cover with a small rug. We don't have to do a blessed thing. Just move into our mansion, and no questions asked. The landlord isn't going to inquire how many children we have, nor why we came up in the nighttime if we had paid our last landlord. We'll not have to scrub up the mess left by the last tenants, nor clean the wall paper with corn meal, nor cover that ugly break in the plastering with that old-fashioned gold-framed bewhiskered picture of an ancestor we hope was respectable, although we never knew him. No; we move right in and begin anew the great adventure.

I don't think many of us care about the wings and the gold-paved streets and the crowns. Crowns, anyway, have gotten into disrepute lately. Instead, we'd rather like to have our thorns and brambles turned to beautiful gardens and our tears to roses.

Ione is far more sure of God than I am. She has seen Him. She went down to the very edge of that dark stream which bounds the unseen world, and, peering across for the ferryman, she saw Him distinctly. He motioned her back away from the bank, and came swiftly across and took her by the hand and said, "Not yet, Ione, not yet." Then he led her back home to me and Edyrl and Lyril. Oh, I know folks will say that because Ione was sick with the fever she just imagined she saw God, that it was an hallucination. Ione never told anybody about it except me. We know folks are skeptical. But I believe Ione saw God just as surely as did John or any of those old saints back there in Bible days.

Although I'm poor, I have had cravings after beauty, and art and travel. I have had my visions. They've kept me going;

Silent Magic

Here is the Eveready Layerbilt "B" Battery No. 486, Eveready's longest-lasting provider of Battery Power.

Radio is better with *Battery* Power

TURN your radio dial, and presto! you turn your home into a theater, a concert hall, a lecture room, a cabaret, a church, or whatever you will. Turn the dial and your attentive ear does the rest. That is all there is to this magic of radio.

Or almost all. If a radio set is to work at its very best, attracting no attention to itself, creating for you the illusion that can be so convincing, you must pay a little attention to the kind of power you give it. There is but one direction, a simple one—use Battery Power. Only such power is steady, uniform, silent. It is called by scientists pure Direct Current. Any other kind of current in your radio set may put a hum into the purest note of a flute, a scratch into the song of the greatest singer, a rattle into the voice of any orator.

Don't tamper with tone. Beware of interfering with illusion. Power that reveals its presence by its noise is like a magician's assistant who gives the trick away. Use batteries—use the Eveready Layerbilt "B" Battery No. 486, the remarkable battery whose exclusive, patented construction makes it last longest. It offers you the gift of convenience, a gift that you will appreciate almost as much as you will cherish the perfection of reception that only Battery Power makes possible.

VACUUM BOTTLE

they have kept the spark of ambition alive. They've kept Ione by my side. And now that our visions have become a little blurred and farther away, we have Edyrl and Lyril. God made children to take the place of fading visions. We live again in them. We see their vision, catch a glimpse of their future, rejoice in their careers.

RIGHT now, Ione and I are planning for our girls. They're going to be journalists. They're going to write big things, colorful stories, cover big assignments. We've all talked the matter over together. They're to have their chance even on my twenty-five a week. They'll do wonderful things. Why, last year Edyrl was editor-in-chief of the paper in the Junior High!

Oh, I pity folks who have no children. They'll miss something in their old age. If they can't blow about their own achievements nor the achievements of their children, what is there left? Not much. Even in the poorhouse, where economists tell us we're headed if we don't budget, even there we'll be able to see our children's careers and keep the vision before us till the end.

And then, after we've slaved to the finger tips to give them a fine education, if they go and get married, why, it's going to be all right. Ione and I have thought of that too. Some folks we know spent every cent on a girl. Sent her away to learn to be a nurse. They even mortgaged their property, though they didn't lose it, as they do in fiction. And the year she became a graduate nurse she married a mechanic.

Her parents disowned her. The ungrateful thing to get married after all they had done for her! Well, that is but normal. We want our girls to marry; but we don't want them to marry just for a meal ticket. And we want to be sure they can earn their own way if the matrimonial boat upsets, as so many seem to be doing in this age.

But then, a husband isn't so great a handicap as he used to be. He isn't taken so seriously as he used to take himself when I took my vow. Suppose, however, our girls lose their careers in their home life—we're going to center our vision on their husbands' careers. No mere man is going to be good enough for our girls. We know that. But we'll put on our colored spectacles and do the best we can to think he is the ideal husband. And then, if they choose husbands who are just common, ordinary men, such as their father is, we've thought it all out, and we, Ione and I, will center our vision on our grandchildren—provided babies come back in style by that time.

"PITY THE POOR ORPHAN?" asks William S. Dutton next month. "No, envy him!" An unusual and decidedly provocative statement, but one that is richly backed up by facts out of the author's own life. Parentless before he was eight years old, and brought up in an orphanage, Dutton came to regard his orphanhood as a superior condition which gave him many advantages over other boys. And after you read this article you will understand the reason why.

The Young Magi

(*Continued from page 33*)

certain gentlemen in blue whose business it is to look after lost children and lost grown-ups, were to know that he was in town. Like most people in the world, Kid was more anxious about himself than he was about anyone else, however, and after a little thought he decided to let well enough alone.

But it may be recorded that he did not return that night to the companionship of his friend Red in the dark doorway. Instead, he went off up a side street, home; and there an old mother who had not seen him for many months made a tremendous fuss over him. And before he went to bed his hand fumblingly made a certain sign across his breast. Then Kid laughed at himself, for he knew that by morning his mood of to-night would be gone.

But until he slept he thought of the children—and of the days when he, too, had been a child, and knelt beside his mother in front of a straw-carpeted representation of a manger, wherein lay a little wax likeness of the Baby the children were seeking, and of Budge's hand, lying so warm and confiding in his. And while he was thinking these things, the children—

But where *were* the children?

Twelfth Avenue was growing dark. The fat Swedish woman who kept the candy and tobacco store on the corner turned out the lights in her little shop and retired to the two cluttered rooms behind it. The Italian gentleman who sold dry goods across his counter—and very wet ones behind a partition of wooden boxes across the end of his shop—turned out his lights and went home to his flat up-stairs.

The very old blacksmith across the street came back to his dim shop with a little package of meat that he had stepped out to buy for his Christmas dinner, blew out the flame in his smoky kerosene lamp, locked his door and limped off to his small cold room in the block next the river.

And on that street, growing darker and silenter and more sinister as the clock's hands crept toward the hour of midnight furtive shadows came and went. But the children were not to be seen among them. They had disappeared.

WHERE were the children?

Nora ran, frightened for them and for herself, through the great old house.

Kathleen ran too, and the butler hunted through the basement and the attic, hopelessly, but with the idea that no place should be left unsearched before the desperate expedient of calling the children's mother was resorted to.

"They were asleep in bed when I went down to supper," Nora wept over and

ver, and so at last, weeping, she told Mother over the telephone.

Mother was in the gilded telephone booth of a certain big hotel, where she had been eating dinner with a group of friends. At first, when she managed to understand what Nora was saying, she grew very faint; then she became calm and businesslike.

"Did you look for their clothes?" she asked. And when Nora said that the children had apparently gone away fully dressed for the street, Mother's lips set in a firm, angry line.

"Stop sniffling and stay in the house until I get there," she commanded briefly. Then she called a number which she knew by memory, although it was fully two years since she had spoken it. Finally, a familiar voice answered.

"Irving," said Mother, coolly sarcastic, "I called you to thank you for your Christmas surprise. I trust you will take good care of the children until I send the police for them—as I certainly shall do unless you give me your word to return them at once."

"Children?" said the voice, which was Father's. "Good lord, Blanche! I haven't seen them. I swear I haven't. You don't mean they're lost?"

Mother leaned against the wall of the gilded booth, suddenly feeling very ill. She knew that, although Father might have stolen the children, he would never lie to her about doing so. She ceased to be sarcastic and businesslike, and became only a terrified woman, crying out for help to the man upon whose strength she had for many years depended.

"Oh, Irving!" she wailed. "They've gone! I left them at home in bed and—they've gone! Whatever shall I do?"

And at that cry, Father, who had been sitting alone at his club, wishing that Christmas, with all its memories, was over, forgot that he had sworn never to speak to this woman again, and answered, "Keep up your courage, dear. I'll be home as soon as I can get there!"

And he did not know that he had said, "home" and "dear." For although his words were brave, he was shaking so that he could hardly replace the receiver on its hook, and a terrible fear gripped his heart.

Father's car and Mother's taxi arrived before the house with the stone lions almost at the same moment, and Mother and Father met in the front hall. They had parted with bitter words; but neither had time for bitter words to-night, for one look at the servants' faces told them no trace of the children had been found.

"Oh, Irving!" said Mother, her face breaking into strange lines of terrible sorrow. And Father, quite naturally, put his arms around her. "Be brave, dear," he said. "We'll find them—we must find them!"

Within an hour of the time that the children had crossed the Avenue behind the actory-looking person in spats and the old woman with the cane, the fine old house was full of strange men in blue uniforms and other strange men who did not wear uniforms but who had the keen eyes of those trained to track down criminals.

Some of these men questioned the servants until the women wept and the men became white and sullen. Some of them even questioned Father and Mother, until Father grew furiously angry and Mother's pale face became very red, and she stamped her foot in its small silver slipper and cried, "Oh, *stop* it! Stop wasting time, and find my children!"

One of the strange men sat at the telephone, and soon, in all parts of the great city, telephones and radios were telling the news of two lost children.

And then—maddeningly bringing disappointment on the heels of hope—reports of children who had been found, or children who had been seen in the company of queer-looking persons, began to trickle back over the telephone wire.

There were two lost children temporarily lodged in a police station in Brooklyn; but it developed that they were both boys and, an instant later, that they spoke only Italian. There was a child found crying in a doorway in Harlem, but this was a little girl about ten years old and she was a negress. A policeman reported having seen a woman in a tattered, bright-colored shawl, riding toward Bronx Park on the subway with a child asleep in her arms. . . .

"I can't bear it!" said Mother. "Just sitting here, doing nothing."

Father, too, could not bear sitting there inactive. "You stay, Blanche, and lie down. I'll go out," he said.

But Mother clung to him. "I—I can't face it alone," she whispered. "Let me come with you!"

So Father brought Mother's heaviest fur coat—left to herself, she would probably have gone with no coat at all—and Mother reminded Father that he needed to take his hat, and they started out.

They drove in Father's car, one of them staring out of the window to the right and one out of the window to the left. And now and then, the car stopped, and Father went in somewhere to telephone back to the house with the stone lions, or he stopped the car and got out, peered hopefully into the face of some child, late abroad with an older person, or poked, with no one knows what horrible fear, at a bundle of rags or old papers abandoned in some dark doorway.

They did not say much, but once, after they had ridden for what seemed to them years, Father demanded, "Where was Nannie that she wasn't looking after them?"

And Mother said in a queer, flat voice that was not at all like her own:

"I sent her away. She—she was telling them the story of Jesus and the first Christmas. You know, we agreed they were to be left to judge for themselves about such things."

Then she began to cry so hard that her sobs shook the seat of the car. And somehow Father's hand found Mother's, and the two hands clung together.

And while all these things were happening, the telephone wires had carried to the fine old house behind the lions the first really helpful clue. This came from a traffic policeman stationed at Fifty-ninth Street and Fifth Avenue, who remembered seeing a little girl in a blue coat and a little boy in a brown coat cross his street behind an old woman who walked with a cane.

When Father heard this, he ordered his chauffeur to turn the big car to the west.

2 Unusual Christmas Gifts—

The first is a gift that smooths the trouble from his one never-ending source of irritation—the daily shave!

How he and all men hate it! And what wouldn't they give for something to make it easier, quicker and smoother!

Give him a Twinplex Stropper. It will improve the edge even of a new blade so much he wouldn't recognize it. Just a few quick turns and he has a blade that will shave in a jiffy and as smooth as silk. He will use his Twinplex morning after morning for years—and bless you forever-more. Ready packed in neat Christmassy little red and green boxes, $2.50 to $5.00.

The second gift is a shaving brush that is decidedly different—Soap and brush in one beautiful shaving help. A turn of the plunger and just the right quantity of soap is forced into the brush. It is handy to use, quick and clean. The bristles are of fine quality, vulcanized into hard rubber so they won't come out. The brush is made of beautifully nickel plated non-rusting, non-corroding metal. You will be proud to present such a gift—and he will certainly be delighted to get it. Regular price $5.00—Special Christmas Price $3.49.

Special Christmas Offer—

Until Christmas these two fine gifts are being offered in combination. Here's your chance to get him both a Twinplex Red Flash Stropper and a Twinplex Fountain Shaving Brush at a real bargain price — $4.98. The regular price for the two is $7.50.

To be had at almost any drug, department, cutlery, hardware, sporting goods, or jewelry store. If your dealer can't supply you, write direct to us.

It is something a man would appreciate

THE gift of a Krementz Dress Set invariably wins his deepest appreciation. Perhaps this is so because his evening jewelry serves him when he is at his best—in formal attire. Or, it may be because Krementz Jewelry itself is so distinguished, and conventionally *correct!*

Whatever the reason is, you may be sure that here is a gift worth giving. And at the better shops you will find Krementz Jewelry for Men in a wide selection of gratifying designs and shapes, each set contained in its rich case—the perfect gift background.

Write us for booklet illustrating full dress and tuxedo sets, cuff links, chains, knives and a host of other gift suggestions.

KREMENTZ & CO., NEWARK, N. J.

Set No. 2433—3 studs with bodkin-clutch backs; pair links; 4 waistcoat buttons with bodkin-clutch backs, $17.50. Others, $8.50 to $50.

Krementz
Gift Jewelry for Men

And while the stars hid their faces behind a veil of clouds, and the city grew silenter and darker, and church bells began to peal forth their midnight message of the Baby of Bethlehem, and shadows went and came along streets that were now beginning to be powdered over with a fine, sugary snow, and, at last, the sky grew faintly gray with dawn, and more early church bells shouted with all the power of their iron tongues that the Hope of the World was born—Mother and Father drove up one street and down another.

Now and then they stopped to telephone, or to talk to one of the men in blue who were either on duty all night in those strangely quiet streets or had been sent out, in their little cars, to look for what Mother and Father were looking for.

"You might as well go home," said the men in blue, looking with pitying eyes upon Mother's and Father's pale, haggard faces. "We're doing all that can be done."

But Mother cried, "Oh, no, Officer! I can't bear to go home!"

And Father said, "Of course, you can do much more than we can, and we know you're doing all you can. But my wife and I can't rest, and we're keeping in touch with our home, so if we're needed there we can get back on a minute's notice. . . . We've got to be doing something."

He did not know that he had said, "my wife"—who for two years had never spoken those words. And when, after every fresh disappointment, he returned to the car and saw Mother's tortured eyes turn to him in eager questioning, he did not know that his voice grew tender and that old familiar phrases of endearment crept into the answers he made to her silent prayers for news.

AT LAST, when it was quite day, they gave up.

They were on Twelfth Avenue then, and on one side of them was the river, dark and ugly under a sharp westerly wind, and on the other the city, of which, as it seemed to them, they had traversed every inch. The city, so vast that two little children could be swallowed up in its dark, rapid stream of existence, as the whirling snowflakes were swallowed by the slate-gray waters of the river, and never heard of again!

Mother sat humped over in her corner, staring out of her window with hopeless, tragic eyes; and Father sat in his, staring out of his window with eyes that saw, in imagination, a long line of lost children . . . poor Charlie Ross, who was never found. Other children, who, even more tragically, had been found only as poor, mutilated little bodies buried in shallow graves. . . .

The chauffeur halted the car and looked back. "Where to now, sir?" he asked pityingly.

Father looked over at Mother. "Home," he said firmly. "No, Blanche, you must—at least for a cup of coffee and a few minutes' rest." So the chauffeur drove slowly up the street toward the next corner.

There at the corner, under an old weatherworn wooden horseshoe, a little group of people, who were probably on their way home from church—for there are many church-going people in those dingy old buildings along the water front—stood, staring, and pointing through the dirty window of an old smithy. The chauffeur drew the car to a stop. It would do no harm to ask—

Before he could speak, a woman said, "Poor little mites! Sound asleep they are—an' how they got there, the good Lord only knows!"

The chauffeur got out and peered through the window. Then he came back to Father's side of the car, and his face was shining. "Come," he said to Father in a shrill whisper. "Come and look! I never seen only their picksures an' I may be mistaken, so you'd better come yourself before you let on to the Missis. . . ."

Father got out and crossed the sidewalk. Then he came back, and *his* face was radiant. "Blanche," he said, taking Mother's arm and rousing her from the sad half-stupor into which she had fallen, "come here!" And quite naturally, he put his arm around her and led her across the walk to the window.

In the shop everything was as the near-sighted old blacksmith had left it when he went home with the little package of meat for his Christmas dinner. The rusty old anvil stood in its place before the forge, in which the small fire he had kept burning, rather as a protection against cold than as a requisite of business, had burned itself to ashes. Bits of old harness hung on the walls.

And in a low manger, in which a horse might have eaten its dinner if anyone had a horse which wished to dine while it was waiting to be shod, on a few wisps of straw, lay the two children, fast asleep, with their arms around each other, and Buster's coat spread over them both and the woolly bear and the toy engine sharing their cramped quarters!

There they were, and there they had been all night, rather cold but quite secure and safe, while Father and Mother and the men in blue searched the city for them, and the shadows, good and evil, passed unheeding the dark window behind which they lay!

THEY didn't remember much of their adventures when finally the door was opened, and they were wakened and carried out to the car, and, I am sorry to say, they were both so tired that they were very cross. But they both, after considerable excited questioning, recalled why they had left the fine old house with the lions, and how they had happened to wander into the blacksmith's shop.

"To find the Baby in the manger," said Mother tearfully, above Buster's nodding head; "the Baby of Bethlehem;" and Father, above Budge's nodding head, said queerly: "To give Him the toy engine and the woolly bear and the ring-with-a-pearl-in-it!"

Mother and Father were silent for a time, holding the children very tightly, as if they were afraid lest they vanish into thin air.

Then Mother said brokenly, "And to ask Him—to send you—back to them, Irving."

Father said, "May I come, Blanche?"

And Mother raised toward the gray sky a face that looked twenty years older as the price of that terrible night.

"I think," she whispered, "the Baby of Bethlehem has sent you back, Irving. So what can you do but come?"

Dudley and the attycornered Dog

(*Continued from page 41*)

hers is not used to going without sleep. hum of machinery in a nearby shop me fainter, became the murmurous of bees in the orchard on the home n. He was back in happy boyhood and his mother was washing his face nly the cloth felt rough, like the tongue calf. The calf was climbing into his No, it was not a calf. It was Alexer!

efore Dud was sufficiently awake to ze that this enemy to his career must liscouraged, he had given the dog a ial hug and had spoken kindly words im. In the midst of this family ion, Dud became aware that part of rn human face was protruding around nearest corner. This fractional face me whole, became a complete man, ung man with a blue suit and cap and ittering star. So Dud looked for the time on that officer of the law and ld-be deteckative, Zack Folsom, ader of Tillie the Toiler, and victim of iness of the bean.

ack was the first to speak:

"HERE did you get that there dog?" Dud repeated the now familiar fora: "He's not my dog; he's just been wing me around."

"What's his name?"

"Alexander."

ack took out a notebook and registered ought, also a chuckle.

"Ketched you that time. I worked t purty slick."

"I don't know what his real name is. ll him Alexander because he looks like wing-machine agent."

he young sleuth looked with astonishnt at the dog, then at Dud. Clearly culprit had not bettered himself any this explanation.

"What are you doin' here on private pitty in your sock feet?" was the next stion.

"I was resting my feet on account of v shoes. I guess I must have dozed off ttle."

"Too much night work," said Zack, tting his lead pencil.

As this interview went on and on, it gan to dawn on Dud that his position s not a happy one. The name of mmerton seemed to have lost its gic power. He was innocent of all ong-doing and he answered every estion truthfully. Yet it became inasingly clear that he was not giving isfaction. He could not tell the officer here he had obtained work because his s were sealed. The fact that he did not e anywhere was held against him. His conventional exit from the Epicurean fé looked bad to the majesty of the law.

"Did you pay for what you et at Joe's ace?"

Dud was genuinely surprised.

"Well, sir; I bet I didn't!"

"Why not?"

"I plumb forgot it."

"A cheater of pore workin' girls" was w added to the growing list of indict-

YOUR GIFT TO THE MAN WHO ALREADY HAS A CHAIN

LET it be another chain. A different kind of chain. A Bondstreet! And your gift is sure to please every man who has a pocket-watch.

The Bondstreet is new. It has set an authentic style trend in masculine jewelry. Notice its heavy, *over*-sized links—twice as large as the usual ones. Notice its simplicity. Yet the Bondstreet, for all its restraint and dignity, is graceful — with no hint of unwieldiness. By all means, before you check off the men's names on your list, see the Bondstreet at your jeweler's!

Your jeweler carries other Waldemars in new and distinguished Simmons designs—as well as Dickens, Vest and Belt chains. Priced from $4 to $15. Our process of drawing natural, green or white gold over a stout base metal assures years of service. . . .

Simmons Watch and Flexible Bracelets for women have the same fine qualities. No woman ever has too many bracelets. And these, like Simmons Chains, are reasonably priced—from $5 to $15. The chain shown here is No. 28,836. Price, $9.50. Bracelet No. 28,287. Price, $6.75. R. F. Simmons Co., Attleboro, Mass.

AMITY wallet, Key Kaddy and cigarette case of imported steerhide. Tool embossed, hand-colored and laced. Gift box handsomely silk-lined, $12.50. Other sets of various designs and leathers from $2 to $50.

Choose AMITY *gifts —matched sets of durable, luxurious leather*

CHRISTMAS gifts are fun to give—but they're a problem. For women they should be smart. For men they should be sturdy. For both they should be friendly—and lasting as friendship itself.

That is why you should choose Amity Christmas gifts this year. Made of only the most perfect leathers obtainable, they come in matched sets. Some plain, some trimmed with gold, others richly tooled and hand-laced.

Amity gifts have a quality of richness that delights you from the very beginning. As time goes on the leather softens —mellows—and they become one of the most precious possessions of their owners.

For men you can buy wallets, billfolds, Key Kaddies and cigarette cases, while there are smart hand-bags for women. They come in silk-lined gift boxes, and make Christmas gifts you will be as proud to give as you would be happy to receive.

There is an Amity display at your dealer's. Write us for our booklet No. 12. Amity Leather Products Co., West Bend, Wisconsin.

if stamped **AMITY** *it's leather*

ments. "If it hadn't been for that pup you mighta made your get-away. He went back the alley huntin' you, and I up and follered. Do you work alone or have you got confederates?"

Dud knew what confederates were, but there had never been any in his family.

"Grandpa was in the Union Army," he said. "He died in Libby Prison."

"So you admit that?" Another debit item went into the record. "Well, put on your shoes and come along with me. You're under arrest."

"What for?" asked Dud.

"That'll be explained at the police station. Will you come peaceable or shall I stick on the bracelets?"

Dud resumed his shoes and hat, but declared himself willing to get along without handcuffs. Otherwise he was a perfect illustration of "What the young man will wear when going to jail." At the first sign of activity, Alexander wagged himself extensively and capered on ahead with his limpy leg and his famous oblique angle. Now that he had brought these two together his cup of happiness was full.

The queer parade moved up the alley which passed the Epicurean Café.

"Let's stop and pay the girl for my dinner," said Dud, "and get my valise. It's got a letter from my pastor saying I bear a good name."

"Forgery!" exclaimed Zack. He knew his under-world too well to be taken in by such shoddy tricks.

"It's got my nightshirt and things into it, too. If I've got to go to jail I ought to have my grip."

"Leave it be; I'll get it later." It was evidently the detective's purpose to examine the bag at his leisure with his shrewd, experienced eyes.

ON THE way to the police station, while men stared curiously and small boys showed undisguised pleasure, Dud permitted himself this unspoken question: Was Branford some kind of insane asylum, or did all city folks act in this crazy way? He was glad of one thing, however; the line of march did not pass Hammerton and Steckmeyer's Society Clothing Store.

An hour later, in the quiet of a cell in the county jail, and with his shoeless feet and faithful dog resting comfortably on the cot, Dud thought deeply about his strange situation: Upon their arrival at the police station, Zack Folsom had conversed privately with a man he had called "Captain," though the man had looked more like a major general. This official had seemed hard to convince, and Dud had begun to hope that he would be set free. At last, however, the higher officer had said, "All right, Zack," and the culprit had been taken over to the adjacent county jail charged with the grave crime of not having a license for somebody else's dog! Alexander had been locked in the same cell.

Though Dud's train of thought was slow, it usually arrived in time at the proper station.

"That dog business was just an excuse," he now concluded. "They put me in for something else."

But there his train of thought stopped. He had committed no offense against law and order, but had faithfully followed the precepts learned at his mother's knee. He had told the truth and kept his word.

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

despite sore temptations. He had been kind to dumb animals and courteous to ladies. And where was he as a result of these virtues? In the county jail!

Happily, his prison term would be limited to this one night. Morning would release him from that pledge of silence which had cost him so dear. Mr. Steckmeyer would then come, acknowledge him as a partner, and clear his good name of shame.

The prisoner had made only one request of his new hosts—for writing paper and a plain stamped envelope which did not contain any allusion to his place of residence.

"I promised to write to my mother my first day," he had told the jailer. This boon had been so promptly and graciously granted that Dud was surprised.

His letter home was a triumph in optimistic literature in that it remembered only the happy hours. Carter's Corners was two days distant by mail, so his promise to the senior partner was not involved. Before Mother could receive the letter, Mr. Steckmeyer would have openly acknowledged him before the world in letters a foot high. So he told her of his great good fortune, looking ahead to the happy day when he would begin to share in the profits of the business and he and his mother could set up housekeeping.

Minor matters were more briefly related. "I had a good dinner in Mr. Epicurean's restaurant," was one bright thought. "A funny little dog has been following me around all day"—another cheery note. Finally came this perfect example of the art of telling the truth without inflicting pain:

"I have not found a good boarding-house yet, but I am spending the night in a place near the Courthouse. It is clean and quiet and cheap."

THE whole truth was merely postponed. When brighter days were here and Mother had come to live with him in a little cottage with rambler roses climbing over the porch, he would tell her the entire story and they would have one of their old hearty laughs together. So with a cheerful good night and three loving "x's" Dudley closed, sealed his letter, and gave it to the kind turnkey.

He then gathered the pestiferous Alexander up into his arms, pressed the little dog against his thumping heart and bravely prepared to spend his first real night away from Mother in jail—a lad with a lump in his throat but a firm faith that right would prevail; a bewildered, homesick boy but a gentleman unafraid.

All he asked now was that this miserable day should hurry to its close. By and by there would be something in the way of supper—which he would share with his low companion. Then would come merciful sleep and the dawn of a brighter day—Mr. Steckmeyer, vindication, and liberty. But now the voice of the detective could be heard in the corridor, and Zack was at the cell door.

"I brung a man to see you," he said. On his face there was what Tillie had called, "A dirty look."

The jailer swung the door open, Officer Zack stepped aside, and—to Dud's utter amazement—in walked Mr. Steckmeyer!

YANKEE
The new improved model. More closely cased, antique bow and crown. Always dependable and sturdy $1.50
Yankee Radiolite $2.25.

WRIST RADIOLITE
Everybody needs a wrist watch. Night or day, the time's in sight—at a glance. Unusually dependable . . $4.00
Plain Dial Model $3.50.

For Christmas an Ingersoll

WHEN you give an Ingersoll Watch you make a gift that is appreciated out of all proportion to its cost.

For there's no gift like a watch, nothing used so much, consulted so often, carried so long. And Ingersoll Watches, made for over 35 years, have a reputation for dependability and enduring service that is world wide and thoroughly deserved.

There's an Ingersoll for every member of the family—at prices ranging from $1.50 to $17.50. If your dealer hasn't just the model you want, write us giving his name.

INGERSOLL WATCH CO., Inc.

"Well, how did you hear about this?" asked the astonished boy.

"This officer came and told me," said Mr. Steckmeyer coldly.

"But I never told him or anybody." Dud looked an inquiry at that minion of the law.

"It's my business to find out things," said Zack mysteriously.

"They made a wrong mistake," Dud pleaded. "They locked me up because I had no license for that dog. I never saw him before."

"You had him when you came to my store."

Dud explained that again. He protested that he had never done anything illegal in his life; he begged Mr. Steckmeyer to admit their partnership and make an honest man of him.

"I did say something about taking you in; but I guess I was the one taken in," replied Mr. Steckmeyer. "I thought you were an honest young farmer with a good name. The partnership's all off now. I don't want any jail-birds in my business."

"THAT hick makeup was pretty good," said the rising young detective; "but it wasn't slick enough to fool me. He never saw a farm in his life. He's the offscouring of our great cities."

This libel left Dud so dumb with resentment that his visitors escaped before he could find the right words for further protest.

"Now I *am* in a pickle!" Dud groaned, and sank into his chair and hid his face in his hands. His hope of vindication, his good name, his bright future, his very faith in humankind had all gone to smash in five horrible minutes. He was endless miles from home, in a strange city, without a friend. At this low level in his life he felt something warm and wet against the back of his hand. It was the sympathetic tongue of Alexander, his sole comforter in trouble, though the sole author of that trouble.

"I wish I had never laid eyes on you!" Dud said sharply.

Alexander sprang gayly into Dud's lap and kissed the end of his sunburnt nose.

A long time passed. The shadows had deepened in the little cell when the turnkey came again.

"The captain wants to see you over in the station," he said. "Come with me."

"Wait a minute till I put on my shoes."

"We'll leave the dog here," the jailer said as he opened the door. "Hey, stop him!"

But Alexander had practically no respect for the majesty of the law. He darted through the door into the corridor and trotted along with his master. Apparently, he had signed up for the duration of the war.

"We've got no time to ketch him now," said the jailer. "They's folks to see you."

"Who?"

"A girl and a man. It's not my place to mention names."

As Dud was ushered into the little enclosure behind the captain's desk he saw his visitors seated there. The man was a total stranger, a middle-aged, well-dressed gentleman of prosperous girth. The girl said, "Hello there," and thus revealed herself, despite a change in costume, as Tillie the Toiler. Dud now formed a hazy theory that she was here to charge

Original from STATE UNIVERSITY SYSTEM OF FLORIDA

him with cheating the restaurant. Probably this man was her boss, Mr. Joe Epicurean.

The major general allowed the jail-bird to sit down, and called out, "Hey, Zack!" Presently the party was complete, including the paper suit case. The "catty-cornered" dog investigated all these characters, then came back and scratched himself all over Dud's stylish shoes.

"Now, sir," the major general spoke respectfully to the solvent-looking man, "if you want to ask the prisoner any questions."

More questions! It seemed to the irritated Dud that all Branford was spending the day asking him questions.

"What is your name?"

"Dudley Hammerton." There was a note of stubborn defiance in his reply.

"Did you tell this young woman that you were my long-lost son?"

This was a brand-new crime, and before Dud could reply Tillie interposed:

"He never said he was. He said he was in the clothing line, and I thought maybe."

"Let's get this all straight," said the man. "What did they arrest him for?"

"That dumb-bell"—Tillie pointed out Zack—"pinched him for operating a dog without a license."

"Nonsense! They can't lock a man up for that."

"They can't, but they done so. Zack told me his own self when he come for the grip. That's how come I went to get you."

"It's like this, Mr. Hammerton"—Dud turned to hear what the captain had to say to him, but that official was talking in the general direction of the older man—"that charge was just a formality—we had to have something to hold him on until we could get the information we needed. A man is wanted by the police in Hainsworth for a series of robberies, and this person who calls himself Hammerton is under suspicion. We've wired for further particulars."

"Does this young man answer the description?"

"THE dog does, sir," said Zack. "The criminal was last saw with a little white dog just like him—one lame foot and a slanting way of running. I've investigated thorough, and that dog's been with this fella ever since he got off the ten-thirty-two this morning."

"Pretty slim evidence to hold a man on," said the capitalist. "A homeless dog will take up with anybody."

"Yes, but they's other things that look peculiar," Zack replied. "He slipped out of Joe's restaurant without payin' his bill for what he et. He hung around the back window of Strunk's Novelty Works in his socks. He was sleepy, like a party that works nights. What's more, he admits he comes from a criminal fambly."

"*I do not!*" cried Dud. Everybody has a boiling point and aspersions upon his family was Dud's. His face was flushed with anger. "My folks have always had a good reputation in Carter's Corners, and I wish I'd stayed there instead of coming to a city where everybody acts so looney!"

"You said your own self your grandfather died in prison. I got it here in my notebook."

"It's just what I needed"!

Smart ostrich hide inlaid upon sturdy calfskin —to combine beauty and wear. Six 14K gold-plated hooks. Full calf lined. A popular gift model for discriminating people. Price $5.00

WHAT a satisfaction to hear that said about *your* gift. Yet how hard to find a gift that really measures up to it.

Buxton Key-Tainers have proven immensely popular as gifts. In appearance they are all that a gift should be—handsomely designed in fine leathers—hand wrought throughout. And in use they serve a practical purpose—complete protection for keys.

Only in a Buxton Key-Tainer can you find these added refinements and conveniences. Each key is firmly held in place by tempered steel one-piece swivel hooks. A patented pocket flap keeps the Key-Tainer in shape after long, hard wear. And inside the flap the Buxton Key Return Card is always there to protect you—bringing back the keys if lost—quickly, safely.

Buxton Key-Tainers come in a wide range of fine leathers—including the new Ostrich-inlay — a particularly smart gift model. No matter what your gift requirements, somewhere among the Buxton models you will find just what you need. At a range of prices to suit any purse.

Leading jewelers, department stores, leather goods and stationery stores carry Buxton Key-Tainers. If you don't find exactly what you want write us and we will tell you where you can get it. Address BUXTON, Inc., 203, Main Street, Springfield, Mass. *In Canada, The Julian Sale Leather Goods Co., Ltd., Toronto.*

INDUSTRIAL AND COMMERCIAL CHAINS FOR EVERY PURPOSE

"I said Libby Prison. Are you so dumb you don't know what that was? You must be—dippy in the bean."

Zack's impending reply was cut off by a wave of the important citizen's hand.

"What," the gentleman asked, "was the name of the grandfather who died in the Civil War?"

"Augustus C. Hammerton!"

Three people simultaneously cried, "What?" and Dud jumped from the unexpected volley of sound. This was certainly the craziest flock of humans he had ever known.

"But why didn't you come right to me instead of sneaking around in alleys and acting suspicious?"

Dud had been so thoroughly shaken that he had lost all his accustomed deference toward older people. A red tint showed through the deep tan of his face and he answered:

"Because I don't know you from a calico cow."

The company gasped at this impious speech, but the effect upon the rotund gentleman was electric.

"THAT settles it!" he cried. "Nobody but a true Hammerton ever used that phrase. Other things could be faked up but not that." He now addressed Dud. "I am Augustus C. Hammerton. I was named after my uncle, that soldier grandfather of yours. Your father must have been my first cousin." Further questioning confirmed this theory. It seemed that the current Augustus C. had been out of touch with his relations for many years.

"I knew it was something like that," said the triumphant Tillie. "But in the movies it's generally always a long-lost son."

The police captain introduced a less romantic note:

"Mr. Hammerton is our most prominent merchant. He owns the largest clothing store in this part of the state."

"Clothing store!" Dud saw a great light. "So that's why—"

He then told the complete story of his dealings with Mr. Steckmeyer.

"He wanted your name on the sign," said the great merchant. "It is pretty well known, and it would catch lots of ignorant or careless people. He was buying your good name, but when he found you had lost it he dropped you like a hot potato."

"I'd have been a good, honest partner to him."

"An honest partner would have been an embarrassment to Steckmeyer. He probably figured on selling your contract to me—a kind of blackmail. I have plenty of honest competitors in Branford, but Steckmeyer is a bad egg."

"I don't know yet how they found out about him," said Dud. "I promised not to tell anybody, and I didn't."

Eyes of inquiry were focused upon Officer Folsom, who was visibly embarrassed.

"A deteckative sometimes has to do things that's not so nice. Well, 'smatter of fact I steamed open the letter he wrote to his mother."

A painful silence was broken by Tillie:

"It's a funny thing who they put in the cooler and who they leave loose!"

"I'm glad I pulled him in," said Zack,

Digitized by Google
Original from STATE UNIVERSITY SYSTEM OF FLORIDA

"and got him out of that fella's clutches. I worked it pretty slick."

"Huh!" scoffed Tillie.

But the next time Dud looked, Tillie had visibly softened toward Zack, and she presently allowed him to escort her out into the dangerous streets. With her went Dud's cordial thanks for her help and eighty cents for his lunch, the only money he had spent thus far in Branford.

At Mr. Hammerton's request, the police captain telephoned to Hainsworth and learned that the missing burglar was unlike Dud in about twenty important respects.

"He probably rode a freight down to Branford and chucked out his dog," said the major general.

"Now, that that's settled," said the merchant prince, "how would you like to work for me, Dudley?"

"I'd like it fine," said Dud. "Of course I don't know much about clothing."

"I wasn't thinking about clothing; but I've got a fine big farm just outside of town, and I need a man exactly like you. Everything modern, good wages, a chance to be manager some day. And a nice little house to live in."

"Could I—do you mean to say I could b-bring my mother?"

"Sure. It's just the place to keep a mother."

Dud swallowed three lumps in his throat the size of walnuts and tried to recover his voice. Then he felt a cold nose against his fingers.

"And," he gulped, "Alexander?"

Who is Your Hero?

(*Continued from page 34*)

Hero?" and as a result I am now a university graduate. I believe I am ranked as something of a writer and scholar, and I am pastor of one of the most influential churches in Chicago."

I could fill this entire article with instances just like that.

"It all depends," Fletcher said to me recently, "it all depends on having the right kind of heroes. They are the biggest power in any man's education. You can tell a man by the heroes that he keeps. They are his real inner spiritual companions. Somebody asked Theodore Roosevelt who was his hero. Instantly he replied, 'Timoleon.' I don't know much about Timoleon; but if he was the ideal hero of Theodore Roosevelt, I know he was *some* man, and so do you.

"It is personality," Fletcher went on, "that moves the world, and the reason some men have become great heroes is because they have more personality than common men. But you should always remember that you are yourself a hero to someone. You know, Thackeray said that there was never an Irishman in Ireland so poor but that there was some still poorer Irishman living off of him. And there is no one so obscure but that someone is modeling his life on his pattern. When that thought gets hold of you, it is the biggest power for right in a man's life I know of. And it's the biggest power for achievement.

"Of course a boy's father should be his great hero; but often, without your

THE OVERLAND ROUTE

knowing it, your boy's hero is the bootblack around the corner, the crack player down at the poolroom, the hired hand, the jockey at the county fair. They may be filling your boy's mind with hero pictures of the most lasting influence. These characters are all so human, and get close to boys' lives, while often the so-called leading citizens—the banker, lawyer, Sunday-school superintendent—never get into the confidence nor learn the secrets of Boyville.

"FOR instance, I never found out much about animals and flowers and birds and biology from my prim and learned teachers in school and college, but I did learn a lot about them from Skunk Uncapher. Skunk was a pelt collector and trapper who lived in a shack near us, and had a lot of hound-dogs and half-fed children. Because of the olfactory advertisement of his profession and the evidence that he was not addicted to excessive bathing, he obtained his descriptive nickname. Father held him up as a character I should *not* admire, but, to save my life, I could not see why. I was fascinated by a cap he made himself out of coon skin, with ear flaps that hung down like a hound's ears; and he knew more true stories—genuine natural history—of birds and animals than any other man I have ever known.

"While I think this dear old fellow's influence was mostly good, and it lasts to this day, yet it shows how children *are going to imitate the personalities in their environment.* For instance, right now, as I talk to you I still have some of the mannerisms that I cultivated earnestly as a boy in trying to imitate one of my heroes, a young neighbor farmer, and a fine athlete, named Tom Norwood.

"Tom was the best fighter, the best running broad-jumper, the best rifle shot in the neighborhood, and he walked the part, with his arms swinging vigorously, and his thumbs sticking out. This gave him a fighting, get-out-of-my-way air. How I did admire this and try to imitate him! He never knew the powerful influence he was exerting on me. He was famous for shooting hogs so they would never squeal—some feat, I can tell you! I traded around for two years to get a rifle to try it, and in time I became an expert hog shooter. Finally, when I was about twelve years old, Father gave me a nickel-plated rifle. No honor I may receive to-day can afford me half the thrill I had when people traveled ten and twelve miles before daylight to get me to come and shoot hogs and beeves.

"One Thanksgiving day, a few years ago, I was scheduled to address a big gathering of farmers in western Kansas. It happened that the crack shots of the plains were having a round-up and shooting for big prizes. In mere sport, I went into the contest, and by night, when I was forced to leave for the opera house to speak, only two of us were left to shoot off the finals. Two years afterward I was called to speak in that town again and, to my chagrin, they had forgotten all about my speech and remembered only the reputation I had gained as a marksman.

"We just have no idea whom the young people about us are going to imitate. I remember I picked sheep and hoed corn and did all sorts of disagreeable tasks, to earn money to buy a pair of celluloid cuffs and a pair of huge onyx buttons that would rattle like the ones Tom Norwood wore when he was dressed up. On every possible occasion, I would give them an impressive Tom-Norwood rattle, especially as he did when he helped a young lady magnificently out of a buggy.

"Outside of my admiration for Tom Norwood and my desire to be like him as an athlete, there was a young preacher in our neighborhood, when I was about twelve years old, who taught me boxing and wrestling. These two heroes, coupled with my reading about John L. Sullivan, who was then in his prime and who, I supposed, was a great and good man, gave me an ambition to take care of and develop my body. I ascribe much of the good health and working capacity I have to-day to these heroes. And this young preacher also inspired me, as scarcely any other man ever did, with the grandeur of courage.

"I can't remember a word he ever preached. But right to-day I feel a thrill, and I am a little braver, when I think of his fighting qualities. He went after the saloon and the tough gang up at Five Points. They threatened him and threw rocks through his buggy top, and tried to kill him—but he defied them and went straight ahead. No preacher I have ever known has influenced me as he did, because he made himself my hero.

"And you can depend on it, Wiggam, you can't do much, and you won't amount to much, unless you can make yourself, somehow, a boy's hero.

"I RELATE these apparently trivial incidents only in order to show you how every man, if he is honest with himself, can trace nearly everything he is back to the heroes of his childhood. For instance, why do I tingle to my finger tips, to-day, at the sight of a fine horse stepping along as if its nerves were electric wires? Why, that goes directly back to a horse-jockey hero of my boyhood, Lem Stockman.

"Most of the jockeys of that day were bums, but Lem was a fine, upstanding man, and fed his horses sugar instead of whipping them. And when Lem would come down the home stretch with a big number on his arm, and Father would hold me up to see him, it drove me into ecstasy.

"Of course I had to try to imitate my hero. I tried sugar on our old plow horses and Mother was a long time in solving the mystery of the frequent emptiness of the sugar bowl. Eventually, I got money enough to subscribe for the 'J. C. C.,' the racing magazine of that day, and it is a pleasure to-day, at a big convention of farmers or older business men, to be able to rattle off the names and records of all the great horses of that time.

"Well, I was determined to be a great horse jockey, and I got an old front buggy wheel from one neighbor and a hind wheel from another and from Clint Schooley, the blacksmith about half a mile from our house, I got an old axle; and thus, gradually, I assembled a sulky. We had a big old Percheron horse we called 'Old Perch,' and for him I devised a set of harness, mostly made of twine. I noted Lem Stockman's harness had no hold-back straps, so I thought these unnecessary—a fatal miscalculation.

"I had to conceal my plans, so it took months to carry out my great enterprise. But finally the great day came. Father went to town, and I led Old Perch out on top of the hill back of the orchard and got him hitched to my wonderful 'one-hoss shay.' Starting on top of a hill, instead of at the bottom, with no hold-back straps, was another topographical error of the first magnitude. But finally I climbed into the cracked iron mowing machine seat I had fastened onto the axle and got Old Perch's tail under me properly, in true Lem Stockman fashion.

"Old Perch went through it drowsily and seemed uninterested. But just as I sat down on his tail a huge horsefly lit on the small of his back, and he needed his tail badly for defense purposes. He started—with a small boy's legs and an iron seat and axle cracking against his hind legs, and with no hold-back straps. Well, that is the last I remember until I picked myself up from the hillside and saw Old Perch tearing madly down past Clint Schooley's shop and scattering my sulky all over that section of the state.

"But, notwithstanding this disaster, I still admired jockeys and fast driving.

"OF COURSE, Mother and Father held up the Bible heroes to me, but I seemed to admire the wrong ones or get the wrong angle. I tried to imitate David's little difference of opinion with Goliath. I made me a sling and waited for the hired hand, Jerome Ullman, to come out of the barn door. As he did, I blazed away and nearly broke one of his fingers. This was the only time Jerome ever spanked me, for he was a noble Christian character and a sort of foster-father to me, and he has been a great hero to me all my life.

"And speaking of Jerome Ullman's influence, certainly Jerome never thought of himself as a hero. But I tell you you are always a hero to someone, who is modeling his life after your pattern. For instance, I have offered prizes in many schools and colleges for the best essay by the student on 'Who is Your Hero?' And, it is inspiring to find that they pick out, not the richest or most famous or powerful person but the one they think is the most *useful* citizen.

"In one town they all wrote about an old sandwich man who had a hot-dog stand where he served passers-by. Yet this man had impressed himself on the youth as the biggest hero in the town, because he had taken a poor young woman, who had got into trouble, from the county jail and had given her and her unfortunate baby a good home and an education; and he was then raising money for a permanent home for girls who had no homes and had met with misfortune. And he had always been the moving spirit in establishing playgrounds and making the community a better place to live in.

"And so dear old Jerome Ullman has been a potent hero in my life. The notion that you must be big and great to become a wonderful hero in your community is all wrong. To become an inspiring hero to young and old is open to the humblest man.

"Shortly after my attempt to emulate David's skill with a sling, an incident happened which, I shall always believe profoundly, changed my whole career. I was up in the hay mow one day, when suddenly my father walked into the barn

CARIBBEAN CRUISES

GREAT WHITE FLEET ships are built especially for tropical cruising. Every room is an outside room; the food served is equal in variety and quality to that served in any first-class hotel.

—and there is a fine personal service making good the slogan of the Great White Fleet—"Every Passenger a Guest."

Sailings from New York and New Orleans twice every week in the year

Great White Fleet Cruises to the Caribbean carry only first-class passengers, and every detail for their comfort—hotel accommodations, motor trips ashore, railroad journeys, sight-seeing jaunts are all carefully planned in advance—**and everything is included in the price you pay for your ticket.**

Sister and Sonny have just learned they are going to California this winter

Golden California—stretching its pleasant playgrounds along the sea. Sunny land of fruit and flowers — where living is a joy the whole year 'round.

Five famous Santa Fe trains leave Chicago every day for California. "Santa Fe all the way." Besides *The Chief* there are The California Limited, The Navajo, The Scout and The Missionary — all offering famous Fred Harvey meal service.

On the way—Grand Canyon National Park and the Indian-detour

After California— Hawaii

with Hise Morton, the champion pig sticker of the neighborhood, both of them talking earnestly. I peeped out and overheard Hise say:

"'Well, Emmett, have you ever tried whaling him?'

"I was instantly interested. Father replied:

"'Why, Hise, I have whipped that boy until I am ashamed of myself.'

"It was with difficulty that I restrained my impulse to applaud.

"'His worst trouble,' Father went on, 'is that he wants to be a horse jockey, like Lem Stockman.'

"'That's the trouble with all these boys,' Hise returned, 'they get the wrong kind of fellows in their heads that they want to imitate.'

"They started out of the barn, and if I hadn't overheard Father's next remark, I verily believe I would to-day be a horse jockey. He said, 'Well, Hise, he's the only boy Catherine and I have, and we have both agreed we would rather have him in his grave over at Mechanicstown than to have him grow up to be one of those horse-jockey fellows and follow the race track all his life.'

"Instantly, I went cold, for that particular graveyard was one of my childhood horrors. I had seen them dip water out of the graves and let coffins down into the water and mud. Father never could account for the miraculous change that suddenly came over me, but from that hour I gave up my race-track ambitions forever.

"AND this made me begin to pay more attention to the right sort of heroes, which Mother and Father held up to me. Especially from the time I was nine or ten, they had held up Dwight L. Moody and John B. Gough. Mother was a helpless invalid, unable either to walk or feed herself, and she used to lie there in her bed and sing the Moody and Sankey hymns. She had me read her Moody's life and sermons aloud, until I can repeat many of the sermons now. John B. Gough was Father's ideal of a great orator, and if I have any speaking ability to-day I owe it to my parents, holding up these two great orators, until they finally became my biggest heroes.

"But no boy ever had less speaking ability to begin with than I had. It was the hardest thing I was ever forced to do. Father wanted me to speak at the literary societies and schoolhouse meetings. But I would play sick and play 'possum and run away to get out of it.

"It was just about that time that Father took me to a big farmers' picnic at Harrisburg woods and I had to speak a piece. I remember I spoke barefooted and in overalls. The orator of the day was a young lawyer from Canton, Ohio, named Atlee Pomerene and he made a great impression. On the way home Father told me to watch him, because in time, he said, he would be United States senator and maybe go higher. Senator Pomerene and I sat here the other evening and recalled the incident with great interest.

"But one night, when I was about eleven years old, there happened an incident that shows on how slender a thread a man's destiny hangs. I had to speak a piece the evening of the last day of school. The house was crowded and many could not get in. Well, I was up blazing away with a piece about a storm-tossed boat, evidently on Lake Erie, and there came a place where I had to shout above the noise of the storm, 'How far is it to Buffalo?' When I shouted this, some fellow outside yelled through the open window, 'About three miles!'

"Instantly there was a riot—yelling, whooping, fists flying, and general turmoil, and a poor frightened boy orator screaming and in tears. Only once, until I was past sixteen, did I ever again speak in public, and but for an accident at that time I am certain I would never have made a public speech again.

"That accident I speak of was perhaps the most important thing in my career: I went to the country school until I was nearly sixteen, and then went to the Augusta Normal, five miles from home.

"AT THE close of the Augusta Normal, they put on a speaking contest, and Father insisted that I enter. At last, sick and terrified, I followed his injunction. The result was crushing. I came in *last*.

"Years afterward, Frank Patterson, a banker of Minerva, Ohio, the county seat, in introducing me to a big audience, said, 'Some of you here were in a speaking contest one time with Brooks Fletcher, whom we have been trying to get here for a long time; but his schedule was filled a year ahead. In that contest, Fletcher got eleventh place. If there had been twenty-two contestants he would have got twenty-second. But you didn't go ahead, and Fletcher did, and he is here as our paid speaker to talk on 'Who is Your Hero?' and is a living example of what following the right kind of hero will do.'

"But the accident, or special providence, or whatever you may wish to call it, that made me a public speaker came soon afterward. In order to make it clear to you, I'd better explain a few facts: I tried to get a school after leaving the Augusta Normal, but everywhere they said I was too small. Finally, I got one at Chestnut Ridge. Just then, however, I had an offer as a roustabout in a hardware store at Minerva, at five dollars a week. At this job I ran errands and washed windows. One day I heard their two crack salesmen put up a bet on an old farmer down in the country. They bet that nobody could sell him a buggy. I slipped out, and by dint of passionate eloquence sold him one, and sold nine other buggies in succession—a record for that region. Later, I got dissatisfied and ran away and went to work in a delicatessen store at Alliance, Ohio, at seventeen dollars a month, with room and board. This was the last straw, and to save the family pride, an old uncle of mine induced me to leave the job and start at Mt. Union College, located at Alliance.

"During the summers, while in college, I worked in the boiler works of the steel mills at Alliance. But one evening I chanced to see an advertisement in the Alliance paper calling for someone to work on newspaper circulation. I got the job and made a house-to-house canvas, walking through the country many miles, canvassing every farmhouse as late at night as there was a light. While doing this, I wrote stories about the people I talked to, and these stories made a hit. Outside papers got to copying them—so

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

ey called me in and put me on the news d. Later, I was editor of this paper, the ›ungest editor at that time in the state Ohio.

NOW for the incident that had such a bearing on my later speaking career. ne night, shortly after I started at college, ıe of the older boys gave me a ticket to :ar a lecture at the opera house. I went › into the gallery and started to munch :anuts. Soon a tall, long-whiskered man :gan speaking. I kept on with my unching and said to myself, 'A bum ıow, no shooting, no Eliza crossing the e, no bareback riding, no trapeze, no urders nor anything. Just some old llow talking.'

"The next thing I knew, however, the ›ys were shaking me and saying, 'Wake ›, Brooks, the show's over,' and slowly came out of my trance. I never knew here that man got my attention; but ıortly after he began I suddenly forgot y peanuts, leaned forward over my seat, ıd for two hours he held me in the grip of s eloquence. The speaker was General ›hn B. Gordon and the address was his eat lecture, "The Last Days of the onfederacy." It had lifted me into a new orld. After all my false heroes, and ›underings in order to find myself, I de-:rmined that here, at last, was a real hero ıat I was going to follow if it killed me.

"And it did come near killing me. I as the joke of the college in my efforts to ›eak. I was up the next morning after :aring General Gordon, and tried to ›eak out loud all I could remember of his cture. I got myself a speech and at-:mpted to enter the college oratorical ›ntest, but they threw me out because I id not have enough credits.

"Indeed, certain members of the fac-lty looked on my ambitions as a joke. ›ne instructor called me into his study nd explained to me patiently that I was ot born with a talent for public speaking. Ie advised me to give up the idea, and urn my attention to something at which might conceivably make a living.

"But no discouragement could quench he fires that were burning within me. I sed to recite as I walked to and from the teel mills while I was working there dur-ng the summer time. One woman used to ear me saying 'Roll on, thou deep and ark blue ocean, roll,' as I was coming ıome past her house in the gray morning rom working all night in the steel mills. ›he said to one of my family that she be-ieved some day that boy would either go nsane or else become an orator. It may ›e that both her prophesies have come true.

"I was so fired by General Gordon's ›ration that I borrowed the money soon ıfterward and went down to my old neighborhood at Mechanicstown, rented the town hall, and advertised that I was going to speak, admission ten and fifteen cents. Boylike, I supposed the citizens would turn out en masse partly out of respect for my father and mother, but mainly to hear such a promising young orator. I got the disillusionment of my life. The janitor lighted the hall, and I waited and waited for the people to show up. Finally two people did come, Martha Boring, the daughter of the woman who, as a young girl of seventeen, took my father to raise, and her husband. Martha had driven miles to be there, probably sensing that she would be needed. When she saw the situation, she put her arms around me and said, 'Never mind, my boy, the time will come when they will be glad to hear you.'

"I was certainly in agony of spirit. It was my Gethsemane if a boy ever had one. Martha loaned me the money to pay the janitor, who, with his shaggy, moth-eaten old dog, and the other two people, were all that came.

"After they had gone, I walked down along by the old cemetery where Father had said he would rather bury me than have me become a horse jockey, and I repeated aloud time and again, what Martha Boring had said, 'Sometime they *would* hear me.'

"When I went up in town the loafers and street boys shouted and jeered at me and called me a college smart-alec, and all that sort of rural comedy. But I couldn't appreciate the comedy.

"I HADN'T written my mother I was coming, as I wanted to surprise her with my great oratorical triumph. No doubt I surprised her, but not as I had expected. I was too broken-hearted to go see her; but some time afterward I got a letter from my sister, saying, 'Come home, Brooks, Mother knows.' If I had not gone home just then to see my mother I don't believe I should ever again have had the heart to try to make a public speech. But I did go, and it was that long talk that day with my mother, her deep understanding of what had happened within me as the result of my hearing General Gordon, as well as her faith, that fired me again, and fixed forever in my mind the determination that some day the people would be willing to hear me.

"I went back to college with renewed courage, and the next year I went into the oratorical contest, and five judges gave me first place and one gave me second. One of the judges was a young lawyer from Cincinnati, named William Howard Taft.

"When the contest was over, I had the unspeakable satisfaction of knowing that at last I had learned how to speak."

A Correction

AN INTERVIEW with Lucian Esty and Julian Spafford, authors of the 'Ask Me Another" books, in THE AMERICAN MAGAZINE for September was ıccompanied by a series of tests. In one of these tests appeared the following question and answer: "What have the ›llowing in common: Vaseline, B. V. D., Victrola, Thermos, and Kodak?" . . . 'They are trade-names so generally used :hat they have become generic terms, and are often applied to similar products made by other manufacturers."

The B. V. D. Company, Inc., has called our attention to the fact that "B. V. D." is not a type or style of underwear, but is exclusively its registered trade-mark. Hence, the statement that "B. V. D." and these other trade-names have become "generic terms" is incorrect. We are glad to make this correction in the interest of accuracy. THE EDITOR.

At noon—each day

JAPAN TEA

Rests and refreshes

When you've had quite enough lunch today, knock off the serious business of taking in nourishment and *linger* over a cup or two of Japan Green Tea.

Business, housework, play—whatever has been waiting for you—can wait ten minutes longer.

In fact, it will welcome you twice as cheerfully when you do come back to it. For it will find you fresh and rested, full of energy for a better afternoon.

Try it today. Try it again tomorrow. After that you'll never think of lunch without it!

Japan Tea is tea at its best—tea in its *natural* state, uncolored and unfermented, with all the flavor-laden juices of the fresh leaves preserved by immediate sterilization.

Specify Japan Green Tea when you buy. Packaged for the home under various well-known brands. Several grades and prices. The best you can buy will cost you only a fraction of a cent a cup

How many are 421,000 stockholders?

An Advertisement of the American Telephone and Telegraph Company

ON OCTOBER 15th, American Telephone and Telegraph Company checks representing the 152d dividend were mailed to its 421,000 stockholders. That is the largest number of stockholders of any company in the world. The American Telephone and Telegraph Company is owned by a great investment democracy. Its dividend checks are cashed at banks in every state in the Union, by people representing all trades, stations and professions.

No institution is more nationally or publicly owned than the American Telephone and Telegraph Company, which in turn owns more than 91% of the common stock of the operating companies of the Bell national System. The average holding is 26 shares, and no one person owns as much as 1% of the total stock.

The Bell System was developed in the interest of telephone users and is owned by the public that it serves.

STATEMENT of the ownership, management, circulation, etc., required by the act of Congress of August 24, 1912, of The American Magazine, published monthly at Springfield, Ohio, for October 1st, 1927, State of New York, County of New York—ss.: Before me, a notary public in and for the state and county aforesaid, personally appeared A. D. Mayo, who having been duly sworn according to law, deposes and says that he is the Business Manager of The American Magazine and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management (and if a daily paper, the circulation), etc., of the aforesaid publication for the date shown in the above caption required by the act of August 24, 1912, embodied in section 411, Postal Laws and Regulations, printed on the reverse of this form, to wit: 1. That the names and addresses of the publisher, editor, managing editor, and business manager are: Publisher, The Crowell Publishing Company, Springfield, Ohio; Editor, Merle Crowell, 250 Park Avenue, New York, N. Y., Managing Editor, James C. Derieux, 250 Park Avenue, New York, N. Y.; Business Manager, A. D. Mayo, 250 Park Avenue, New York, N. Y. 2. That the owner is: (If owned by a corporation, its name and address must be stated and also immediately thereunder the names and addresses of stockholders owning or holding one per cent or more of total amount of stock. If not owned by a corporation, the names and addresses of the individual owners must be given. If owned by a firm, company, or other unincorporated concern, its name and address, as well as those of each individual member, must be given.) American Lithographic Co., New York, N. Y.; Bankers Trust Company, Trustee for Anna Wright Hazen, New York, N. Y.; Bankers Trust Company, Trustee for Ella Gardner Hazen, New York, N. Y.; Bankers Trust Company, Trustee for Dorothy Hazen Soest, New York, N. Y.; Employees' Savings and Profit Sharing Pension Fund of The Crowell Publishing Company, New York, N. Y.; Estate of Louis Ettlinger, New York, N. Y.; Gardner Hazen, New York, N. Y.; George H. Hazen, New York, N. Y.; Gertrude B. Lane, New York, N. Y.; Anne Payne Maxwell, New York, N. Y.; Publication Securities Corporation, New York, N. Y.; Mrs. Margaret R. Thompson, New York, N. Y.; Samuel Untermyer, New York, N. Y.; Alanson H. R. Wilson, New York, N. Y. 3. That the known bondholders, mortgagees, and other security holders owning or holding 1 per cent or more of the total amount of bonds, mortgages, or other securities are: None. 4. That the two paragraphs next above, giving the names of the owners, stockholders and security holders, if any, contain not only the list of stockholders and security holders as they appear upon the books of the company but also, in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting, is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustee, hold stock and securities in a capacity other than that of a bona fide owner; and this affiant has no reason to believe that any other person, association, or corporation has any interest direct or indirect in the said stock, bonds, or other securities than as so stated by him. 5. That the average number of copies of each issue of this publication sold or distributed, through the mails or otherwise, to paid subscribers during the six months preceding the date shown above is——(This information is required from daily publications only.) A. D. Mayo, Business Manager. Sworn to and subscribed before me this 28th day of September, 1927. (Seal.) Mary L. Walker. (My commission expires March 30, 1929.)

NOTE.—This statement must be made in duplicate and both copies delivered by the publisher to the postmaster, who shall send one copy to the Third Assistant Postmaster General (Division of Classification), Washington, D. C., and retain the other in the files of the post office. The publisher must publish a copy of this statement in the second issue printed next after its filing.

War Drums

(*Continued from page 55*)

He seemed not to hear her. At a gulp he drained his glass, filled another and drank that also. He cleared his throat and opened his lips to speak, but she cut him short.

"I have something to tell you," she said quickly, "and I must ask you to listen to me now. I do not know whether this illness which affects you like palsy is real or feigned, but I know that you give way to it only when you wish to work upon my sympathy. I think you have begun to realize that there is in me no particle of pity for you, and that, therefore, you will try some other way if I remain longer in this place. I shall return to Charles Town to-morrow."

Stanwicke smiled. Seeing that smile, Lachlan realized that his first surmise was mistaken. The man was not drunk. When he spoke, his voice was deeper and steadier and his hands no longer trembled.

"My dear daughter," he said, "and how shall you return to Charles Town if I do not choose to send you there?"

She started and stepped back a pace. "You would not dare keep me!"

"You are my daughter," he replied suavely. "You are still my daughter, although for fifteen years you have not chosen to honor my poor house with your presence. Now that you have come to me at last, it is both my duty and my privilege to take care of you, to protect you, to compel you, if need be, to do what is necessary for your well-being."

SUDDENLY his gray face flamed red. He brought his hand down upon the table with a crash.

"Listen, my pretty," he said, and it was passion which now shook his voice. "I am done with soft words. You are not in England now. You are not even in Charles Town. You are at Stanwicke Hall, and here my word is law. You did not know, when you came to me after all these years, what manner of man I am. Well, you are learning now; and you will learn that I will be obeyed!"

Something in the girl's face added fuel to his rage. He spat out an oath, and the flush in his cheeks darkened.

"You can be obstinate—you have shown me that," he cried hoarsely. "You have no love and no pity for me, your father, and you care nothing for the honor of my name and yours. I have asked little. I have asked only that you treat Captain Falcon with ordinary civility. You have refused. Well, I am not to be ruined by your obstinacy. If it were left to me, I would know how to deal with you, but he does not desire that—yet."

Again he paused for breath. Jolie Stanwicke, eyes bright with anger, bosom heaving, opened her lips, but he cried her down.

"I owe you nothing," he screamed, leaning far forward in his chair, his voice again shrill and tremulous. "You are my daughter; but for fifteen years you have kept away from me, preferring England and your mother's kinsfolk there. Heaven knows I did not ask you to come; but now that you have come, you will lie in the bed

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

make for you. Who are you to thwart me? Why should I let Falcon destroy me because of your mad infatuation for this Garradell, who, I tell you, is dead in the wilderness? You will stay here, here at Stanwicke Hall. And when Captain Falcon comes—"

His words ran suddenly together, became an unintelligible jumble of low sounds. The color drained from his face; his eyes widened, stared fixedly past the girl. Slowly, very slowly, as though the arm were made of lead, he raised his right hand and pointed.

"Good God!" he whispered hoarsely.

Jolie Stanwicke turned quickly, uttered a low cry, and jumped away from the table. Lachlan saw that Stanwicke was pointing at something on the table, but the girl intercepted his view. He moved noiselessly through the darkness of the porch to the other side of the doorway.

He saw then that the thing at which Stanwicke pointed was a huge, yellow, barred, and speckled spider moving along the table straight toward the pallid, staring man, who sat slumped in his chair, his trembling arm still raised.

Slowly that arm sank until it rested on the table; and slowly, steadily, the monstrous spider came on. Jolie Stanwicke stood as though turned to stone. Over Lachlan, also, there swept a sudden surge of horror. He knew the golden spider well, had admired a hundred times the shining golden disks which it spun in the woods. Despite its great size and its ugliness, he had never feared it before; but fear and loathing held him rigid now.

The thing never swerved, never paused. Slowly it moved along the table straight toward Stanwicke's hand resting on the table's edge. The hand did not move. Lachlan, staring in new horror at Stanwicke's colorless face, saw that the man was past movement, past consciousness.

The creature's hairy legs touched the fingers; the swollen, mottled body mounted upon the back of Stanwicke's hand. There it halted, its long, hairy legs spread wide; and as it sat there, its great, bloated, spotted body moved up and down, up and down, as though the creature were sucking blood.

IT WAS Almayne who broke the spell of horror that had been cast upon them all. With a low cry, he sprang through the doorway into the room and, snatching off his cap, swept it across Stanwicke's hand. The huge spider fell to the floor. Almayne crushed it with his heel, then bent over the man in the chair. Meanwhile, Lachlan had leaped to Jolie Stanwicke's side and had grasped her arm, for she stood swaying perilously.

"He is not dead," said Almayne. "It is a swoon, I think. Quick, some wine!"

Jolie, freeing her arm from Lachlan's grip, filled the glass and handed it to the hunter. In silence they stood and watched the life come back to the man they had thought gone forever. The eyes opened, stared dully; the lips moved. Suddenly Jolie Stanwicke turned to Lachlan.

"Thank God, you have come!" she said in a low steady voice. "Take me away."

They waited only long enough to allow the girl to run to her room and slip into some garments better fitted for a journey through the woods. And even this short

delay was a mistake. They had believed Stanwicke to be still helpless from shock, but suddenly, while their backs were turned for an instant, he was out of his chair and half way to the closed door leading to the rear. They overtook him when his hand was reaching for the door, and Almayne's palm across his mouth choked the cry which would have summoned his servants.

They got him back to the chair, and, first gagging him securely, bound him to his seat with a bell rope cut from the wall.

Jolie, returning, stood for a moment looking down at him, while he glared up at her, hate blazing in his eyes. The cord was tight. Jolie stooped and loosened it; and Stanwicke, suddenly swinging his bound legs sideways, almost knocked her from her feet.

With a little sob, she jumped back from him, turned, and, without a glance behind her, passed out of the door opening on the porch, Lachlan at her heels. A moment later Almayne followed them—after tightening again with one deft and savage jerk the cord which Jolie had eased.

OUTSIDE it was now pitch-dark. There were no stars. Swiftly they moved around the south end of the house, the girl walking between the two men, each of whom gripped one of her arms. She was like a blind woman in that utter blackness, but the men with her moved swiftly, unhesitatingly, and she went forward between them, stumbling seldom.

Presently Almayne spoke briefly to Lachlan, handed his rifle to the younger man, then, with a "By your leave, lady," took Jolie in his arms. For perhaps two hundred yards the tall hunter carried her thus, placing her on her feet again when they had left the thickets behind them and had come to open pine forest where no underbrush grew beneath the trees. She went forward, as before, between the two men, speaking no word. Somehow she realized that, although these men apparently had eyes that could see in the dark, they needed all their faculties to guide them through that maze of pine trunks, which to her eyes were all but invisible.

Thus they came, with scarcely a word spoken, to the place where the horses were tethered. Here at last Almayne's gruff voice broke the silence.

"You can walk very well for a woman, Mistress," he said. "Now, can you ride?"

His tone was a challenge. He was seldom at pains to disguise the contempt he had for women.

"I can ride," she answered shortly, and they helped her to mount, then swung to their own saddles.

"A loose bridle, Mam'selle," said Lachlan. "Your horse will follow in the track of Almayne's." With the hunter leading the way and Lachlan in the rear, they began the second stage of the night's journey.

As before, they traveled in silence, save for a whispered inquiry now and then from Lachlan regarding her comfort. Had she been dying of fatigue she would not have confessed it in Almayne's hearing. There was a question which rose again and again to her lips, but she never uttered it. Still their way led them through unbroken woods; but after an hour or so they came out into an open space, and directly ahead

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

e saw a light glimmering. They rode ward this light over boggy ground where arsh grass or tall rushes brushed their rses' flanks, and came presently to a all hut at the edge of a river.

"It is the ferry, Mam'selle," Lachlan ld her, "and the flatboat is ready, for e are expected. We must dismount now. nce we are across the river, we can rest while."

A white man and a negro operated the atboat, and there was room on the umsy craft—built for the accommotion of plantation wagons and coaches for all of the three horses as well as their lers. Almayne and Lachlan manned the tra sweeps and the broad, placid stream as quickly crossed. They remounted e horses and rode on for perhaps a halfour, at first following a winding road, it soon turning to the left into the woods.

FAR away Jolie heard the hunting cry of a wolf pack, and shivered, although e could only guess what the sound was. was inexpressibly wild and strangely erce, but she held her tongue, and arned that wolves were abroad only hen Almayne growled some comment on e increase of these animals.

She was cold and hungry. She wonered what had become of Lachlan's romise of a rest once the river had been ossed. As if in answer to the thought, he oke to Almayne, and they halted, disounted and helped her to alight.

"We are safe, now, I think," he said. On this side of the river they could not ell what course we would take. We will ave a fire and something to eat."

The warmth of the fire, the sweetened ornbread, the wine from Lachlan's flask ispelled her fatigue. Always she had ved the open, had found delight in irds, trees, and the things of earth. For l its slimness, her body was well-knit and ery strong, and in England riding had een her favorite pastime, so that this ight's ride had tired her little.

A strange exultation mounted in her. he hunting wolves, though still far away, ad drawn somewhat nearer. Their oices made music, savage and unearthly, ut softened by the distance. The glow om the fire turned the massive pine unks to bronze and the hanging Spanish oss to silver.

She was not afraid. Somehow, all this eemed fitting, natural, vaguely familiar. ver and over again she had pictured ome such scene as this midnight forest, onstructing it out of vivid details in he letters which Gilbert Barradell had ritten to her after his coming to America.

Almayne was busy with a loose saddle irth; Lachlan was adding fuel to the fire, nd in the brief interval since they had alted few words had been spoken. achlan rose and stood before her where he sat at the base of a gigantic pine.

"Mam'selle," he began.

She checked him with a gesture. She ould wait no longer to ask the question hich a dozen times that night had been n her lips.

"Some nights ago, in my father's garlen," she said, "a moment before you vere struck down, you told me that Gilert Barradell was alive and that you vould go to him. You will tell me more bout him—about Gilbert—before we peak of any other thing?"

Have You a "Chief Guesser" in Your Business?

The experience of hundreds of the country's foremost Purchasing Executives has been crystallized in a new book—"Purchasing Department Procedure," a copy of which will gladly be sent at your request.

THERE is a theory handed down to us from preceding business generations that a purchasing agent is a shrewd guesser who can make speculative profits.

If this is true, then his proper title should be "Chief Guesser" or "Director of Speculative Ventures."

But, it is not the function of the purchasing agent to gamble with his firm's money. It is his business to study needs and supply them continuously without waste. The more he knows about your needs and means of satisfying them—the more valuable he will be.

The Remington Rand man is particularly anxious to meet your purchasing department head. Back of his knowledge of markets and purchasing procedure lies an organization in daily contact with thousands of sources of supply. Associated with him are 4,000 other business specialists.

That meeting may well be a mutually profitable one! It may be arranged through the coupon below.

BOYS!
Get your FREE Copy of the Daisy Manual from nearest hardware or sporting goods dealer. It tells how to be a crack shot!

The Training Your Boy Should Have

A *boy's* man, and a *man's* boy—how wonderfully well they get along together!—especially in the clean-cut rivalry of target practice.

Deep down in your heart, don't you believe that nothing is more important than the training of your son? Your own companionship in his sports—that is the best possible guidance for the growing boy. Spend more time with him at rifle practice, too—and you'll be truly gratified by the results.

Perhaps your boy has shown you the messages he reads—letters from leading athletes—saying that "target practice makes vision, nerves and muscles click together." It's true!—as shown by the excellent training which millions of boys have received with Daisy Air Rifles the past 40 years.

The rifle illustrated is the famous Daisy Pump Gun—a 50-shot repeater for $5. Ask your dealer to show you this, and other Daisy Air Rifles, a model for every age, from $1 to $5 or sent direct upon receipt of price.

Look for the funny fat man on the Red Box

"He is a prisoner," Lachlan replied, "in the town of Concha, Chief of the Appalaches, on the borders of the Spanish country of the Floridas. He is safe for the present; but there is one who hates him, and we must lose no time. We must go to him at once and attempt a rescue."

"When you go," she said quietly, "I will go with you."

Almayne had come up and stood close behind Lachlan.

"D'ye know what that means?" he asked brusquely. "Hardships, dangers, long weeks in the rough wilderness—enough to try the body and soul of a strong man."

"I am strong," she replied. "I am not afraid. I will go!"

The hunter slapped Lachlan between the shoulders.

"By Zooks!" he exclaimed. "You were right, lad, after all."

THEY rested an hour by their fire in the forest. The wolves scented them and made a circle around them in the gloom, invisible except their glittering eyes; but the two men gave them little heed, and Jolie knew, without asking, that there was no danger. There was much to be said and the hour passed quickly. Jolie heard the story of Lachlan's adventures on the "Good Fortune"—all, that is, which Lachlan felt free to tell her in view of his compact with Lance Falcon. The tale, thus expurgated, puzzled her at times; but she restrained her curiosity and sought no further explanation. Nor did she ask Lachlan about himself, although to her he was still a mystery. She learned that they would join Jock Pearson's pack train next day at a point agreed upon, and she heard, without much interest (for the fact seemed to her of slight importance) that Jock Pearson's wife would be with the train.

On her part she said but little at first, and Lachlan asked no questions of her. But a remark of Almayne's brought from her certain facts. The hunter had kept silence, but when Lachlan had concluded the story of his adventures Almayne put in a word.

"You will give my young friend credit, Mistress, for one thing," he said, "and I know not whether he will be glad or sorry for it hereafter. It is he that is bringing you on this journey into the wilderness. I should have left you at Stanwicke Hall or, since we've got you out of there, I would now take you to Charles Town. He was of the opinion that you had best come with us and that you would wish to come. I said that, being a woman, you would be afraid."

"He was right," said Jolie quietly. "I am not afraid of the wilderness. I could not remain at Stanwicke Hall, and there is no one in Charles Town who could keep me safe.

"You do not think it strange, do you," she continued in a low voice, "that I left my father as I did—without farewell, without pity for his plight? The fear of Falcon hangs over him like a sword, and at times it seems to stab his very soul, and he shakes as if with palsy. Oh, I pitied him at first, and I tried to do what he asked, so that Falcon would not be angered. But when I realized what he expected of me, what he would presently force me to do, then pity died in me."

Digitized by Google
Original from STATE UNIVERSITY SYSTEM OF FLORIDA

"He is a black-hearted villain," Al-ıyne exclaimed, "and you are well rid of n! I like plain speech, Mistress, and w I would ask a plain question. Cap-ın Falcon desires you, and to save him-f your father would give you to him?" She nodded.

"I am not such a fool as I look," the ınter grumbled apologetically. "Long o I guessed it. But I was ever a ıngler with women and I wished to be re."

He jabbed the fire with a pine branch. "This Falcon, now," he continued flectively, "he is something of a man in s way. He will not give up easily. I ink we shall hear from him before our urney is over!"

THE moon showed her face as they re-mounted, and suddenly the forest was ıthed in ghostly light. For hours they ıde on slowly but steadily, Almayne in ıe lead. By the magic of the moonlight, ıe forest, which before had been hideous ıd menacing in its blackness, was trans-rmed to soft and silvery loveliness. hrough this shimmering beauty they ıssed in silence, their horses' hoof-beats uffled by the thick carpet of pine straw.

Once, Jolie, glancing down a dim forest sle between rows of column-like pines, ıw a great beast that was like a lioness tting on its haunches, staring fixedly ith eyes which were glowing coals—a anther, Lachlan called it; and once, just ı front of them, there was a sudden com-ıotion in the moonlit woods, a bellowing s of bulls, a tossing of sharp, curved orns, a confusion of big, dark bodies ırching upward from the ground and ocking away amid the crowding trees.

At this Jolie cried out in excitement, elieving that she was looking for the first me on that half-fabulous beast, the uffalo; but Lachlan laughed the notion way.

"Black cattle," he said, "wild black ıttle, strays from the plantations. We'll e no buffalo till we have passed farther ıland."

The forest seemed endless. At dawn ıey came to a deep, narrow river flowing uggishly through the woods. Without ause, Almayne rode his horse down the teep bank into the water. As the animal egan to swim, Jolie saw the hunter turn nd throw a curious glance behind him. he flushed as she realized the meaning of hat glance, and her horse was half way own the bank when Lachlan rode for-vard and grasped her bridle.

"Wait, Mam'selle," he said, and she ıoticed that he was frowning as though ngry. "There is a boat on the other ank. Almayne will bring it presently. Ie should have told you."

"He thought that I would be afraid—hat I would not venture," she said uickly, and jerked the horse's head the ther way, so that Lachlan lost his grip on he rein. Next moment her horse was in he water, swimming.

She was wet to the shoulders when they eached the other bank. There a trail sloped up from the water's edge and wound into the forest, and without a word Almayne led the way along this path. A quarter of a mile farther on, he halted suddenly, and swung around in his saddle.

"I am both a fool and a brute, Mistress," he said very humbly. "It is my

Overcoats *for* FEET!

WHEN chilly winter days are here, and men are bundling into woolly overcoats, why should their *feet*, where circulation is the poorest, rely upon an ordinary sock, and cold, stiff leather to protect them from the cold?

It takes a *real* sock to keep your toes in snuggly comfort on a biting winter day. Iron Clad No. 212 *is* a real sock. Not a thick, bulky sock, but a luxurious, fleecy one, closely woven of the finest mercerized cotton and the softest worsted yarns, to shut out every bit of cold.

Iron Clad No. 212 is a *good-looking* sock in the most attractive two-color combinations—a splendid idea for a Christmas gift. Iron Clad No. 212 is a *powerful* sock that will wear—and wear—and wear. With every pair there goes a guarantee of satisfactory service or a brand new pair of hose. Ask for this sock. If your dealer can't supply you, send us your remittance, and we'll send your socks *direct*. State colors and size (9½ to 12, 50¢ a pair.)

fault that you are wet and cold. I did not think that you would have courage to swim the river."

She laughed at him, finding a strange joy in her triumph.

"You will know me better presently, Mr. Almayne," she answered. "I shall make it my pleasure to teach you something about women!"

He glanced at her sharply, and rode on without replying. An hour later she heard the voice of a man singing somewhere ahead of them, and the neighing of horses; and Lachlan, riding abreast of her, said, "It is the camp, Mam'selle, Jock Pearson's camp. You can rest and sleep."

She turned toward him and he saw with surprise that her face was very white.

"I am glad," she whispered. "I think I could not have ridden much farther."

She swayed suddenly in her saddle. For a moment her body leaned against his, her hair brushing his cheek. With his arm about her shoulders, he steadied her, kept her from falling; but almost at once she seemed to recover her strength and drew away from him, sitting upright as her horse walked forward, a slim, straight figure, head high, shoulders back. Lachlan realized with vague astonishment that he was trembling like a reed in the wind.

(*To be continued*)

THE VITAL SUBJECT of church-going, which is exercising the minds of both clergy and laity, will be thoroughly discussed next month by Edgar A. Guest and W. O. Saunders. Guest's article on "Why I Go to Church" is a sincere presentation, which gives searchingly and honestly his reasons for attending church. No less sincere and honest are W. O. Saunders' reasons for staying away. These two articles will furnish both food for reflection and rich material for discussion during a long time.

The Time to Teach a Child and the Time to Leave It Alone

(*Continued from page 25*)

He tells truth, at that. This is the time for statements of facts, for repetition, for drill, for simple truths. May the educational saints forgive us for trying to impose organized systems and carefully knit theories of this and that science upon children at this age.

During this period the child seems to repeat the history of the race, as though reviewing the past and selecting the best for himself before starting out on his own adventure. You will find him showing traces of tastes and tendencies unlooked for before; he has sharp likes and dislikes; he has spurts of interest, glimpses of talent now in one direction, now in another.

Each of these phases is to be allowed to come to full power in its turn. If he drops music after studying it for a couple of years, do not count it a total loss. The power changes to another form, and he follows the next vein of growth. This is not a defect of purpose or will. At this stage his mind is churning over his inheritance to bring the best of it to the top. Purpose and will come later and are not seriously concerned just now.

A boy's will is the wind's will,
And the thoughts of youth are long, long thoughts.

It is the boy's will at present. The long thoughts come later with adolescence.

In childhood we teach the rigid fundamentals of character. It is here we teach honor and truth and loyalty and self-sacrifice. It is now that these are simple facts to be taken as they stand. Later they will not appear so simple, but their original status will remain. It is now the child learns his creed, his catechism, his code; whatever framework of his moral being you would erect must be built in now. Soon adolescence will be upon him, and the personality is born and sets out on its destined way.

"What can we do with Sandy?" a distracted mother once asked me. "He's just past twelve, but if he goes on as he has been going for these past three months he won't have a friend in the world by the time he is seventeen. Indeed, I'm afraid someone will murder him. In their hearts, anyway.

"When he was a youngster of eight, nine or so, he used to tell the most gorgeous lies. Nothing was too big a stretch for him. He would look you straight in the face and tell you the most outrageous falsehood without a blink.

"Suddenly, overnight, he changed. Now he is a terrible truth-teller. We are afraid to have him in the room if there is a visitor present. It's, 'No, Mother. It wasn't Monday afternoon. It was Tuesday morning.' 'No, you didn't tell him he couldn't do it; you said you would rather he would do something else.' 'Why, Mrs. Smithers, that isn't what you said a'tall. Don't you remember, Bennie and me were out on the porch when she came in, and you told her you were so glad she had come to live there, and after she went out you said to Bennie that you wished she would stay where she belonged.'

"Imagine our feelings! No hints, no coughs, no nudgings have the slightest effect. On he goes to the bitter end. The neighbors just endure him and inwardly hate him, I know. What can we do?"

"Grin and bear it," was my answer.

The lad has reached ahead into adolescence and brought back with him an adolescent characteristic. He has a burning desire for truth and an ideal to serve, but his childhood is still upon him and he speaks as a child. Soon the growth will even up and discretion dwell on impulse.

To childhood a fact is a fact and a lie is a lie, and there is no in-between ground. Truth is truth, with no subtle shading, no shrouded values to trouble his crystal-clear mind. The complicated relations of this life, the delicate quivering balance between right and wrong do not exist for him. A thing is, or it is not.

DRAWING turns INK to GOLD

THE small crude sketch (1) was drawn by Herschel Logan before he had Federal School training. The large drawing of Lincoln (2) shows his recent work. Note the improvement. Today his drawings are seen in National Exhibits. Recently he made $100.00 over his regular monthly salary. He says, "Any average fellow with the same instruction should be able to accomplish similar if not greater results."

Opportunities for artists have never been better. Publishers buy millions of dollars worth of illustrations every year. The Federal Home Study Course has been prepared by over fifty of the nation's leading artists. If you like to draw, cash in on your talent. It's easy to learn the "Federal Way." You may have talent lying dormant in you, just as Logan had. Our free Vocational Art Test will find that out. Send for it today.

Federal School of Illustrating

1,000 Hotel Positions Open!

HOTELS, restaurants, clubs, apartments, schools, colleges, hospitals, institutions everywhere, need trained men and women. Over 70,000 high-class positions paying $2,500 to 10,000 a year are open each year in the hotels of the United States. Nearly one and three quarter billions of dollars' worth of NEW HOTELS, CLUBS and INSTITUTIONS being built this year will need 200,000 trained men and women. Hotels start you at salaries up to $3,500 a year, with living usually included. At any time there are over 1,000 hotel positions open.

Previous Experience Unnecessary

You can have one of these fascinating, big-pay positions. The Lewis Schools guarantee to give you the valuable knowledge that it has taken some of the most successful hotel men years to obtain. Age is no obstacle—young and old alike have equal chance for success. Past experience absolutely unnecessary. A common school education is all you need. We train you in your spare time at home with the Lewis Simplified Study Plan, and put you in touch with big opportunities. All of your training under the personal direction of Clifford Lewis, Managing Consultant for over 225 hotels throughout the United States. Our students employed by leading hotels everywhere.

Send today for FREE BOOK, "Your Big Opportunity", showing how we can train you for one of these splendid positions, and explaining our Money-back Agreement.

Let him have, too, a routine that will help his habit formation, for this is habit-forming time. When I made such a statement to the mother of one of our pupils she was amazed.

"Habit-forming time?" she exclaimed. "For ten years I have tried to teach that child the simple routine of daily living; rising, bathing, dressing—with a little attention to such delicate matters as teeth and nails and hair—all to no purpose. If I didn't stand over him he would go to bed without undressing and start for school without ever washing his face."

Well, nobody promised he would. Not yet. He will wash only to the limits set by cuffs and ears, unless prodded to go further. He will not hang up his coat, fold his night clothes, open his window, wipe his feet at the door, say "please," unless reminded and even ordered to do so. Don't be afraid to give childhood orders when necessary. This is the stage where orders are essential and obedience obligatory. The children like order and routine, and respect those who exact it from them and who practice it themselves. A child soon complains of the slack teacher and praises the one who "makes you work."

There is little difference between boy and girl at this time. Both are untidy and careless, inaccurate, forgetful, heedless, dependent upon the will of others to strengthen and guide their own awakening will and purpose. All of a sudden, one day you catch a new tone, a new firm glance, a glimpse of thoughtfulness, and you have the thrill of knowing that the years of teaching have at last borne fruit.

The boy who used to mistake toweling for the whole of the washing process now takes possession of the bathroom to the exclusion of anyone else. He comes out, with an injured air, to inquire if there can't be enough warm water to rinse a fellow. He reprimands Bettie for using his nail file and lectures her at length upon the sin of using another's property, although at that very moment he may be wearing one of his father's ties.

Of a sudden, Bettie, who bit her nails until you were about beside yourself to see their condition, goes in strongly for nail polish and lotions, and borrows your scissors and files and lines up a row of mysterious bottles on her little table. She spends long periods before the mirror, and asks anxiously if you think blue suits her or is a subtle tint of old-rose better?

BROTHER and sister are much alike in mood these days. Both cry easily about nothing at all, both dream over their books, both are trigger-tempered and given to flights of idealism that are likely to reflect upon the conduct of their elders. They play and work beyond their strength, they pronounce strong opinions, argue endlessly, ride high on the crest of life's wave. They have arrived at the threshold of Youth, the golden time of their lives.

Now we must tread warily and the type of our teaching must change. It can no longer be the direct, straightforward, unvarnished fact; it must be indirect and suggestive and subtle. The adolescent has passed the stage where orders, set plans, dependency, are acceptable. His individuality has blossomed, and it must have freedom to grow on its own power, or die. In other words, it is close to the time when parents and teachers must

Retire in 15 years

on your Present living Budget

by investing in safe 6½% First Mortgage Bonds

Follow the definite plan given in this book, and your financial independence is won.

The plan works just as surely, whether you are now earning $1,000 or $100,000 a year.

The way is certain—each step plainly indicated and absolutely safe—independent of luck, business genius or speculation.

Every fact has been harvested out of the 46 years' experience of Cochran & McCluer in the first mortgage investment banking business.

The plan is so simple, anyone can understand it—so definite anyone can follow it—and so certain, no one can fail.

In addition to the Financial Independence Plan and the unique budget schedule, the book gives suggestions that enable you to enjoy more of the good things of life, both while building your independent fortune and after you have attained it.

We invite the most skeptical to read this plain, straightforward, interesting book.

Send coupon. We employ no salesmen, therefore none will call.

allow the new man or woman to strike out for himself.

That is very difficult for parents to accept, especially for Mother. Most mothers want to hold fast to a child long after nature has matured him and shoved him out. He must go. He must loosen the bonds that tie him to home, and he must put the lessons and the experiences of infancy and childhood to the test. He must find himself, and his elders must take their hands off and bid him Godspeed. It is at this point that Youth often meets tragedy. The struggle between Youth and Age is as old as the race. It would be less bitter if this period were better understood and recognized for what it is—the fruition of childhood's teaching. It can be accomplished in the home if the parents are willing, but it will be accomplished outside the home if they are not. Get ready, then, to free the children spiritually and physically, as the time draws near.

"I CANNOT do anything with Arthur," a father said to me. "All through grammar school we helped him with his lessons and he got along fairly well. Now he is in high school, the last class, and he refuses to go any longer. He studies nothing, does nothing. He says he wants to go to work, but he doesn't know what he wants to do. He can't do anything because he does not know anything. What can you do with a boy like that?"

"He says he wants to go to work? Why don't you let him?" I asked.

"He can't work. He is only a child after all. What's eighteen? He hasn't a job and there's nothing in sight for him."

"Better let him try what he can do for himself. Let him go to work and learn his limitations. Let him support himself on what he earns and do not help him. He must try himself out," I insisted.

But Arthur's mother did not want to do that. She still wished to shield and protect her boy, after the time when such protection and shielding was doing harm. Arthur idled about for a few weeks until his father said, "To-morrow you get a job and start work, no matter at what."

Next evening Father said, "Got a job?"

"No. I had one and I lost it."

"You had a job and you lost it all in a day! How?"

"Cox's wanted an advertising clerk and I filled out an application, and when Mr. Cox saw that I was not twenty-one he tore up the application.

"Then I came home," explained Arthur. "But I guess I can get a job to-morrow at Curley's express. Ham told me they wanted a boy."

"Well, how about a job to-day?" asked the father next evening.

"I got the job at Curley's, but I wouldn't work for them. They wanted me to carry boxes all over the place and all over town. I'm no horse. That's what they need. A horse. I'm no horse."

"I see. What now? You have to get work, you know."

"Oh, I'll get work all right. I'm going to answer the ads in the morning paper."

Time went by, but Arthur got no job. Each day his father asked what he had done, and each day he made his blithe report of nothing doing. Father got him work but he stayed only three days. The boss was "too overbearing and expected too much for his money, and didn't care what he did to fellows who worked for him."

Then the boy decided to go far afield in search of adventure. "Dad, can I have the old flivver?" he asked.

"Yes, for twenty-five dollars."

"Gee, then I'll have to take money out of my bank account."

"That's what I have to do," his father said. "The only difference is that I earn the money first and you don't."

"Well, you wait. I'm going to. Me and Fletcher are going to Florida and work. There's lots of work there."

So Arthur and his chum polished up the old car, packed their bags, and with a hundred dollars from the bank account started for the South. Arthur was gone for two years. At the end of that time he came home in a battered flivver, twin to the original one, with exactly a hundred dollars in his pocket, the old suit case minus straps and locks—and a purpose.

His appearance was different. Where he had been soft and flabby he was firm and strong; where he had been wavering he was sure; where he had been aimless he had a purpose and a plan.

"I'm coming back to go to school and college," he announced. "The head of my section in the factory said there was a good opening for me if I had technical training. I'm going to go to school and college and get it. I can work my way easy enough."

Mother wanted to pay his tuition, but Father said not so.

"If you take the responsibility from him, what is there left?" argued Arthur's father. "Let the boy alone and he will work out his own life. Give him a chance. He'll go ahead and make good on his own." And he did.

BUT not all parents are so wise as this father. Many times the father is so busy earning money to support the family that the only time he knows about the children is when there is another bill to pay. He leaves them to their mother, and does not "interfere." Mother is usually able to manage, but now and then she needs help. When she does not get it, the trouble comes. Especially where there are girls in the family should Father take a working interest in their welfare. Girls are often smothered in the wrappings of home, and Father could lend a helping hand if he would.

A vivacious girl of my acquaintance had a hard time being herself because of her mother's zeal to protect her.

"Speak to Mother, won't you?" she pleaded. "I'm eighteen. I've been graduated from high school and am now in my first year of college. My mother will not let me move. I cannot have a boy come to the house. I cannot go to an evening party without a scene.

"I live in an atmosphere of suspicion. Mother opens and reads my letters, and uses her own judgment as to whether she will let me see them or not. Silly little notes that the girls write me are interpreted as plots—something going on behind her back. I am afraid to have the girls at the house because she is likely to tell them what she thinks, and that is always to one's discredit.

"She keeps me dependent upon her for every cent. I cannot even buy an ice-

"For FIVE every day needs of a man"

"Handiest thing in the house"
Said 2000 wives

MEN are great users of 'Vaseline' Petroleum Jelly", say their wives. Each man should have a tube in bathroom, or workshop, or garage, or barn, or club locker for his own use. Here are favorite masculine uses —

For lubrication—With almost any kind of machinery, garden or farm implements, "Vaseline" Jelly is an excellent lubricant. Easy to use. Handy to keep ready.

Radio, and automobile batteries—Applied to connections on radio and automobile batteries it prevents corrosion.

For sporting equipment—Golf clubs, guns, skates, etc., should be coated with "Vaseline" Jelly before laying away for the season. It protects them from rust.

To soften hands—"Vaseline" Petroleum Jelly softens cracked hands, and relieves chapping. Any man who does manual work needs it.

To treat the hair—Once a week or more often if scalp is dry, massage with "Vaseline" Jelly before the shampoo. To slick the hair and give it gloss, dampen slightly, apply a tiny bit of "Vaseline" Jelly with the palm of the hand, then brush vigorously.

"Vaseline" Jelly is on sale everywhere. In tubes, jars, tins. Men like the handy tube. And remember when you buy that the trademark "Vaseline" on the package gives you the assurance that you are getting the genuine product of the Chesebrough Manufacturing Company, Cons'd.

Write for free booklet of uses. Address Dept. A 12-27, Chesebrough Manufacturing Company, 17 State St., New York, N. Y.

PETROLEUM JELLY

cream soda unless I ask her for the money and tell her what I used it for. I wanted to earn some money by working in one of the offices in town, but she made an awful time about it and said I was doing it only to escape from her supervision, and that I wanted to be independent of home so that I could go out nights and do unutterable things.

"Talk to her. I can't. Tell her that if she does not allow me some measure of freedom I will run away. I must. I must have a chance to live, to think, to work, to get acquainted with my own mind. I have had to live on Mother's mind so long that I'm losing the little I had. Talk to her, and tell her what she is doing to me. It is not that I do not love her. I do. But I must have a chance to live and to grow."

ADOLESCENCE is the flood time of life. There is no sense in trying to dam life as this mother was doing. It will surely spill over the dam. You parents should take your hands off the children, and let them go free when they demonstrate the desire and the power to shift for themselves. To hold them longer is to distort nature and check their growth mentally and physically and morally.

The adolescent is eager to explore his spiritual self. He is beset by doubts and questions. This is the time, then, for the explanations and the reasons, the time to answer the why and the wherefore. Religion stirs the adolescent deeply and sex is a vital matter with him. Life and its relations in school and industry and church and neighborhood are of absorbing interest, and he probes them well. Don't dodge his questions, but meet them honestly.

In trying to make things clear do not be dogmatic. Youth shuns the one who thunders from the mountain top. Be gentle and patient. When the youth or maiden of seventeen tells you confidently that there is no God and he has proved it, instead of fainting away listen gravely and say, "I believe in God the Father Almighty, Maker of heaven and earth. I too have proved it," and keep on living your belief before the groping child. You can't reason about God. Don't try.

This is the high tide of altruism. Remember, it was Youth that led the world's crusades, and set the children to serve those about them. Fill their time to overflowing; push responsibility upon them. It is the time for responsibility above all else. They are longing to be accepted as grown-up people. They are eager to prove their power, itching to put their knowledge to the test. Clear the way for them and stand back and let them carry their job through to the end, even if it makes your throat ache and your eyes smart to see them struggle. Deny yourself the pleasure of interfering with them, and let them grow their own souls. Give them a chance to be born again, this time a full-sized human being.

"THE MAN with a Face Like Mine Has to Be a Self-Made Man," says Clarence Budington Kelland next month. Kelland never received any bouquets or soft snaps because of his beauty. In his article he tells most amusingly how his "face value" has affected his career as an author.

HOW MUCH MONEY HAVE YOU LOST

through bad so-called "Investments"? Figure it up. Think how much income that sum would give you if you had it now properly invested, and also how much good you could—and, of course, would (if you had it)—do with it today.

Don't repeat these costly experiences, and don't go to the other extreme and hide your funds in a stocking. You can now get

A Liberal Income for Life

on your property—the older you are the more liberal the income—and at the same time recover at least some of your losses, by the difference between the usual interest rates and the rate on

"M. B. I. LIFE ANNUITIES"

And, of course, you have prime security. Twenty years without a loss.

Ask for details, and kindly add your exact date of birth so that we can quote you a rate.

"What *Can* I Give 'Em This Year?"

(*Continued from page 49*)

spend much on me this year,' begged a husband whose wife had lured him into our shop to look at a high-priced smoking set she was thinking of getting for him. 'Well, what do you want?' demanded his wife unhappily. 'Handkerchiefs and bedroom slippers,' returned her husband blithely. 'They always come in handy, and I can afford to pay for 'em!'

"Of course," Mr. Ovington went on, "if a man has a hobby, or any special interest, it is easy enough to decide on a gift for him. I have a friend who collects elephants of all sorts and sizes. Not flesh-and-blood ones, of course, but ebony ones, glass ones, ivory ones, and carved wood ones. He even wears a tiny carved ivory elephant on his watch chain. He is delighted with any present that has an elephant motif.

"As a rule, men show about as much imagination as women when it comes to selecting presents, but I believe that the palm for lack of imagination goes to a man I heard about the other day. His wife told me that on their first Christmas together her husband presented her with a very lovely vase, over which she went into ecstasies. The next Christmas, he gave her another vase, and again she expressed great pleasure in his gift. They have been married twenty years, and he is still giving her vases for Christmas. She says there isn't another spot in the house where one can go. But she added that rather than hurt her husband's feelings by suggesting she would like a change, she will throw out her piano and build a set of shelves to hold them all.

"It's quite the thing nowadays to give children presents in a series. One of my women customers remembers the birthday of each of her five little nieces with a sterling silver teaspoon. She began when the little girls were six. By the time they are eighteen years old, each of the youngsters will have a dozen handsome spoons.

"I know a man who is building a library for his son in somewhat the same way. The boy likes to read. On each birthday, he is allowed to choose a set of books for his own private section of shelves in the library. Long before he is grown up, that lad will be fast friends with more famous characters in literature than most folks manage to scrape an acquaintance with.

"WHEN you give a person a book for a present," warned Mr. Ovington, "you ought to be pretty certain about his taste in reading. A man who would be wildly enthusiastic over a rattling good detective yarn might be left entirely cold over the gift of a book of poetry. It is also an excellent idea to make sure that your friend doesn't already possess the book you contemplate giving him.

"I advise anybody who finds himself growing pessimistic about the human race to get a job clerking in a gift shop for a few weeks," declared Mr. Ovington. "He couldn't help seeing a fine, unselfish side of life that would be a revelation to him. A girl who makes perhaps eighteen dollars a week, and who has to spend fifteen of that on actual living expenses, will go into a store and pay five or six dollars for a dazzling string of beads for her pal, when she herself hasn't a strand in the world that cost more than ninety-eight cents.

"Last year, I heard of a homesick young clerk in a big New York bank who gave up his precious vacation in order to buy his sweetheart at home a wrist watch. For twelve months he had been counting on two weeks among the hills of his native east Tennessee; but when he found out that his girl had set her heart on a watch for a birthday present, he didn't hesitate two seconds. He wrote her that they were so busy at the bank that he couldn't be spared even for a few days.

"But perhaps mothers are the most generous givers of all. They give so much that never meets the eye or the ear. Not long ago, an elderly woman came into our shop and tried to sell her wedding ring. She said that she wanted to give her young daughter a pretty graduation dress. 'We don't buy such things,' the salesman informed her gently. 'I'm sorry,' she sighed; 'It hurts so much when we are young not to look as nice as our friends. When we are older, we don't care. We have learned then how little such trifles matter. But I don't want my little girl to have to start learning that yet. She's so young—and so sweet and pretty!'

"PEOPLE of moderate circumstances," continued Mr. Ovington, "often buy more extravagant presents than many who are very rich. The wealthy may give extravagant presents to others of equal means; but their gifts to friends in less affluent circumstances than themselves are frequently surprisingly modest. Somebody has suggested that people who have inherited great wealth are often stingy because they have never tested their earning capacity and, hence, have no confidence in their ability to make more money if they should lose what somebody else made for them.

"I distinctly remember one wealthy but tight-fisted middle-aged couple who on one occasion gave a good deal more than they intended to give for a present. They came into my shop looking for a wedding gift for a young woman who, I gathered, was a sort of 'poor relation.'

"After much poking about and comparing of prices, they finally settled on a very large, very ornate vase. Originally priced at one hundred and fifty dollars, it had been marked down to twenty-five. This was partly because of a small nick in the mouth of the vase, and partly because it was the kind of thing that would look well only in a big hall or drawing-room and, hence, was not much in demand.

"About two weeks after the vase was sold, a young lady came into the store lugging it in her arms. Explaining that she lived in a tiny Brooklyn flat where such a big piece would actually be in the way, she said that she wanted to exchange it for a set of dishes.

"I soon understood that her rich relatives had let her think that they had paid the original price for the vase. 'You know,' she said, 'this beautiful thing made me so

Digitized by Google
Original from
STATE UNIVERSITY SYSTEM OF FLORIDA

shamed of myself. All my life Cousin Annie has given me nothing but her cast-off clothes, when she could so easily have done something better. I've always felt downright hard toward her. And here she comes along and gives me this hundred-and-fifty-dollar vase for a wedding present! I'd love to keep it. Just to look at it makes me feel gorgeously rich. But, of course,' she added wistfully, 'it would be out of place in my little apartment. Besides, we haven't any dishes, or any money to buy them with.'

"I just sat down and wrote that girl's rich kinfolks that, through an error on our part, their young cousin had been given the original price on the vase, which she wanted to exchange for a set of china. I intimated that I could not act without their advice. I was surprised out of a year's growth when I got their reply. They told me to allow their kinswoman to select any set of dishes she wanted and to send them the bill.

"Maybe it was unfair of me, but I had a sneaking suspicion that they had already received a radiant letter of thanks from the girl which made them ashamed of their niggardly attitude toward her.

"I HAVE a bachelor customer who specializes in what he facetiously calls immoral gifts," continued Mr. Ovington; "that is, he gives his friends (and sometimes strangers!) things for which they yearn, but which they feel they have no moral right to buy for themselves.

"On one occasion, he gave an aunt of sixty-five—the mother of three grown sons and the grandmother of a débutante—a gold vanity case. She was wild about it. 'I never used powder or rouge in my life,' she declared, 'and I certainly don't expect to begin now. But ever since they first came out I've wanted a little case like this. I'm sick and tired of foot-warmers and smelling salts and such-like proper presents for old ladies. I *needed* something young and foolish!"

"It's pathetic, but often people go through life craving some simple luxury which they feel they cannot afford to give themselves. The wife of a bookkeeper here in the city told me the other day that for years her husband had hankered for a wardrobe trunk.

"'Whenever we were walking in the shopping district,' she said, 'I found it almost impossible to get him past the stores where luggage was displayed in the windows. There he would stand, with his nose glued to the plate glass, gazing wistfully at the trunks. I asked him over and over why on earth he didn't get one if he wanted it so much; but he always said that he didn't feel that he could spare the money. I've made up my mind to go down-town and get him one for his birthday. But heaven only knows what he wants with it,' she added, 'for he hasn't been farther away from New York City than five miles in ten years!'

"I've figured out that to this bookkeeper, chained to his high stool and to his ledgers, a wardrobe trunk stands for travel in far places, for romance, and for all the beautiful, glamorous things which perhaps he is never to know save in his dreams.

"It's just as well," reminded Mr. Ovington, "to bear in mind that women, especially mothers and busy housewives,

What every boy thinks about before Christmas

Look for this trade-mark on the sled you buy

. . . speeding down the snowy hillside on a brand new Flexible Flyer . . . steering 'round the "slow pokes", neat as you please . . . reaching bottom first and coasting 'way beyond all the others, for a record. . . .

What a thrill for any boy or girl just to contemplate. And, how huge a thrill to realize on Christmas morning!

Do not let *your* boy or girl miss all this healthful, outdoor fun. Give a Flexible Flyer for Christmas—the only sled every boy and girl knows by name. The sled they want—the strongest, safest, speediest sled made. At all good stores.

Make Your Kitchen A Joy Spot

Ventilate it with an ILGAIR Electric Ventilator

NOTHING you ever dreamed of will add so much to the pleasures of housekeeping as an ILGAIR Electric Ventilator installed in your kitchen for removing excessive heat, objectionable cooking odors and greasy fumes. The change it makes in the atmosphere is delightful.

Just imagine the joy of working in a kitchen where the air is pure, fresh and invigorating in any kind of weather — summer or winter — where all cooking odors and fumes are exhausted before they have a chance to trail through the house.

And most important of all is the fact that this compact, quiet-running ILGAIR Electric Ventilator can be easily and economically installed in your kitchen window, transom or wall opening of your home or apartment. The cost of operation is only a few cents a day. See your electrical goods dealer for a demonstration or send for 48 page illustrated booklet.

like gifts of a personal nature. A bride with her brand-new house to furnish may eagerly welcome a pair of linen sheets as a birthday or Christmas present; but to the woman to whom domesticity is no longer a novelty, silk stockings, or a smart new handbag, will make a much greater appeal.

"I have said that, as a rule, men don't like the unexpected in a gift, but, on the other hand, women love surprises. The husband who occasionally comes home with some pretty trifle in his pocket for his wife will be rewarded with vastly more appreciation than greets him when he deposits the conventional Christmas present in her lap.

"But above all things, a married woman wants her wedding anniversary remembered. The memory of this day is her secret shrine of romance. When her husband remembers too, he helps to keep alive something very precious in her heart. I have known married people who were seriously estranged from each other to be brought together again by some mutual gesture of 'remembering' on their anniversary.

"June and October are busy months for gift shops all over the country," said Mr. Ovington. "For some reason, these are the favorite months for weddings. For weeks before the great day, the bride-to-be is treated to innumerable showers, and, to supply presents for these parties, the local gift shop is stripped of every inexpensive article it contains.

"In small towns, where the bulk of the wedding presents are likely to come from one shop, the bride nearly always contrives to pay a visit to the gift shop and to supply the owner with a very clear and comprehensive idea as to her likes and dislikes, not to mention her most pressing needs. He, in turn, obligingly passes on this 'confidential' information to the whole community.

"Almost everywhere the bride is allowed to exchange presents that she gets in duplicate. In some instances, it would be very distressing if she did not have this privilege. All brides get a large assortment of compotes and bonbon dishes. A good many years ago, we sent eighteen bonbon dishes to a bride. Recently she told me that, ever since she was married, she has been giving them as wedding presents to others. 'Finally,' she said, 'I gave one back to the original donor, who did not recall it. Indeed she wrote me that she liked the bonbon dish I sent her better than any other she got, and she wound up by saying that it was *one* gift she was not going to exchange!'

"This incident goes to prove one of my pet theories, which is that folks have a tendency to choose for others things which they would like to have for themselves. Look at the fathers who spend anxious hours encouraging their sons to ask Old Santa Claus for an electric train!

"BUT to get back to wedding presents: It is on this subject that gift shop salesmen are likely to hear some mighty plain talk, and to learn just what it means to look a gift horse in the mouth. A bride is sometimes quite upset upon learning the cost of her presents. 'You don't mean to tell me that Helen gave only ten dollars for these near-silver candlesticks?' she will exclaim. 'Well, I hope she doesn't have to

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

spend her declining days in the poorhouse on account of extravagance.'

"But infrequently, however, a groom is more disgruntled than the bride if he feels that his friends haven't behaved as handsomely by him as he thinks they should. 'I've given my last wedding present,' one of them confided to a clerk in my shop some weeks after his wedding. 'I suppose I've helped furnish the houses of a hundred newly married couples in my day. And how many of them came across when I stepped off? About six, I should say.

"Oh, yes, folks ask the prices of presents they have received. One young woman was quite businesslike about it. She came in a few weeks ago with a list of gifts from her unmarried friends which had come from our store. 'Many of these girls will be getting married pretty soon,' she explained; 'and when I buy them a present I want to be sure that they get value received.'

"BUT plain talk about wedding gifts is by no means confined to brides and grooms. Often it is the harassed customer who unburdens his soul on this subject.

"'For the lord's sake,' he will beseech the gift shop salesman, 'have a heart and bring out something for five dollars that will get by. I've bought six wedding presents in the past two months and the old bank roll is not what it used to be!'

"In the average small city or town, the gift shop merchant is 'on' to all the local romances. Indeed, he has the inside story on more than one budding love affair.

"For example, Miss Maria Jones may take most seriously the attentions of the stout widower who has been escorting her to church and prayer meeting for a year; but the gift-shop manager knows that last Christmas four beautiful beaded bags, at exactly the same price as her own, went to four different post-office addresses. Worse still, each bag was accompanied by precisely the same poetic sentiments as those which so thrilled her. As for the gift-shop merchant, *he* wouldn't trust the pious widower as far as he could throw a yearling elephant!

"Time was," finished Mr. Ovington, "when the only gifts that a man could safely make to a woman were flowers, books, and candy. Nowadays, he can give a girl in whom he is interested almost anything that he would give his sister. This seems to me all right. It is a part of the new frankness that exists between men and women. I'm old enough to be old-fashioned, but I confess that I like the new way. And not just because I sell gifts, either!"

THE STORY of Edward Eugene Loomis, president of the Lehigh Valley Railroad, coming next month, is the story of a white-collar man who, in a day when getting ahead on the railroad almost always meant beginning in the operating field, worked his way up to his president position from a clerical job. "A clerkship is not a dead place when a live man is in it" is his proven opinion, and his philosophy of life is epitomized in, "A man cannot be a first-class leader unless he rubs people the right way."

Your hair responds

to the very first treatment

Vigorous, tingling with life — clear down to the roots! That's the feel of your hair after this treatment—the very *first time you use it:*

EVERY MORNING wet your hair and scalp thoroughly with Pinaud's Eau de Quinine. Then with your fingers pressed down firmly, move the scalp vigorously in every direction, working the tonic into every inch of the scalp. Move the scalp, not the fingers! Brush the hair while still moist. It will lie smoothly just the way you want it.

Used every morning, Pinaud's makes your hair *look* live, vigorous, too. Because it ends those two reasons for thinning, dry, dead-looking hair: dandruff—poor scalp circulation.

Buy Pinaud's Eau de Quinine *today* at drug or department stores. The signature of Ed. Pinaud is on each bottle. Pinaud, Paris, New York.

PINAUD'S

Eau de Quinine

The Most Foolish Investment I Ever Made or Heard Of

FIRST PRIZE

Two Oily-Tongued Young Men Play an Old Trick

HERE is the most recent, most foolish investment of the many that are being continually revealed to me. It concerns two stenographers who, together, had saved $2,400.

One evening they met a young man, presentable, polite, and companionable. He said his name was Harris and that his business was selling leases to oil lands in New Mexico in a district which I shall call Monotony Hills. The young women evinced lively interest, but demurred when offered an opportunity to acquire wealth.

Laughingly, Harris gave them his business card and told them when they felt like making a fortune to call upon him.

A few days later, the young women met another man, named Howard. He was registered at a well-known hotel, and he told them he was on a secret mission to buy oil-land leases in New Mexico for a big oil company.

Ah! New Mexico! Did he ever hear of Monotony Hills.

"Now, where did you hear that name?" Howard asked, in apparent surprise. "There's one piece of that hill left. I've tried to locate the lease holder—traced him to Los Angeles, but lost him. I'd give five thousand dollars for that lease."

The women were shrewd. Would they tell him about Harris? They would not. They hurried to Harris's office early the following day. How much did he want for the lease? Well, to them, $2,400.

The women gave their checks. They obtained the lease and hurried to Howard's hotel.

"Not registered," said the clerk.

They returned to Harris's office. He had departed—for good. They telephoned the bank. Yes, the checks were cashed.

From my office they went to the district attorney, and the search still is on for the two swindlers.

Did the women make a foolish investment? With a corporation department, better business bureau, banks, and their own employers ready and willing to advise them, it would seem so. H. C. S.

SECOND PRIZE

A Hat, a Dress, and a Pair of Shoes Cost Me $4,800

DURING the years 1919 and 1920, health insurance was almost a fad among a bunch of my friends. Like a good sheep in the flock, I, too, took a policy.

I faithfully paid my premiums until 1923. At that time I was a little short of money. There was a hat, a dress, and a pair of shoes that I wanted. "Oh, well," I reasoned to myself, "none of my family has ever had a physical breakdown. I think I will just buy these things now, and a little later I will redeem my policy."

So I bought them. But, alas! Before another pay day came 'round, I had an acute attack of tonsillitis. That quieted down, but a further examination led to the discovery that I had active tuberculosis!

Fifty-one months have passed since that examination. For over two years of that time I was in bed. Not one day have I been able to work. That hat, dress, and pair of shoes cost exactly $45. The premium on my policy was $45. Had I paid my insurance premium, for forty-eight months I would have received $100 each month, or $4,800.

To add insult to injury, while lying in bed I got too fat for the dress. And the hat was so out of date that I had to throw it away when I got up. Only the shoes were left. Ten dollars for a pair of shoes! That is all I realized on the investment. Yet, that $45, invested in insurance, would have brought me nearly five thousand dollars. E. R. M.

THIRD PRIZE

Just Try Giving Me a Free Lot Now!

ONE day last year a woman came to my door and asked me to write my name and address on a card, saying: "We are giving away a lot. You may be the lucky person."

I thought no more of it until, some months later, a man presented the card I had signed and informed me that I was entitled to a free lot.

I was afraid there was a screw loose somewhere, so I said, "Isn't there something else to it?" "No," he replied, "you only pay $40 to cover cost of the abstract and deed, and you get a clear title."

Against my better judgment I allowed myself to be persuaded into signing. Later, when I read the printed sheet on which the man wrote a receipt for the five-dollar deposit he required, I noticed that the free lot was only 25 feet front by 150 feet back. I said, "Why, that's only half a lot." The man said, "Yes; but you have the privilege of buying the other half."

A few days later, I went to the real estate agent to ask for my five dollars back.

I didn't get it. He drove me up to the most desirable part of the addition, and persuaded me to exchange my free lot for half of one of the more desirable lots. I was to buy the other half at a figure which I later realized would have been a good price for the entire lot. The whole addition was miles and miles from the city, with no access to electricity, gas, or water.

And I, a poor widow, was induced to buy a lot on the monthly payment plan. I paid down the $49, which I had to borrow!

The next day, when I came to my senses, I knew that I was the biggest dumb-bell on earth. MRS. G. W. H.

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

The Old Doctor

(*Continued from page 51*)

is wife had hard work getting him to e off his clothes at night in the winter ne. He got so he just wouldn't take m all off, or, if he did, he'd put on just many as he took off, before he'd go to l. 'No use bein' cold,' he said. 'People ght to wear plenty of warm clothes in winter, and take fewer baths, too. is thing of takin' a bath every day is all lerol!'"

He told me once about goin' to bed cold night with three sets of under- ar on, besides his felt boots and his fur . 'I was all right then,' he said, 'except hands. They were cold. So I put on gloves, and then I slept very com- ably all night.' When folks would gh at him for wearin' so many togs, I say, 'Let's see, how many times have been to me for grip capsules since nksgiving? *I* haven't had a cold all ter.'"

That's so. He never was sick much. d to get 'all in' sometimes from stayin' ight after night, with no rest between, n there was lots of sickness around, durin' the flu epidemic."

I remember one night during that ible siege," said the minister, "that I t for the Doctor to go with me to a nan who was dying. It was almost two ock in the morning, and I found Doctor ger sitting in his office chair fast asleep, n a medical journal in his hand. Sev- other current numbers of medical gazines were on his desk. He awoke as epped into the office and said, with an logetic smile, 'I guess I was too tired to much out of this journal to-night. I to read something every day about flu. Folks don't know any too much ut it, anyway, and I want to know all n when there are so many lives in my ds.'"

"YES," said the druggist, "the Old Doctor was mighty conscientious, he wasn't afraid to tell other folks what y ought to do, either, when he thought y needed telling. Remember the young e specialist who came up from Balti- re to operate on the crippled mountain ? . . . Doctor Unger wrote him about case, telling him the boy's parents e poor mountain folks, and asked him come up and see what he could do for child. The young doctor replied that d come if he was guaranteed a hundred fifty dollars and expenses. The Old ctor wrote back that he wouldn't rantee him a cent—not even his rail- y fare—but said he'd expect him to ne. At the same time he wrote a big tor in Baltimore about the whole ng."

Did the young feller come?"

Oh, yes, he came, performed the opera- n—and paid his own expenses! They ught the boy in to Doctor Unger's se, and the whole family came along l stayed to dinner and supper. When y got ready to go home that night, the her said to Mrs. Unger, 'D'ye like 'kin? If ye do, I'll bring y' in one e day.'"

When the laugh subsided, the hardware man said, "Lots of folks imposed on the Old Doctor, callin' him when they didn't need him, and never payin' him a cent, nor ever intendin' to."

"Yes, like the woman that had to be 'blet'."

"Who was that?"

"That old woman who lived down in the Corner. She was terribly ignorant, and fat. Every so often she'd decide she was goin' to have a 'stroke,' unless she was 'blet,' as she called it. So she'd send one of the children over for the Doctor, and the kid would camp on the doorstep or in the yard until the Doctor would go along. The only way to get rid of the kid was to go and bleed the old woman. I remember one hot August day, after the Doctor had been up on a baby case all night and was trying to get a little sleep, the kid appeared and demanded that her mother be 'blet.' I met the Old Doc on his way back from the Corner.

"'She's right smart of a fool,' he said, and then added, 'Well, it's a good thing I'm a Christian as well as a doctor. I set out to make up some lost sleep this hot afternoon. If I wasn't a Christian, I'd have bled that woman to death!'"

JUST then, a gentle-faced old lady, frail and bent, came into the drug store.

"Harry," she said, as the druggist went up to her, "I'm worried about that last prescription Doctor Unger gave me. I can't find the bottle, and now he's gone, and I can't get another. I thought maybe you might know what it was."

"I think I can find it, Miss Sally. Wait a minute, and I'll look it up for you."

As the minister turned to speak to her, Miss Sally said, "That was a good sermon you preached to-day, and he deserved all you said."

"More than I could say, Miss Sally."

"Yes, that's true. Words can't tell it all. I liked what you said about his bein' like the man in the poem who 'lived by the side of the road and was a friend to Man.' I guess you hadn't come here yet—the time he saved my sister Jane's life.

"It was a long time ago, but to me it's just like it was yesterday. Jane hadn't been well for a good many years, but she wouldn't have an operation. More than once Doctor Unger said to me, 'If Jane's ever took real bad, Sally, send for me quick.' It was durin' that first epidemic of the grip in the early nineties that Jane was took awful bad, and the worst of it was Doctor Unger was in bed with the grip, himself, so we had to call another doctor—two of them, in fact, for the first one didn't seem to know what to do. Neither did the other one, for that matter, and Jane kept gettin' worse.

"Of course Doctor Unger heard about it, and his wife told me afterward that he called for his medical books to be brought to his bed, and then he set up most of the night readin' up the case. In the mornin' he got up and dressed and came down to our house. He said he had telegraphed to the city for ether and it would come on the noon train. After the ether came, we laid Jane on the linin'-room table and Doctor

After 3 hours in town

is your house CHILLY *because* "the fire had to be banked"?

Have more comfort —for ⅓ less fuel

ORDINARILY, you dare not keep drafts on when you leave for an afternoon or evening "in town." The fire may burn itself out before you get back. So you bank the fire and turn off the drafts. In half an hour the radiators grow cold. When you get home the house is chilly. It takes an hour to get up steam.

A clever invention ends this. Merely by replacing the air-venting valve on each of your radiators with a Hoffman No. 2 Vacuum Valve you have hot radiators 3 hours (not 30 minutes) after banking. You get up steam in 15 minutes (not an hour)—and save ⅓ your fuel.

By this saving, you earn 50% to 65% on your Hoffman No. 2 Vacuum Valves—*the first year.* At the end of the second, you have your investment back—plus a profit. Every year after this, you save $5.00 on each radiator.

Send for book—Like any investment, this one is worth studying. For complete details (explaining the clever invention that makes this amazing comfort and fuel saving possible) send for interesting illustrated book "*How to Lock Out AIR—the heat thief.*" Just print your name and address on the edge of this ad and mail to Hoffman Specialty Co., Inc., Dept. P-11, 25 West 45th St., New York.

Unger and the other two went to work, they doin' what he told them to.

"About a week afterward, when Jane was gettin' along fine, he said to me one day, 'Sally, I can't help thinkin' how queer it is . . . her comin' through. Every one of my medical books say it's no use to operate after a patient is as far gone as she was. Yes . . . it's queer. The fellows that write those books are smart men . . . but even they can't . . . always . . . be sure. Anyway, we fooled 'em this time!'"

"That's another of the cases Doctor Cullum told me about," said the druggist, who had joined them after a successful hunt for Miss Sally's precious prescription.

"MY SISTER Jane lived fifteen years after that operation, thanks to the best friend she and I ever had!" Miss Sally continued. "I'm glad if Doctor Unger got the credit for it that he deserved. There's so much he's done that nobody knows about—except the ones he done it for. . . . I'm relieved you found that prescription, Harry. If you'll put it up for me, I'll stop by to-morrow when I come to the post office, and get it. . . . The mail's most distributed, so I'll go on home, now."

As he rejoined the other men, the druggist said, "I'd forgotten about the Old Doctor having the grip during the first siege. He used to get all worn out, but he wasn't often laid up sick."

"That's jest what I was sayin' before Miss Sally come in," continued Jim. "Why, even this last year, when he couldn't go out much, and the last few months, when he was in bed most of the time, he said, himself, there was nothin' the matter with him. 'Jim,' says he to me one day, when I was jollyin' him for bein' so lazy, 'you're right,' he says, 'there's nothin' the matter with me. I've got a good appetite and not an ache or a pain. I'm just . . . weak,' says he."

"That's it," said one, "worn out takin' care of the rest of us, with never a thought for himself. Why, even after he was too weak to leave his room, folks wouldn't give him up, but insisted on goin' to his bedside for prescriptions and advice. And he give it to them! Nothin' weak about his mind!"

"Except the last month or so, when he got spells of thinkin' he wasn't at home," said the druggist. "That was mighty hard on his folks. He'd beg them to take him home, and wouldn't believe them when they told him he *was* at home. Did hear about Jim Brubaker's goin' there day for his wife's stomach medicine? Unger was tellin' my wife about it. come to the house one day with a bot and says to her, 'Mary's awful bad ag and there's nothin' but that stom medicine of the Doctor's will do her good.'

"'Oh, Jim,' says Mrs. Unger, 'I d know—I'm afraid Doctor can't tell where it is. He's havin' one of his spells of thinkin' he's not at home.'

"When she went to the Old Doct bedside, she jest said, 'Doctor, Jim B baker's here for his wife's stomach m cine. Do you remember where it is?'

"'Yes,' says the Old Doctor, jest calm and rational, 'it's in a big bottle the second shelf of the small cabinet, it's marked "Stomach Medicine for M Brubaker." I sent for it on purpose her.'

"'How much shall I give him?'

"'Did he bring his bottle?'

"'Yes.'

"'Fill it for him.'

"'What shall I charge him?'

"'Fifty cents. And you tell Jim B baker I want to go home. I know h take me.'

"AND, sure enough, she found the bot just where he told her it was and J said that was what he had always p for it. He actually cried when M Unger told him what the Old Doctor h said about Jim's takin' him home."

"Poor Old Doctor! He didn't have wait long after that to be taken Home

"Did you hear what he told his wife put on his tombstone?"

"No. What was it?" It was curiosity that prompted the question.

"He said, 'I want just a simple sto Put on it:

He Practiced Medicine in Franklin County Fifty-four Years'"

"He practiced more than medicin said the minister.

A sudden pouring forth of men, wom and children from the post office, m door, betokened the distribution of evening mail.

As the group about the druggist br up, one said, "There are none left lik Old Doctor!"

"No," said the druggist, "the Old D tor—and his kind—have passed."

How to Make People Hate You!

(*Continued from page 15*)

goes to about two hundred newspapers throughout the country, and is one of the most popular things of its kind. It used to give me a perverse pleasure to make light of this work of his, principally, I suppose, because I knew he was proud of it. I do not know how many times I have said to him:

"Dave, do they pay you money for that stuff? Or is it glory you're doing it for?"

And there was something in my tone which implied that, of course, no man could hope to add to his reputation that way.

At first, Dave used to grin at my witticisms. After a while, however, did his utmost to keep me off the subje and if I persisted he would agree w me that his feature was not much anything, and he would promptly sw the conversation to something else. he bided his time all the while, and day his opportunity came.

A rival syndicate approached him w an offer. Dave declined it, and rec mended that the firm try me. They and when I learned how very profita the work was I said I would consider

The syndicate, as is customary, as for half a dozen try-out pieces. I promi

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

them cheerfully for the day after next. Why, it was the lightest, thinnest kind of stuff, a piece ran only to five hundred words; and, as I had often told Dave, anybody could do a ream of it a minute with his eyes closed.

Well, I toiled over those six samples for a solid month. When I finally delivered them, the syndicate was very pleasant and courteous about my efforts. They suggested that I continue giving my attention to the fine, thoughtful work I had always done.

I took their veiled meaning to heart, and their advice too. My ironical comments on Dave O'Ramey's feature abruptly ceased. I feel that I have been a more agreeable and less bumptious companion to my other friends since then, and I hope that they are giving Dave due credit for my improvement.

A THIRD recipe for unpopularity which I used to practice frequently is close kin to the one I have just described. The formula was, "I don't like your friend." It could be stretched to include sundry unsolicited and uncomplimentary comments on people's families, relatives, and friends.

I recall narrowly escaping an almighty trouncing at the hands of an enraged mob of students at college. It was in my freshman year. Our team had just won a hard-fought football battle, for the first time in several years, over a neighboring institution. The hero, who had made the decisive touchdown, was a fellow named Boyd. The moment the game was finished, a throng of enthusiasts rushed the gridiron, seized Boyd, and, raising him aloft on their shoulders, marched with him through the town.

As they went along, hundreds of others, armed with cow-bells, rattles, and election horns, poured out of the dormitories and the rooming-houses and joined what had become a monster parade. I was out in front of the dining-hall with a group of fellow-boarders when the procession passed, and when I saw who the hero was, I was both surprised and amused. I knew Boyd rather well. I said something about "dubs with haloes." My words were quickly caught up and carried out into the packed mass in the street. The next minute there was a furious rush upon the hall. What saved me from a violent end was Boyd's insistence that the celebration should not be marred by any rough-housing.

If I have by now rid myself of this unlovely habit of making tactless remarks, I owe the good work largely to a friend whom I shall call Hubert Lewis.

Hubert managed to do for me in this field what Dave O'Ramey did in that other.

Hubert often spoke with enthusiasm of his novelist friend, Sedgwick, and urged me to read his work. I did, and thought highly of it. After that, I asked Hubert to arrange to have me meet Sedgwick. Somehow, the opportunity did not present itself for a long while. Several appointments were made; but each time one or another of us had to leave town.

Finally, one evening it happened without prearrangement. I had come into the city to see a play, and discovered at the door of the theatre that my tickets were for another night. I think that was the

way of it. In any event, I called up Hubert and asked whether I might come up. He said he would be glad to have me; he had a few other people in.

I should add here that Sedgwick is not actually what the novelist called himself. His real name is one of those strange English ones that look like Charlie when they are written and sound like Edward when you hear them. That was what tripped me up.

I found several mutual friends and one man I did not know. I was introduced to the stranger, but did not catch his name. I did not try particularly; I did not fancy him from the start. And I was rather put out to see that Hubert was making so much of him.

He left early, and that gave me my opportunity. I mimicked his way of shaking hands with the tips of his soft fingers, his accent, his affected manners. I stuck a handkerchief into my sleeve and pulled it out with his peculiar flourish.

"Who in blazes is he, anyway?" I finally inquired in a tone of surprise at Hubert's associating with such queer fish.

"Why," replied Hubert, "that's Sedgwick—Ned Sedgwick," and he spelled the name out for me—"the English novelist you've been wanting to meet, you know."

A FOURTH way to get yourself disliked is to offer information on all sorts of topics, and in a tone of authority, to a mixed circle trying to have a good time.

Several years ago, when a certain Spanish novelist became the vogue in this country, I happened to be spending a week-end at the home of some friends in the country. We were sitting around on the lawn on the Sunday afternoon when the conversation drifted to the Spanish author's latest book. I do not recall who brought up the topic, but one middle-aged gentleman was giving what seemed to me a badly garbled account of the plot. To make matters worse, he kept mispronouncing the writer's name.

I corrected him, and added, "I have read the book in the original. I speak Spanish almost like a native, you know."

He said, "Thank you," offhandedly, without looking up, and went right on butchering the soft Spanish sound of the name. I quietly pronounced it straight each time it recurred in his recital. My efforts, however, seemed to go for naught. His accent got worse and worse. Presently he took to muddling up the names of the characters as well.

The little group on the lawn seemed to enjoy the performance hugely. One or two girls started tittering. Our host alone appeared unamused. He tried to catch my eye. His wife got up and walked away determinedly, and a couple of minutes later a servant hurried out and announced that tea was served in the arbor. . . . It just occurs to me that I haven't been in that house for a number of years.

A related but entirely distinct procedure for getting yourself disliked is usually introduced with the phrase: "Well, as I was telling you." It consists in doggedly pursuing your own favorite topic, regardless of the tastes and interests of the people you are with. My most memorable experience of this nature was in forcing a political discussion on a houseful of musicians.

Along about the middle of the winter of 1923 I gave an address on the post-war situation before an association in New York. I had just returned from a three-year stay in Europe, and had had a book published on what I had seen.

After the meeting, a friend brought up to the platform an elderly lady and her daughter. They said the usual pleasant things about my talk, and added that they hoped they might see me at their home. A short while later, I received an invitation from them to dinner.

I went, expecting to meet a group of foreign-affairs fans. I found, instead, a gathering of singers, violinists, orchestra conductors, a composer or two, one music and one art critic. My hostess, it appeared, was a patroness of the arts. It did not look as if I were going to be the center of attraction. I was in for a dull evening; but I determined not to be shoved into the background by an avalanche of music talk. When a young tenor with a marked German accent said something about Wagner, I felt the moment had come for me to take things in hand.

"Speaking of Wagner," I cut in, "on my way to the occupied zone, I stopped in Bayreuth, the city which he put on the map. You can't imagine the situation in the Rhineland. It will take Germany forty years—"

From then on, I held the floor against all comers. Only once did I seem in danger of being dislodged. In the confusion of withdrawing to the living-room, an Italian conductor made an attempt to switch the talk back to where it had been before my arrival, by an allusion to the opera at Milan.

"Milan!" I exclaimed quickly. "I was there when the Black Shirts started their March on Rome."

And I followed up this lead with a brief history of the Fascist movement, its marvelous organization, and its prospects for the future. After that, the musical people gave up. Some tried to be polite and listen to my monologue. Others drifted off to the far corners of the room, where they carried on in whispers.

As my hostess took leave of me, she said: "You have given us a most informing evening. I am sure we have all profited by it. I hope that the next time you come I can persuade our friends to give us some music."

That "next time" has still to come.

A SIMILAR but, if possible, more riling characteristic was a talent I used to have for wanting to show people how much better I could do things than they did them.

"That's pretty good," I would begin, and immediately add, "but let *me* show you!"

I think the trouble began when I was a boy in school. Being a studious youngster, I had got one or two of my teachers into the habit of looking to me for the answer when other pupils failed. After canvassing the class, the teacher would finally point an expectant finger at me and say:

"Now, you tell them."

I hope I shall meet those teachers some day and tell them what a pest their well-meant flattery made of me.

I recall other incidents of a like nature without number. They include everything, from showing a companion on a

canoe trip how to land the craft gracefully, to demonstrating my method of inculcating obedience in my children, for the benefit of a man and his wife who complained that their youngsters were a trial when bedtime came.

But the incident that I remember most vividly is one that occurred about two years ago in a city in the Middle West. On my way there, I had got acquainted with a gentleman who shared the sleeper section with me. We arrived about dinner time and went together to a German restaurant he said he knew to be good. My companion at once began addressing the waiter in German. Now, I have a fair book knowledge of the language, and to my ear his accent sounded very wobbly. So I thought I would help him out.

"The gentleman means," I started to interpret, when the waiter politely interrupted me.

"Yes, sir; thank you, sir," he said in English. "I understand the gentleman perfectly. He is talking the dialect of the section where I was born."

My traveling companion, it turned out, was a native German and a professor of the language in a university near by.

ANOTHER propensity of mine which has often got me into difficulty is the desire to analyze the causes of my friends' costly mistakes and reverses for them, just when they are struggling to forget them and recover their self-respect.

Quite recently, my cousin Walter, a real-estate operator, lost practically everything he had in a disastrous boom. At one blow, his family fell from affluence to virtual poverty. Walter is no longer a young man, and this sudden decline in his fortunes was a very pathetic thing. The worst of it was its effect on the man's morale. For two years he could not get back to work. He said it was no use till he had regained his self-confidence.

I was sincerely sorry for him, and was prepared to do whatever I could to cheer him up. But I felt that it was a mistake for him to try to forget, and I told him so.

"You'll be all right," I said reassuringly. "We all go wrong now and then. A man like you, who has been in the same line of business almost from boyhood, can come back all right. It's no use crying over spilled milk, of course; but unless you have the courage to look your mistakes straight in the eye, you run the risk of making the same ones again."

Thereupon, I proceeded to give him a post mortem of his failure. Also, I showed him just how I once pulled myself out of a similar mess. Walter seemed to be cheered and impressed by my advice. His wife, however, took another view of it. She canceled an engagement with us scheduled for a few days later, and confidentially told my wife that as long as her husband was in such a depressed condition it was not good for him to talk with me.

A seemingly harmless practice of mine used to consist in reminding people of promises they had made on impulse, and which I knew they were in no position to live up to.

I know an elderly poet, for instance, who when he is merry with good fellowship will impulsively invite the whole gang at a meeting to come and spend the week-end at his little suburban cottage.

Your Mistakes in English STAND OUT!

YOU can not hide your mistakes in English—they stand out sharply, giving others an unfortunate impression of you. You may not make such glaring errors as "He don't," "You was," "I ain't." But perhaps you may make other mistakes which offend the ears of cultured people, and cause them to judge you unfairly.

No one will correct *your* mistakes in English. People are too polite. They fear you will feel insulted, and unconsciously you keep on making the same mistakes. And, though you may think your English is good, it may be dotted with errors which *others* notice, and which destroy many of your opportunities for advancement.

What Can You Do?

For many years Sherwin Cody studied the problem of creating *the habit* of using good English. After countless experiments, he finally invented a simple method by which you can acquire a better command of the English language in only 15 minutes a day.

Under old methods rules are memorized, but correct habits are not formed. Soon the rules themselves are forgotten. The new Sherwin Cody method provides, on the contrary, *for the formation of correct habits* by constantly calling attention only to the *mistakes you make*—and then showing you the right way so that correct English soon becomes "second nature." Already over 50,000 people have used this method with the most marked results.

FREE Book on English

A new book explaining Mr. Cody's invention is ready. If you are ever embarrassed by mistakes in grammar, spelling, punctuation, pronunciation, or if your vocabulary is limited, this new free book, "How to Speak and Write Masterly English," will prove a revelation to you. Send the coupon or a letter or postal card for it now. SHERWIN CODY SCHOOL OF ENGLISH, 912 Searle Building, Rochester, N. Y.

He means it all right—at the moment. As soon as he gets home, however, and surveys the accommodations, he realizes how fantastic and embarrassing it would be if even half the regiment he has asked were to take him at his word. And then he and his wife sit at the window in an agony of apprehension lest someone should be literal-minded enough to come and eat up their Sunday dinner on Saturday night. As a rule, nothing happens, for everyone knows the old fellow's amiable weakness.

Once, a good many years ago, a young couple we were visiting in the country carelessly suggested that we might have their home for our summer vacation while they went out West to visit their folks. They were entirely in earnest about it. But they were not particularly prosperous that spring; moreover, they had in the meantime got an offer to rent their place for a sum which would more than pay their trip home.

No doubt they should have told us what they had done. But it was not an easy thing to do. They hoped, very likely, that we had forgotten the promise altogether. Maybe they even forgot it themselves. As a matter of fact, it made no difference anyhow, because we went to France that year. Well, when we met that fall, I put my arm around the young man's shoulders and said, "I thought you were going to give us a free vacation this summer, old top."

The pained embarrassment in that fellow's face, and especially in his wife's, is one of the things I shall never forget. It killed in me the desire ever to try to call anybody's "bluff" again.

THEN, too, I must not overlook my old habit of throwing a wet blanket on people's enthusiasms. The formula here was: "Oh, do you like *that?* Of course, I used to, when I was young and foolish." And the tone implied that no one but an illiterate yokel could be interested in "that," whatever it might be.

The odd part of it is that if there is one habit I profoundly abominate in others it is that very one. I remember a friend my wife used to have (let us call her Edna) who made a specialty of that formula in all its possible varieties. Edna could say, "Do you still read *Dickens?*" and make it sound like, "Do you still play with mud-pies and wear bibs?" I have seen her more than once make a roomful of educated people feel like a lot of dumb-bells by the merest lift of her eyebrows.

When we moved into a new house, which my wife had furnished with all the skill and love of home that was in her, Edna took it in with one sweeping glance, and cried, "Dear me, how quaint and unpretentious!"

When I think of Edna and my feelings about her, it is sometimes hard for me to believe that there was a time when I played her favorite game.

On the other hand, I have no trouble at all recalling any number of instances of making myself unpopular in another field. I mean the habit of picking on people's sentiments, and dismissing them as "Nothing but a lot of prejudice." Political partisanship, religion, and patriotism offered ample opportunity.

LET one of my mildest samples suffice: I happened to have gone to college in a Middle-Western state. The boy I roomed with in my first year was a Virginian, while I had come from the East. About the middle of the term a high-caste Hindu student came to our school from the Pacific Coast. He had the features of a white man and straight hair, but his skin was as black as pitch. Because of this, he experienced great difficulty in getting a place to live. Some of our teachers finally persuaded one landlady to take him in. But when her other roomers got home from classes they offered her the choice of turning out the Hindu or of losing them in a body. The incident caused much comment. I told my room-mate it was a shame and a pity to treat the poor fellow that way.

"Well," said he, "would you want to live in the same house with a nigger?"

"Nigger, my eye!" I replied hotly. "He is no more a negro than I am. He is an educated Hindu gentleman. His people were civilized when yours and mine were savages. You are just prejudiced."

My room-mate found other quarters that night. At the time, that seemed to me a proof of his inability to listen to reason. That there was something to be said against my way of preaching it, I failed to see. I know now that if he had been the most tolerant person in the world, my tactless method of arguing would have riled him into a defensive attitude.

When I think back over my past behavior, two things strike me as miracles: One is that I managed to come through alive. The other and the more remarkable is that I finally acquired enough sense to change my tactics.

The Most Annoying Person I Know

Prize Contest Announcement

YOU have just read the story of a man who succeeded in curing himself of a number of annoying habits. The big annoyances do not "get our goat" nearly so much as the petty little things that people do day after day, usually quite unconsciously. So go ahead and let off steam about the most annoying person you know, and tell us frankly and feelingly why and how he or she annoys you.

For the best letter of not more than four hundred words we offer the following prizes: $30, first prize; $20, second prize; $10, third prize. Competition closes December 20th. Winning letters will appear in the March, 1928, issue.

Address "Annoying Person," Contest Editor, THE AMERICAN MAGAZINE, 250 Park Avenue, New York City.

Contributions to this contest, and any enclosures, cannot be returned, so you must make a copy of them if you want to preserve them. Manuscripts and inquiries not connected with the contest must be sent under separate cover to the Editor of THE AMERICAN MAGAZINE.

CIGARETTE CASE

"Thou Shalt Not Kill—"

(*Continued from page 13*)

which we have no control; we cannot keep ourselves from being born, we cannot keep ourselves from dying. The short space between these two epochal dramas in a human life, or in any life, is the period given to us for our schooling. Death is the more glorious of the two adventures because it marks our graduation from the training-school to something higher—if we have carried on in a decent way. And I believe that this holds true for a bird or a dog, a flower or a tree, as surely as it does for a man.

Death was not meant to be unbeautiful. For living things to fight for themselves and against others was the first law of the foundation upon which the great Creative Force planned and built the universes. Progress, development of character and soul, vision, thought, everything that is significant in life come only through the vanquishment of obstacles placed before us. To survive, we must struggle; to grow, we must win. Shelter a flower too much, and it dies easily; pamper a child, shield him from the influences with which normal children have to contend, and he does not become a worthwhile man; let a man retire at the age of fifty, do nothing, fight for or against nothing except time, and he degenerates physically and mentally; let a nation surround itself with too much power and luxury, too much wealth, so that it no longer has to compete for healthful existence, and that nation declines in the pages of history.

NATURE, which is the visible manifestation of the Great Creative Force, never intended that anything should *just die*. Its intention was that everything should die straining to preserve life to the last. It meant everything should be killed, else in time progression would cease. A thing which did not have the inclination and courage to exert itself even when such effort seemed unnecessary was not living up to the mark set for it. So no single thing was given life, from the gnat and the vine and the beast to man, which did not have its annoyances and its enemies. This far-seeing Force made everything a pest and a menace to something else; it created an earth populated with combative forces; it allowed no pleasure which did not demand its price; it built life in a million different forms, each form having its own burdens to bear—which answers the question asked by so many children: "Why did God make mosquitoes?"

Proof of this intention is about us in nature. Nothing "just dies." Everything is killed. If this were not so, life would be everlasting, and the countless generations of unborn things destined to have their turn on earth would have no chance. The man who enters the apparently gentle and peaceful sleep of death at the age of ninety was *killed* as surely as the child crushed under the wheels of a train. He was killed by what we call old age, killed by the breaking down of the machinery that had kept him

"What's Andy Blair Doing Now?"

Bill—"Haven't you heard? He's the new sales-manager for Hess & Schoble and they say his salary is $7500 a year."

Tom—"He certainly has come up fast. He wasn't getting over $50 a week the last time I saw him. How'd he do it?"

Bill—"Took up a course with the I. C. S. and studied at night. That's why the old crowd hasn't seen so much of him in the last few years. I wish I'd had the sense to do it too. I'd be making more money right now if I had."

Why don't *you* study and get ready for promotion too? We'll be glad to help you if you will only make the start. And the way to do that is easy.

alive, killed by the forces which were planted in us when we were born. The grass root is killed. The tree is killed, if not by fire or ax then by wind or lightning, or, in old age, by rot at its heart. It is this endless struggle against death which makes plants and flowers strong, as it makes men and animals strong. The blade of grass fights as hard for its existence as man does for his success.

As long as a proper balance is preserved, this destruction of one form of life by another, this continuous progress because of continuous conflict, is just and right and, in my opinion, was so planned by the Force we call God.

But when this balance is destroyed, when one species becomes so aggressive and powerful that it is a menace to all other species, then the inhabitants of the earth face the most serious problem of their existence.

IN THE beginning it was not ordained that all forms of life should be of the same degree of intelligence. I believe that a million years from now, if the human race is permitted to exist that long, man's intelligence will be as superior to the intelligence of man to-day as ours is superior to that of the toad in its puddle. And during those years the toad will have climbed several rungs up the ladder. Yet, even then, we shall only be creeping out of the sloughs of ignorance, compared with the accumulative mental forces which have progressed ahead of us to a point where they can help in the running of the universes.

In so far as we can look back through the few years of our known past, man has fought and killed to attain his present position on the earth. He killed to feed and protect himself for so many ages that in time killing became the chief passion of his life. The running of red blood has given him his greatest thrill and pleasure. Wars and internecine strife were not sufficient to quench his thirst during his early history. The blood-lust called for the frequent sacrifice of girls and young men chosen from among the families of his friends and neighbors. When he "got religion" he wanted to kill off the people of other religions, and set out valiantly to do it. In the name of God he slaughtered his way through two thousand years. But he burned and massacred his way up through all obstacles; more merciless than the tiger, less charitable than the serpent, bent on extermination and outrage and the despoliation of all living creatures, except those of the tribe to which he belonged. Then came so-called civilization, the dollar, and to-day.

Civilized men, as we know ourselves and our neighbors, are held in leash by laws, without which they would revert into the conditions which involved humanity centuries ago. There are few of us who have voluntarily made laws for ourselves; *our neighbors* have usually made them for us. It has always been difficult for us to perceive the motes in our own eyes and quite fortunate that our neighbors have been able to see the defects which the majority of them have not discovered in themselves. Through this rather paradoxical process, we have climbed gradually toward better things; a finer quality has been given to our emotions, our sentiments have been sharpened, our instincts improved, we have come to understand a litt what charity and good will on earth intended to mean.

But the most difficult of man's st gles has been the one to alienate him from the lust to kill, which for so m thousands of years was the active vital factor in his efforts not only survive but to climb over other form life to the present status of his ascende Therefore, conceding his own weakn and confessing his inability to progr without the assistance of forces stron than his individual will, he began to m laws for his neighbors and his neigh began to make laws for him, with result that to-day he is a law-directed law-leashed animal, one half of him ob ing while the other half condemns, ne unanimous with himself—the savagery opposing restraint, the better side of h making that restraint possible.

From the time when he could not out and kill his enemies indiscriminate winning prestige and glory thereby, began to seek out outlets by which could relieve himself of his desires. was then that hunting, as we know hun ing, ceased to be a labor devoted to t quest for food and became a sport.

Not long ago, the so-called outdoo man could find no beauty in the field no thrill in the forests, no lure in adventu in the open, unless he could go into the places and slaughter some form of wil life. To kill had always been, and sti remained, his chief passion. If he ha shot his last shell and the gun on h shoulder was empty, the day ceased t hold its interest for him.

WE ARE just passing over the border land of this dark-age barbarism and are beginning the great work which w know as conservation—a work whic embodies, first of all, the psychologic association of man with the desire to kil and the campaign which must be con ducted to bring that desire to an end.

Within the next few years it is bound to be recognized as the most vital problem in our existence, for so overwhelming has man's power become, so easy is it for him to exterminate entire species and forms of life, and so terribly has he already upse nature's balance that, unless he halts immediately, ruin and desolation lie ahead of him.

Conservation is no longer a term associated only with the killer. Heretofore the conservation departments of the various states have exerted all their efforts, in the matter of wild life, that the killers might be given more to kill. This is largely the fact even now. I believe Michigan is among the first half-dozen most progressive states in conservation; yet when any form of wild life is discussed on our commission it is the killer who receives ninety-nine per cent of all consideration. What will the fishermen think of certain action? How will the hunters take it?

These are the questions always asked, and it is quite the usual thing to be guided accordingly. We do not say, "There are fifty men, women, and children who want to go out and *look* at living things to every one who wants to kill; therefore we will interest ourselves at least partly for this majority." Not only in Michigan but in

Scientific Facts About Diet

A CONDENSED book on diet entitled "Eating for Health and Efficiency" has been published for *free distribution* by the Health Extension Bureau of Battle Creek, Mich. Contains set of health rules, many of which may be easily followed right at home or while traveling. You will find in this book a wealth of information about food elements and their relation to physical welfare.

This book is for those who wish to keep physically fit and maintain normal weight. Not intended as a guide for chronic invalids as all such cases require the care of a competent physician. Name and address on card will bring it without cost or obligation.

HEALTH EXTENSION BUREAU
SUITE G-218 GOOD HEALTH BLDG.
BATTLE CREEK, MICHIGAN

other states have the conservation departments refused to take this attitude in relation to wild life.

Killing seems to be the requisite to healthful living, even when the species that are being hunted are close to extermination. Little effort is exerted to spread the gospel of a great truth—that to look at wild things and let them live, to watch them, to see them in their homes, to experience the miracle and thrill of making friends with them is infinitely more character-building, especially for youth, than to stand over a dying creature and witness the last faint throbbing of its heart, its final gasp of pain, the glazing of eyes that a few moments before were soft and bright with life.

I do not mean that I would put a stop to these outdoor sports of man—hunting and fishing. In opposing these inclinations of the human species I would be unwisely opposing the fundamental reason for the development of all species, for every living thing "hunts and fishes," from the stone that is slowly growing by absorbing other matter, from the grass root that becomes stronger by subduing the obstacles about it, from the vine that chokes the life out of a tree, from the invertebrate that builds its coral home, from the spider, the fly, the lowliest manifestation of life, up to man. Should these things cease to "hunt and fish"—should they cease in their efforts to destroy—then they would grow stunted in their progression.

MY CREED of the wild can be expressed in these words:

To "hunt and fish" is the first great law of nature. Everything "hunts and fishes," from man to the weakest of the creatures or things he destroys. It is ordained that the ashes of destruction shall give birth to life, and that in killing, if it is within the immutable bounds prescribed by nature, there is rejuvenation; but to adventure beyond these limitations, until killing becomes a lust, is to invite destruction of the balance of those laws of nature which make existence possible.

I believe that many generations, if not centuries, will pass before man arrives at a point where he will view all manifestations of life as so nearly akin to his own that he will cease to slaughter for pleasure.

Meanwhile, we will continue to exploit man's two great outdoor sports—hunting and fishing—as among the greatest developers of his character and soul, and will apologize for our wantonness and our twisted philosophy of life by saying that these things "serve to take him out of doors."

But it is my belief that during the next few years man should, and will, curb his passion for killing. He will become in reality what he calls himself—and what he positively is not—a sportsman. He will not continue to fight the efforts which curtail his selfish pleasures, as he fights them now, but will demand more stringent laws, and, what is important, will see to their enforcement. He will not only shorten his shooting seasons and decrease his bag limits, but will give wild life more chance in many different ways. The conservation departments of the various states will

To keep *all* your teeth *clean them all*

THE Pro-phy-lac-tic is designed to reach *all* your teeth. The curve of the bristles conforms to the curve of your jaw. The handle curves, too, so that you don't have to stretch your mouth out of shape to reach back molars.

Sold in three sizes by all dealers in the U. S., Can., and all over the world. Prices in the U. S. and Can.: Pro-phy-lac-tic Adult, 50c; Pro-phy-lac-tic Small, 40c; Pro-phy-lac-tic Baby, 25c. Made in three different bristle textures—hard, medium, soft—with white or colored transparent handles—red, green, orange. (A larger Pro-phy-lac-tic with four rows of bristles is priced 60 cents.) Pro-phy-lac-tic Brush Company, Florence, Mass.

cease to be the butcher shops which they now are, propagating only for slaughter, run always for the man who wants to kill, and always for that group which makes the loudest noise and apparently has the largest number of votes, irrespective of what is fundamentally right or wrong.

Not until this time, when man ceases to get his only perspective of wild life over the end of a gun barrel, will we recover what once we possessed, and now have lost. Then we shall have better fishing and hunting than we ever have had, and will indulge in those recreations like sportsmen and gentlemen, conceding that as our own intelligence and destructive capacities increase we must take less and less advantage of wild life, unlike so many of the present-day barbarians, who measure their gratification only by the quantity they slaughter, and not by the cleanness and beauty of the environment into which their quests have led them.

WHAT I intend to emphasize is that the destruction of wild creatures by man has ceased to be a necessity. He has grown beyond that. Other fields to conquer are offered him, wider fields, filled with the promise of greater adventure than he has ever experienced. He has space to triumph over, other worlds with which to become acquainted; he has the problems of life and death to solve.

Even the heavens are not too far away for him to begin to question. To the man in the cottage, as well as the man in the palace, modern life has given a thousand thrills to replace the thrill of killing, and both have reached a point where more good can come to them through watching wild life and its struggles to survive than through destroying it.

But man will go on killing. He must go on killing for a time. Savagery is still so closely a part of him that to divorce this passion from his soul all at once might bring calamity. He must actually see something *die* to be satisfied; and it is a theory, even preached in some of our churches and schools, that if we give him enough wild life to kill he will be restrained from killing his own kind.

That he must look upon some creature in the agonies of death to have his appetite appeased is proved in many ways by the highest types of our so-called "sportsmen" of to-day. An expert angler will say the greatest of all recreations is the playing of a trout, and that the adventure is over when the fish is in the creel. Yet he will not cast with a barbless hook and let the trout live after it has been conquered. A bird-dog man will maintain it is not the game he gets but the working of his dog that gives him pleasure. Yet he will not carry a stick on his shoulder in place of a gun loaded with powder and shot.

Man either lies to apologize for his wantonness, or he is so submerged in his egoism that he unconsciously thinks of God as a trickster and a mountebank, who created all other forms of life to be played with and tortured by him.

A break is coming in this wall of man's exaggerated opinion of himself. It was started by the killers themselves. A few years ago there was no limit to what one might slaughter in the woods and on the streams.

Then came the day when the slaughterers realized they must give wild life a certain amount of protection, or there would be nothing left to kill. Fishing clubs and hunting organizations came into existence. They multiplied until now there are two thousand Izaak Walton chapters and more than ten thousand hunting clubs in the United States. Fifty years ago there was not a conservation department in any state in the Union. The trained forester was unknown. In the year I was born, 1879, such terms as forestry, reforestation, forest fire prevention, and forest research were never found in the newspapers. Our timber resources were so great that people believed they would last forever.

Since then we have established well-equipped schools of forestry in twenty colleges and universities. We have thirty-three states with forestry departments. Every state has its department of conservation. Our national forests, set aside for all time, equal the combined areas of New England, New York, Pennsylvania, Ohio, West Virginia, and New Jersey. Our states also are acquiring vast areas of public forests. Newspapers and magazines are devoting hundreds of thousands of columns to further the work of conservation, where five decades ago the word was unknown in their offices.

A work which was started on a basis of personal selfishness and whose Golden Rule was "Save something to-day that we may kill to-morrow" has developed into a greater thing. Slowly it is giving birth to a sentiment of "Let live."

It is laying a foundation for a different religion and a different code of life. It is starting boys and girls out with broader and more healthful visions. In my own boyhood, I had a fine collection of birds' eggs and another of birds' wings. A dozen of my boy friends had the same.

To-day such things do not happen. Our boys, when they grow up, will not be the slaughterers their fathers are. These lads and the girls who will be their wives will bring about real conservation in the coming generation.

IT IS this "younger set" that has already begun to give conservation its first constructive force. The old-fashioned hunters, who are the killers, are being thrust into the background by vibrant youth which is wiser than its fathers ever were, and which has done more to blacken the good right eye of egoism during the past ten years than any other influence humanity has known.

The day is not far distant when the entire upper half of the state of Michigan will be an almost limitless Yellowstone Park, which will call unnumbered millions of tourists into its fastnesses, and it is the younger generation which sees this possibility, and is working to make it a reality, while the Old Guard—that horde of killers who believe conservation was invented for their pleasure alone—is still struggling to keep wild life at the ragged edge of extinction.

At the present time, in my own state, this Old Guard is making an effort to legalize the most barbarous of the devices man has invented for the slaughter of fish life—the spear. No more devastating influence has been known than this weapon of destruction.

City..... State.....

This Old Guard in Michigan—controlling the state legislature, just as the killers seems to control all state legislatures—fights to the last ditch against every progressive piece of legislation if it conflicts in any way with the Old Guard's personal pleasure and freedom in going out to kill.

If a bag limit is to be decreased, the politicians must first count the noses of those who are to be affected; if a license fee is to be increased that better conservation service may be rendered, the politicians must put their ears to the ground, and learn how the despoilers view the matter. A real protest from the Old Guard nearly always gets results, and this Old Guard would rather see the last pair of grouse shot than to close the season on them.

THAT legislation is not more constructive is not entirely the fault of the personnel of the legislature. It is the fault of the people who elect their representatives. At least fifty men, women, and children do not destroy wild life to one who does, and conservation should be more largely for these fifty than for the one. Yet the fifty, up to this time, have taken almost no active part in the matters of conservation so vital to themselves, while the one who is a killer has been exceedingly busy.

The progress we have made during the past few years has been the result of a slow awakening, and credit must be given to the fishing clubs and sportsmen's organizations which have made campaigns to bring into their associations women and children as well as men, and non-killers as well as killers.

Within the next half decade I expect to see progress made in conservation as important as that which has been achieved in air travel during a similar number of years, for when people realize that forests and streams and wild life are the greatest assets given to this earth, and that their own welfare rests not in destroying but in conserving wholeheartedly, and in harvesting with discretion, not only Michigan's state legislature but all legislatures will be compelled to bury their prejudices and, still "with their ears to the ground," will act for the multitudes and not for the few. *But the voice of the multitudes must be heard before this can happen.*

Women will eventually be the most powerful influence in this rehabilitation and glorifying of the out-of-doors. Their voice and their ballot can return to us the unpolluted lakes and streams we once had; they can reëstablish our forests, give us back the wild life which we have destroyed. When that day of earthly restoration arrives, we will have ceased to think in terms of slaughter; millions of men and women, instead of thousands, will go into the wilds to refresh their bodies and rest their minds, and they will not carry guns.

We shall then, perhaps, learn the truth, that without wild life there can be no forests, that without forests there can be no wild life—*and that, should wild life and forest life reach a certain state of degeneracy, human life itself would cease to exist.*

The open skies and the free air were intended from the beginning of things as

"Your Free Book Is So Helpful"
THOUSANDS of dog owners write in to praise Dr. H. Clay Glover's book, "Your Dog". Gives details on proper feeding. Explains all common dog diseases, giving scientific home treatments. Sent free if you write to: H. Clay Glover Co., Inc., Dept. A, 119 Fifth Ave., New York, N. Y.

Every Dog Has His *Off Day!*

EVEN the healthiest dogs need occasional medical treatment. And when a medicine *is* required nothing less than the best should be considered.

Foremost specialists in dog diseases recommend Glover's Imperial Dog Medicines. These tested prescriptions offer you the most ideal treatments for all dog ailments. Scientifically compounded to insure utmost safety for dogs of all ages and breeds. So easy to give that a child can administer them.

Complete directions are included with all Glover's Medicines. Sold by most drug stores, pet shops, and kennels.

Practically Every Dog Needs This Treatment

Most dogs of all ages and breeds silently suffer from worms. These intestinal parasites rob a dog of his energy, spoil his appetite and sleep and lead to fits, distemper and other fatal diseases. For prevention and quick, thorough remedy give Glover's Worm Capsules or the liquid, Glover's Vermifuge. All puppies should be treated monthly, and older dogs regularly four times a year to insure freedom from this most prevalent dog disease.

GLOVER'S
IMPERIAL
DOG MEDICINES

The way to protect your dog's health is to have necessary medicines always on hand. Below are listed those most frequently needed.

Glover's Worm Capsules	65c
Glover's Vermifuge	65c
Glover's Distemper Medicine	$1.25
Glover's Mange Medicine	65c

the greatest gifts to man, and it is there, if one is sick in body or soul, that one should seek. Whether it is a mile or a thousand miles from a city makes little difference. Nature is the universal law. It is everywhere. It is neither mystery nor mysterious. Its pages are open, its life is vibrant with the yearning to be understood. The one miracle is for man to bring himself out of the clouds of his egoism and replace his passion for destruction with the desire to understand.

I want to close with a story which I have told before.

I HAVE a very dear friend, a newspaper man, whose wife died. I don't know that I ever saw a man more utterly broken up, for his love for her was more than love. It was worship. He grew faded and thin, and a gray patch over his temple turned white. The efforts of his friends could do nothing. He wanted to be alone, alone in his home, where he could grieve himself to death. I knew that his case was harder because he was merely tolerant of religion. One day the idea came to me that resulted in his spiritual and physical salvation. I took him in my auto and we went out into the country four or five miles, opened a gate, drove down a long lane, and stopped at the edge of a forty-acre wood.

"Fred, I am going to show you a wonderful city," I said. "Come with me—quietly."

We climbed over the fence. I led him to the heart of the wood, and there we sat with our backs to a log.

"Now, just humor me; be very still," I said. "Don't move, don't speak—just listen."

It was four o'clock in the afternoon, that wonderful time of a summer day when Nature seems to rouse herself from midday slumber to fill the world with her rustling life.

"This is one of the most inspiring cities in the world," I whispered. "And there are hundreds and thousands of such cities, some of them within the reach of everyone."

The musical ripple of a creek came to our ears. And then, slowly at first, there came upon my friend the wonder of it all. He understood—at last. About us the air seemed filled with the whispers of a strange and wonderful life. Over our heads we heard a grating sound. It was a squirrel gnawing through the shell of a last autumn's nut. On an old stub, a woodpecker hammered. Close about us were the "cheep, cheep, cheep" and "twit, twit, twit" of little brown brush-birds. A warbler burst suddenly into a glorious snatch of song. A quarter of a mile away a crow cawed, and between us and the crow we heard a fox-squirrel barking, and, a little later, saw it, and its mate, scrambling in play up and down the trees. My friend caught my arm and pointed. He was becoming interested. What he saw was a fat young woodchuck passing near us on a foraging expedition to a neighboring clover field.

For an hour we did not move. Through all that city was the drone and voice of life, and that life was a song which soothed one almost to sleep. When, at last, my friend whispered again, "It sounds as though everything is talking." I knew the spirit of the thing was in him. Then I drew his attention to a colony of big black ants whose fortress was in a log against which we were resting. They were working. Two of them were trying to drag a dead caterpillar over my friend's knee.

When we rose to go I led him past a swale in which a score of blackbirds had bred their young. On a slender willow a bobolink was singing. A land turtle lumbered back into the water, and the bright eyes of green-headed frogs stared at us from patches of scum. Under a bush, a score of toads were teaching their tiny youngsters to swim. When my friend saw the little fellows clinging to their mothers' backs, he laughed—the first time in many months.

When we went back to the car, I said:

"You have seen just one ten-thousandth of what nature holds for you and every other man and woman. You haven't believed in God very strongly. But you've got to now. That's God back there in the wood."

THAT was four years ago. To-day my friend not only lives in the heart of nature, but he has risen to the managing editorship of a metropolitan daily. He has only his summer vacation in which to get out into the big woods, but he has made room for nature all about him. From early spring until late autumn his front and back yards fairly burst with life. And they are not, like most yards, merely for show and passing pleasure to the eyes. He has brought himself down out of the clouds of man's egoism, and is learning and taking strength from nature, which he now worships as the great "I am." He has developed a hobby for interbreeding plants, as he calls it, and especially gladioli.

Each morning in spring and summer and autumn he goes out into his garden, and from the thousand living things there he receives strength for his nerve-racking duties of the day; and at night, after his task is done, he returns to his garden to seek that peace which is the great and vibrant force of the life that is there. During the months of winter, he has his conservatory. And for more than thirty years this man hardly knew whether an oak grew from an acorn or a seed!

Yet he has one regret: More than once he has said to me, with that grief in his voice which will never quite die out: "If we had only found these things before, she would be with me now. I am convinced of it. It was this strength she needed to keep her from fading away—to build her up into joyous life again. Sometimes I wonder why the Great Power that is above did not let her live to go into the wood with us that day."

NEXT MONTH Albert Edward Wiggam hits another bull's-eye with his "Five Rules for Rational Living." Life is such a complex affair these days that anyone who can simplify and rationalize it so as to allow us to get more real "living" out of it is doing an inestimable service. And this article does that very thing.

Suppose—

You suddenly found yourself without a dollar—what would you do?

YOU may be a woman living most comfortably and happy in your lovely home, your devoted husband granting ry wish. Luxuries may come easily.

ou may be the daughter of fond and loving nts who keep you happy with lovely frocks, ing slippers and the things dear to the heart of a g girl.

ut you know—every woman knows that in her t she is not happy unless she has convinced herthat she can make money of her own. There is ething within you that says "you are a failure—a re and you are not happy until you try."

ad that's why so many plucky women and girls turning to this department of the Companion—y our way for turning spare moments into dollars cents.

have before me right now one of the sweetest rs received from a brave little woman living down ennsylvania who was prepared when the test e.

e writes:

My dear Miss Clarke:

Yes, I am thankful I jo ned the Pin Money Club, and I feel sure you will be interested to know my whys.

Ministers, you know, do not receive enough salary to save enough to live without working for any length of time, but my husband's health advised a complete change and rest. It was not easy for us either. However willing I was to help, I was handicapped by two small children—my boy was only fourteen months old.

No, this is not a "happy ever after" tale, for my husband died, leaving me with my two little ones: Dorothy, five and a half years, and Malcomb, a little past two years. It was, and is, hard, but I am so thankful I joined the Club when I did. Since my husband's death it has helped me to keep the home together for the sake of the kiddies. The money earned in the fall helped me make Christmas a reality for the children, even though my heart was sad and lonely.

I am expecting to keep on working for the Club.

YOUR OWN MONEY

ou want it. And there is a wonderful opportunity earning money—$5, $10, $25 or more—if you to me today. It is the simplest thing in the d to join us, and when your letter comes I have a let to send you. It is filled with letters from ied girls who never earned a penny until they ed us, and from business girls who are earning a dollars in their spare moments. You'll so enjoy ing it. Send for it today.

"Adventure, Here I Am; Come A-Shootin'!"

(*Continued from page 57*)

Museum of Natural History, was in Wyoming in charge of an expedition for the American Museum of Natural History, hunting for the fossil remains of ancient animals, particularly dinosaurs, around Laramie Peak, in the Laramie Mountains. Doctor Wortman wanted a man in his party who knew something about the country, but more particularly one who was well acquainted with the business end of a shovel. The job struck me as something different and I threw in with the expedition for the summer.

"When fall came, Doctor Wortman and his party headed back to New York, and I holed up for the winter, riding the range. Doctor Wortman came back again the following year, making Medicine Bow his headquarters and again I joined his expedition.

"The work gradually took hold of me. Many a time in my rides about the country I had noticed fossils in the rocks. but until Doctor Wortman came they only made me idly curious. But as I helped to exhume specimen after specimen, and asked questions, and heard camp-fire discussions, and learned how, by this seemingly meager evidence, scientists were reconstructing the zoölogy of millions of years ago, my imagination was captured and I was glad to accept Doctor Wortman's invitation to go to New York at the end of the season, and take a steady position with the Museum."

FOR six years, Mr. Miller continued in this newest job, spending his winters in New York and his summers in the field. He became steadily more expert in finding and digging out specimens, and developed the enormous patience required for those phases of the work done in the laboratory. Because of his skill, he came to the attention of Professor Samuel W. Williston, of the University of Chicago, one of the great pioneer paleontologists, who, in 1907, invited him to Chicago to continue his work. He has been there ever since.

"For the past twenty-eight years," he said to me, smiling, "it seems as if nothing has happened."

But I did not need to listen long to realize Mr. Miller's adventurous interest in his subject, and to know that many things have happened, in the quiet way of adventures of the mind. We went for a walk among his museum collections, and he pointed out tiny fossil skulls no bigger than a dime, of what once were probably lizard-like creatures; the huge skulls of ancient rhinoceroses; saber-tooth tigers large and small; tiny three-toed horses; a strange creature, different from anything now living, but resembling in some ways both a pig and a sheep; camels; full-grown deer hardly bigger than a cat; curious crawling amphibians; scores of ancient and long extinct creatures.

"Most people," Mr. Miller continued, "do not begin to comprehend what marvelous records of ancient times have

The busiest human beings *in the world!*

Active young minds, restless bodies! Always on the go, making *you* bear the burden of their questioning. Why not direct your children's energy to *themselves*, as leading educators suggest, forcing them to develop independence, resourcefulness?

* * *

Over 250,000 fortunate girls and boys three to twelve years old find an outlet for their ceaseless demands in Child Life—every month new things to read, to make, to do.

There are stories, poems, plays by such well known writers as Carl Sandburg, Padraic Colum, and others children love. Articles on music, plant and animal life, lives of great men and women.

Untold hours of happiness in the new games, puzzles, contests. Fascinating illustrations, many in black and white to be colored. For little girls, cooking and sewing. For boys, things to make with hammer and saw. Children's *own* contributions! Letters, stories, snapshots—something to keep every child busy and happy.

This Christmas no better appreciated gift at any price! Only $3 for twelve generous issues announced by an attractive Christmas card bearing your name. Mail check or money order today. Single copies at your news stand, 35 cents.

That's *One* Reason Why I Want 100 Men

who wish to TRIPLE THEIR INCOME

THE demand for *Fyr-Fyters* is growing fast. Five hundred million dollars' annual fire loss, 17,000 lives and the mortal dread of fire that's in everybody are reasons why we must get men in our open territory to take orders and supervise installation of *Fyr-Fyters*.

Selling *Fyr-Fyters* is comparatively easy, so powerful and convincing is the story of fire losses. Previous selling experience although desirable is unnecessary. Without charge we train our men to become high-powered salesmen in a short time, and they also become real fire-prevention experts. Earnings start immediately, no investment in stock or territorial rights asked.

Big Earnings Possible

Payne averaged $20.77 a day for 217 days; Graham and Mendenhall each averaged $100 a week working only part time; De Pries made $500 one week; Hill sold 1400 *Fyr-Fyters* in one sale. In our records are many other instances of earnings of $50 to $60 a day and incomes of $3600 to $7200 a year by *Fyr-Fyter* men.

An Amazing Story for You to Tell

Read your daily paper, listen to the fire alarms, ask your local fire chief, notice the inflammable material everywhere and judge for yourself the need of *Fyr-Fyters* and why we are able to make this offer. Let us tell you the sensational story which sells *Fyr-Fyters* so rapidly and puts men in the high-earning class so quickly.

Fyr-Fyters have the approval of the (Fire) Underwriters Laboratories, are used by Standard Oil, Ford Motor Co., International Harvester and many other of the largest concerns in the world.

Factories, stores, garages, auto owners, warehouses, schools, hospitals, farmers, private homes and other places use thousands of *Fyr-Fyters*. Thousands more await their installation. The market is vast, unlimited, and your earnings as a *Fyr-Fyter* Representative are only limited by your ambition and desire to work.

This Opportunity is for You

Among *Fyr-Fyter* men are former clerks, mechanics and others who saw in *Fyr-Fyter* their real opportunity. Now we are ready to appoint 100 more. It is your opportunity, your chance for $5000 or more, easily and quickly, from your first year's effort—$100 a week to start. Fill out the coupon below and mail immediately for full details of our offer.

This is the Fyr-Fyter, greatest of fire preventive appliances. Made by the Fyr-Fyter Co., 1622 Fyr-Fyter Bldg., Dayton, O.

been preserved in fossil form. Only in comparatively recent times have these records begun to be deciphered and understood. Ordinary fossils, of course, are common. Almost any small boy can pick up several in a day's ramble, if he looks in the right places. Anything preserved in rocks or other substances, which denotes the existence of former times, particularly ancient times of plant or animal life, is a fossil: an egg turned to stone, a shell, the burrow or trail of a worm, footprints, the leaf or fruit of a plant, the complete skeleton of an animal, or even a mere bone or tooth.

"MANY of the most interesting fossil remains, of course, such as those of the gigantic *titanotheres* which once roamed around this country, are to be found only in certain favored spots where conditions in ancient times were right for fossilization, and where conditions are right today for their exposure. For this fossil, a country to-day dry and desolate, with little vegetation, but once the flood-plain of a long-vanished river, is often suitable.

"You see, the animals in those times would sometimes be caught in the river and drowned, and their bodies, sinking to the bottom, were quickly buried in sediment. Water trickling through, fossilized the bones before they could decay. After hundreds of thousands and maybe millions of years the character of the country changed. Instead of being moist and humid, it became dry. Then the old, deeply-buried sedimentary deposits containing the fossilized skeletons became subject to erosion and cutting away by water or wind, and thus, in the course of time, a few, though only a few, of the fossils would be exposed to the eye.

"It is our business to find these exposed pieces, dig in to recover the complete skeleton, or as much of it as remains, separate it in the laboratory, piece by piece and bit by bit, from the surrounding rock, and, when we are through, if we are lucky, we possess for study, and perhaps for exhibition, the true relic of another creature that lived ages ago.

"In hunting for fossils, there is no such thing as haphazard digging: it is too likely to be labor lost. We go where the conditions are right for finding the kind of fossils we happen to be hunting. There are scores of good places in the western part of the United States, for example, as there are also in Patagonia, South Africa, India, Siberia, and, indeed, on every continent; and usually the best places are found in the rough, rugged, desolate parts of the country where little vegetation of any value grows, remote, as a rule, from cities and houses, and often very inconvenient to get to.

"Many times we have to build our own roads, if you can call them that: we merely dig, blast, or roll away the worst obstructions, so as to get through with a team and wagon. It is a common experience in field work to ford unbridged rivers; and if the water is running high and treacherous, it has occasionally been necessary to take the wagon apart and carry it across piece by piece on the backs of swimming horses. And sometimes your horses refuse to swim!

"We take whatever comes, too, in the way of wind and weather—and even an occasional mad bull. On a Texas expedition my only companion was an old man whom I had hired to cook and do camp work. One Friday he drove to town for supplies, to be gone until Sunday, leaving me alone. Toward evening I noticed a peculiar copper-colored cloud which previous experience had taught me to respect in that part of the country. I made the best preparations I could for the blow I knew was coming.

"In half an hour the storm struck. The wall tent went first, carried off as if it had been a feather. My snake-proof, canvas-bottomed sleeping tent followed, and after that went all of my clothing from my suit case, most of the pots and pans, and even the sheet-iron cook-stove. Then it commenced to hail, and the hailstones were the largest I ever saw. For protection, I jammed a tin bucket over my head; the din was deafening, until I stuffed burlap inside. This saved my head; but my arms and body, with only my clothing for protection, were severely cut. I tried lying down in a shallow gully with my face to the windward bank, but in five minutes the gully was bank-full with muddy water, and I was glad to evacuate.

"The worst of the storm soon passed, though it continued to blow hard all night; but not until about midnight did my fun really begin. We were camping on a cattle range. The cattle had been rounded up and driven elsewhere, except for one wild bull that refused to leave. Of course he chose this particular night of storm to pay a visit to my camp.

"Near at hand was what ranchers call a tank—a depression in the ground which has been dammed up to catch and hold rain water for stock, water being extra precious in that dry country. Probably the tank lured the bull to my neighborhood; and, likewise, it was my salvation. In a race against him on a straightway course, I would have had no chance. But I managed to sprint fast enough that night, when necessary, to keep the bull on the far side of the tank. He kept up the chase intermittently until daybreak, when he drew off into the brush to feed.

"SUCH incidents are matters of course. They are part of the hard work, and are quickly forgotten in the interest of the expedition. The true adventure is in the hunting, and the finding, of what you are looking for. I talked once with an old-time prospector who had roamed the mountains of several states in search of gold.

"'It's not the gold itself I hanker for,' he told me, 'nearly so much as the thrill of finding it.'

"So it is with fossils. What thrills me is finding them, and thus, perhaps, opening another window through which to look at and understand the otherwise unrecorded life stories of creatures out of the dim past.

"The find usually starts with the discovery of a small outcrop of fossilized bone. The first thing to be done, if the specimen looks promising, is to determine, if possible, what kind of animal it was, and which of his bones we have found. Knowing that, we can tell roughly where in the rock mass the rest of the skeleton, if preserved, probably is to be found.

"Then it is a question of digging all around it with pick, shovel, crowbar, or

"Christmas Lights a Candle in the Heart," *says* Albert Payson Terhune

"AND its rays, I like to think, reach out as far as our thoughts—to brighten the lives of those about us."

It is Albert Payson Terhune speaking—well known for his "Gray Dawn" and other famous dog stories and for his kennels of prize collies.

To send a shining ray of happiness into the home of a friend—that is the very essence of Christmas joy. And one can—with Christmas cards—multiply these rays a thousandfold!

Of course you will remember your friends and relatives this Christmas. But beyond them lies a still greater field for doing good. Many people make lists of orphans and shut-ins and residents of old people's homes—and to these, too, go "rays from the candle in the heart."

In the nearest good shop, this very minute, there are the brightest, gayest cards imaginable, awaiting your delighted choice.

Scatter Sunshine with Greeting Cards

whatever tool will do the work, often standing or lying in uncomfortable positions, until a mass of rock of the necessary size is isolated, containing, it is hoped, the skeleton. I usually dig down to the bone itself at several points, in order to assure myself that more of the skeleton than the outcrop is present; but, even so, I have had the disappointing experience of carrying home a big block of rock, only to find that it contained nothing but an insignificant fragment of fossil.

"NATURALLY, in the rough country in which we often have to work, it is sometimes quite an engineering feat to transport such a mass of rock, which may weigh several hundred pounds, from the place of the find to a railroad station. One summer, in New Mexico, I had my outfitting headquarters in the town of Rosario. Our camp was a good day's drive with the team from town. I left camp alone early one morning to drive in with a heavy load of fossils for shipment. Among them was a big block which later proved to contain a very fine specimen of *ophiacodon*, a curious, alligator-like amphibian that lived a couple of dozen million years ago. Expecting to reach town by early dusk, I carried no food or water with me. Between camp and town was a gully which was rather awkward to cross; but, by going into it slantwise, I had always managed it without trouble.

"On this trip, however, I found that since my last crossing there had been a cloudburst, and the gully had been converted into a miniature canyon with precipitous sides, only a rod wide, to be sure, but also a rod deep. I had no shovel with me, but I did have an ax, and some distance up-stream I noticed a clump of cottonwoods. So I made up my mind to construct a makeshift bridge.

"I cut down all the cottonwoods; they averaged about two feet in diameter at the stump. With the help of the team, I dragged the logs one by one to the crossing, and dumped them lengthwise into the gully. Gradually I filled it up high enough so I was satisfied I could get the wagon across.

"Since it was getting dark by that time, I decided to camp right where I was. I had no supper, of course, but that was all right: many a time before I had gone without supper when there was none to be had. Rolled in a tarpaulin, I went to sleep and slept soundly, satisfied I would make town easily by noon of the next day. But in the morning my horses were nowhere to be found. I discovered by trailing them that they had got into bad company; they had joined a band of wild horses.

"I was able several times that morning to get close enough to see my team contentedly grazing with the band. But every effort I made at a capture resulted in every horse taking to its heels, my own with the rest.

"At last I saw a mounted Mexican, the only person on the landscape. I hailed him and commissioned him to catch my horses and bring them to the wagon, promising him a couple of dollars for his pains. I took the long walk back to the wagon, thinking my troubles were over; but I never saw that Mexican again!

"This left me to do my own catching the following day. Fortunately, the

Save Your Eyes

Dr. C. W. Trail says:—"When I am not using the Farrington, my wife is using it; when my wife is not using it, our 8-year old daughter is using it. Every home should have at least one."

At last—a Long Felt Human Want is Filled by this great necessity—Dr. Farrington's portable

Reading Table for the Lap

Conserves the Life of Your Eyes

Here is the helper you have always needed. It saves your eyes—conserves your energy—insures correct posture—prevents eyestrain—permits concentration with **real relaxation** and absolute comfort. The FARRINGTON supports books, magazines, reading matter, typewriter, writing materials, etc., **at just the right angle to insure correct vision,** regardless of position. It will help everyone who reads, writes, draws, etc.

IDEAL FOR CHILDREN

Don't let your child hump! It's dangerous! Eyestrain, distorted organs, curved spine and retardation of normal development results. The Farrington compels correct posture.

Students Delight In Its Use

Prof. E. L. Eaton, University of Wis., says: *"It is a joy to read a book of any size, resting easily in a rocking chair. Thousands will now have a new joy reading while resting."* **With the Farrington every one can increase their capacity for mental effort.**

Sit right—read right—feel right

Think what this means! Comfort, enjoyment, greater mental and physical energies. Greater facility for the mechanics of reading and writing. **Genuine relaxation.** The Farrington allows you to assume a comfortable position when reading, writing, etc.

Indispensable to Invalids

Used with detachable metal legs for **Reading in Bed** by sick, invalid or crippled patient in home, hospital or sanitarium. Used on beach or in the camp for eating, cards, etc.

Ideal Gift Usable in so many ways, it will give many years of joyful service. Beautifully finished. Light weight (less than 48 ozs.) sturdily constructed, portable, folds to 1 inch. Size 12x18 inches. A handsome piece of furniture adjustable to any position.

Styles and Prepaid Prices

1. Natural Finish $6.50
2. Walnut Finish 7.50
3. Mahogany Finish 7.50
5. Genuine Walnut 9.50
6. Genuine Mahogany 9.50

Note: Special detachable legs for reading, writing or eating in bed as shown above $1.00 extra.

A 900% Increase
is what N. S. T. A. Training meant to C. W. Birmingham of Dayton, O. Raised his pay from $15 a week to $7600 a year.

Record Earnings
of $525 in a week for Wm. Shore, former cow-puncher of Neenach, Cal. Earned $3000 first 5 months after finishing training.

Raised His Pay
from $1200 to over $7200 a year, says F. G. Walsh, Springfield, Mass., who gives N. S. T. A. full credit.

~and They Started By Reading This Amazing Book!

Now—For a Limited Time—This Remarkable Man-Building, Salary-Raising Volume Is Offered FREE to Every Ambitious Man. Read it Without Fail!

Where Shall We Send Your Copy FREE?

A Book! Just seven ounces of paper and printer's ink—but it contains the most vivid and inspiring message any ambitious man can ever read! It reveals facts and secrets that have led hundreds of men to success beyond their fondest expectations! No wonder a famous business genius has called it "The Most Amazing Book Ever Printed!"

This vital book—"Modern Salesmanship"—contains some surprising and little-known facts about the highest paid profession in the world. It blasts dozens of old theories, and explains the science of selling in simple terms. And not only that—it outlines a simple plan that will enable almost any man to master scientific salesmanship without spending years on the road—without losing a day or dollar from his present position.

What This Astonishing Book Has Done!

The achievements of this remarkable book have already won world-wide recognition. The men who have increased their earning capacities as a direct result of reading it are numbered in the thousands. For example there is E. G. Kinzie of Michigan. "Modern Salesmanship" opened his eyes and he quickly raised his salary from $8 to $100 a week. L. A. Tinnes of Minneapolis made over $600 his first month after he had mastered Salesmanship. And F. L. Real of West Virginia, a former cigar maker, stepped into a position that pays him $4600 a year drawing account alone.

Big Demand for Trained Salesmen

Salesmanship is just like any other profession. It has certain fundamental rules and laws—laws that you can master as easily as you learned the alphabet. And through an exclusive feature of the N. S. T. A. System of SALESMANSHIP training—you can acquire the equivalent of actual experience while studying.

City and traveling positions are open in hundreds of lines and for years thousands of employers have called on us to supply them with salesmen. Employment service is free to both employers and members, and thousands have secured positions through this Service.

Free to Every Man

If we were asking two or three dollars a copy for "Modern Salesmanship" you might hesitate. But it is now FREE. We can not urge you too strongly to see for yourself what it can do for you, too. No matter what your opinion is now, "Modern Salesmanship", will give you a new insight into this fascinating and highly-paid profession. Mail the coupon now!

horses had grazed to a point much nearer the wagon, and my team, when I caught sight of them, were a few rods away from the main herd. Lying behind a bush, where I hardly dared to breathe for an hour, I watched them gradually increase the distance. Finally, creeping forward, I maneuvered until I was between my team and the wild horses. By good luck, I caught one of them, then easily caught the other. By the time I got back to the wagon, hitched up, and reached town, I had been three full days without food, and had drunk only such stagnant water as I could find here and there on top of the ground.

"Probably the most interesting find I ever made was in Texas. This, as it happened, was the result of pure chance. I was with Professor Williston, and had been hunting over a country with such poor success that I had about decided to try somewhere else. Riding in to camp one evening, I reached a declivity which previously I had always ridden around. But this time it occurred to me that if I got off and led my horse, I could make the descent all right and probably save a couple of miles.

"I did so. Near the bottom, my eye lighted on a spot where the water, whenever it rained, poured down in a miniature cataract, eating away the surface soil and rock. Right at that point I saw the fossil bone of some animal which I was quite sure I never had seen before.

"After unearthing the first fossil successfully, I found another directly underneath, then another, and still another. I kept digging downward on the same site for nearly two months, until I had a well-like hole six feet deep.

"It is by means of very complete fossil remains that we know as much as we do—and that is a good deal—about the life history of *smilodon*, the saber-tooth tiger, that picturesque and probably terrifying cat which at one time inhabited the United States. His kind died out some tens of thousands of years ago, though the entire cat family of the present day is descended from him. But the fossil records tell plainly where he lived, how he hunted, the usual manner of his death, and many other facts, and it needs only a little effort of the imagination to see him roaming our prehistoric jungles. It is by similar remains, too, that we know about the huge dinosaurs, the titanotheres, elephants, mammoths, and the curious tiny races of horses that ran wild here long, long before Rome was built or Troy dreamed of.

"THE field work connected with finding fossils is only a small part of the job. The rest must be done in the laboratory, and calls for pains and patience. It is necessary to remove the surrounding rock so that the fossil parts are left fully exposed and intact. For this we use hammers and chisels for the rough outer masses; but when we get close to the fossil substance itself, we use instruments of steadily greater precision. Indeed, our equipment is not unlike that of dentists, and includes similar fine drills, hammers, and motor-driven chisels, which can chip off the tiniest particles of rock.

"Innumerable fascinating questions arise as one pursues the work. For example, once upon a time the camel was a native of the United States; we find ample evidence that he lived here ages ago. Centuries and centuries have passed, however, since his race disappeared entirely in North America, yet in Africa he survives to this day. Why is that?

"Why did the rhinoceros, also a native of this country, likewise die out here, while his descendants, as everybody knows, still live in Africa? Why is the kangaroo to-day a native of Australia and of no other land, while traces of kangaroo-like animals are found in the rocks of many countries?

"There are scores of such questions, and bit by bit, as the years pass, the evidence accumulates to answer them. The pursuit of facts like that which await capture somewhere below the horizon of our knowledge—that is thrilling, that is adventurous, whether the pursuit takes place in the laboratory or the field."

Mr. Miller leaned back in his chair and glanced through a window at greening trees.

"In winter," he said, "when snow drifts out of low-hanging clouds, the laboratory is as pleasant a place as I know, what with the fascination of seeing the creatures whose bones we have found come back to life, as it were, beneath our hands. It is tedious work, but never dull.

"BUT along toward April, when the wind blows sweet with spring and days get longer, when green begins to come on the trees, when the air turns warm and thrills with the song of returning birds, then I think more and more of days and nights far away in the open, with mountain, and mesa filling the eye, bed rolls and camp fires, the tonic sun and air of high country, the sharp scent of sage and cedar—and the laboratory does not seem quite so pleasant.

"Sometimes, after being for weeks on an expedition, and suffering, perhaps, from bad water, food taken from tins, and hard work with ax and shovel, I think I am getting too old for that sort of life, unable to stand it as well as I used to. But after another winter indoors I forget the aches and twinges, and, like a bird of passage, go back as eagerly as ever.

"Being interested—that is the point! Professor Williston, with whom I worked intimately for years, was one who knew to the full what glorious adventures are to be found in interesting work. It was the month of August, in the year 1918. Doctor Williston then had lived a long time, indeed had nearly reached man's allotted threescore years and ten. But his interest was unflagging.

"I knew he was very tired physically. Frequently he would drop his head on his hands to rest. But he kept bravely rousing himself and returning to his work on the specimen before him.

"A caller came. Doctor Williston talked with him a little while, then lifted a tool and said:

"'You'll not mind, will you, if I work as I talk? You see, my time is getting short, and there is still a great deal left to do.'

"And later that day he exclaimed:

"'Ah, if I only had a little more time!'

"Interested to the last. Eager to go on, and on. Just a little after that, he died. Was not that a fine and fitting way for the life of a true adventurer to come to its close?"

"God Made the Heavens But 'Bonnie' Makes the Stars"

(*Continued from page 37*)

laxwell, Juliet Crosby, Katherine Alexnder, Eden Gray, Iva Wills Coburn, obert Ames, Anne Carpenger, are all onstellers."

I closed the book. The woman who lked with me was too compelling. Yet e had nothing of dominance about her. rom every inch of her small person she diates buoyant femininity. The arduous ears of work that have placed her in the nique position of manager, producer, and ar maker have touched her lightly. Her yes are brilliant; her step as light and pringy as that of a girl. Here is a pernality aglow with vitality, sending out ttle sparkles of friendliness.

"God made the heavens, but Bonnie ade the stars" Grace George wired her hen the Detroit playhouse was opened; ut although no producer living has made ore stars than Bonnie, she has done far ore than this. An actress herself, istress of a finished technique, she has eadily worked toward the raising of the andards of theatrical production. The ll-star revival of "Leah Kleschna," irected by her on Broadway just before oing to Detroit, demonstrated so fully er ability that William Faversham pubcly congratulated her upon her achievenent.

THE playhouse named for her, which she has managed for three years, is a uccessful commercial venture. Since its pening, January 1st, 1925, it has run ontinuously, winter and summer, its oors never closed on a single week day. t is an unusual theatre, with a unique olicy toward the citizens of Detroit. ight hundred members are enrolled in hat is called the Bonstelle Theatre Guild, hich is organized upon lines similar to hose of the Theatre Guild in New York ity.

Three hundred students are enrolled n classes in dancing and drama connected with the theatre. Credits for work done in these classes are accepted by the Detroit Board of Education. On the mezzanine floor is a foyer in which the artists of the city are encouraged to make one-man exhibits.

During Lent, the theatre is open for Sunday-afternoon meetings. From its stage, ministers of almost every sect have spoken to capacity audiences. Yet all this activity detracts not one iota from the professional work in hand. What is probably the most able stock company in America gives finished performances of a wide range of plays from farce to the classics, and from this company graduate to Broadway the stars of the near future.

"Have you any idea how it all came about?" I asked with bluntness. "Here you are, occupying an entirely new place in the world, managing a theatre with a novel policy that is an acknowledged success. Can you account for it?"

"Jessie Bonstelle hesitated for a moment, and then replied:

"Yes, I think I have the mainspring. It started winding a long time ago, when the great tragedienne, Madam Janauschek, died. I had played with her company—I'll tell you more of that later—and I went to her funeral. Madam had outlived her popularity. She, who had been accounted the greatest actress of two continents, died in poverty, and a scant handful of people came to the services. The officiating priest did not even know her name, and when it was repeated to him, he mispronounced it.

"I sat there, heartsick. I had been working hard through poverty and disappointment to make of myself a fine actress. And this—this was what it came to. For a week after I could not work. And then suddenly I saw. Madam was dead, but the *theatre* lived! All the fineness she had brought to it was there, never to be entirely lost. And the theatre would live—forever! I determined that from that day Jessie Bonstelle would be second and the theatre first. So my effort has brought me here and has identified me with the theatre. These boys and girls who are well along the road to fame have all had a great and genuine love of the theatre. If they had not, I could not have worked with them. No teaching or training will make an actor or actress out of anyone who lacks the God-given ability to act. But, given that, if you love the theatre you may hope to inspire youth, to give it confidence, to encourage it to work and study and go on to the bigger field waiting to receive it. This particular theatre, as you may know, was formerly a synagogue dedicated to God. Since I have been here I have come to feel that it is still dedicated to God."

AS I listened I recalled the comment of a prominent man of Detroit as I talked with him of Jessie Bonstelle.

"I've known her since she was in her early teens," he said. "She succeeds in what she undertakes because she is talented and works hard. But from the very first you could see how she affected the people with her. She works for the very finest ends herself, and so unselfishly that the people about her catch her wonderful spirit, even if they cannot always see her ideals. She goes out of her way to push people ahead."

With a reputation like this it is not remarkable that Jessie Bonstelle has always succeeded in securing unusual talent for her companies. Some years ago, when she was managing stock companies in Rochester, Buffalo, and Detroit, a handsome young man with a pronounced Irish accent called upon her.

"I am working as secretary to a lawyer," he informed her. "But I know that I can act. If you'll take me, I'll come with you and do anything at all, if you will give me enough to live on."

"Well, how much could you live on?" inquired Bonnie.

"A dollar a day," the young man stated. Bonnie looked at him, decided that he meant it, and shook her head.

Do gum troubles start at the dinner table?

DENTISTS agree that our modern diet is to blame for most gum troubles—the troubles that so often follow the appearance of "pink tooth brush." For our food—soft and luscious, artificially lacking in fibre and roughage—is powerless to stir the gums, to stimulate a healthy circulation of the blood within their walls.

Most practitioners recommend gum massage—with the brush or with the fingers—to provide the exercise gums need. And thousands of dentists ask their patients to brush their gums as well as their teeth with Ipana Tooth Paste twice a day. For Ipana contains ziratol, an antiseptic and hemostatic peculiarly beneficial to soft, weak and undernourished gum tissue.

Try Ipana for one month

Ipana is a tooth paste with a fine, clean taste and a remarkable power to whiten the teeth. The coupon brings a ten-day tube which will prove these things.

But a full-size tube from the nearest drug store makes a fairer test, for it contains over a hundred brushings—enough to demonstrate Ipana's power to tone and to strengthen your gums!

IPANA TOOTH PASTE

BRISTOL-MYERS CO. Dept. J-127
73 West Street, New York, N. Y.

Kindly send me a trial tube of IPANA TOOTH PASTE. Enclosed is a two-cent stamp to cover partly the cost of packing and mailing.

Old Briar

TOBACCO

"THE BEST PIPE SMOKE EVER MADE!"

If you'd ask me I'd tell you, give me Old Briar Tobacco . . . . .

OLD BRIAR TOBACCO brings to men far more satisfaction than the usual gift. All of the genuine pleasure, solace and the cheer of pipe smoking is in this gift. Men, everywhere, welcome Old Briar as they've never welcomed *tobacco* before. It gives them many hours of complete contentment at home—repose and satisfaction! Such comfort and pleasure is beyond price.

Light up your pipe filled with Old Briar Tobacco. Draw in its ripe fragrance and full-bodied aroma. Enjoy its natural tobacco flavor—its satisfying taste. Notice how cool it is—and how smooth. Now you know why Old Briar Tobacco is *One* gift every pipe smoker will welcome.

It has taken experts, with years of scientific knowledge in the art of mellowing and blending, with generations of tobacco culture back of them, to produce Old Briar Tobacco. Step by step Old Briar has been developed—step by step perfected. *It all shows up in the smoke!*

Make a Gift of Old Briar Tobacco to Yourself This Christmas and to Every Friend Who Enjoys His Pipe. Of All the Pleasures Man Enjoys Pipe Smoking Costs the Least.

IF YOUR DEALER DOES NOT HAVE OLD BRIAR

Tear out this coupon and mail to: A-12-27
United States Tobacco Co., Richmond, Va., U. S. A.

SPECIAL CHRISTMAS OFFER: On receipt of this coupon we will mail direct to you or anyone you name a $1 or $2 box of Old Briar Tobacco. In case you want to make more Christmas gifts send names and addresses for each gift—also send your card if you want it to go with your gift.

Send the coupon now, with bills, stamps or check. Insure Old Briar's arriving in plenty of time for Christmas.

TO DEALERS: *Old Briar Sizes—25c, 50c, $1 and $2—air-proof and sealed. If your jobber has not supplied you, write us and we will send you a supply by prepaid Parcel Post at regular Dealer's prices. Every size of Old Briar has our unlimited guarantee.*

UNITED STATES TOBACCO CO., RICHMOND, VIRGINIA, U. S. A.

"I'm sorry," she said; "but there really is no opening."

"But you don't understand," he protested. "I don't have to act. I'll do anything. I'll scrub the stage floor for you. I want to be here."

Stage-struck young men and women are no novelty to Jessie Bonstelle, but here was someone evidently much in earnest.

"All right," she agreed. "You're engaged. You are to scrub the stage floor for me at a dollar a day."

"He came," she said; "but he never scrubbed the floor, nor did he get just a dollar a day. I gave him a tiny part at a tiny salary. And I saw at once that he was right. He could act. To-day he is with Eva Le Gallienne in her New York repertoire company. His name is Alan Birmingham."

IN THE Bonstelle Company to-day there is a beautiful girl who appeared in a New York production, and who was an instantaneous success. She went to Bonnie and asked to come to her company.

"I need training," said the girl. "I'll come to your school."

"But I am afraid that would not be wise," Bonnie objected. "You see, you have had some experience and you have been successful."

"All right," said the girl. "I will change my name while I am in school, and no one need know." With this understanding, she went to Detroit, entered the school, and attended classes until an opening in the company gave her a chance. She is now playing ingénue lead under her own name, Joan Lowell.

"It takes courage of a high order to do what this girl has done," said Miss Bonstelle. Just such courage has sustained Bonnie herself in her upward struggle. From her initial performance in "Bertha, the Beautiful Sewing Machine Girl" to the management of the Detroit playhouse is a long, long way.

"And even Bertha was not the beginning," she said, laughing, "although that was my first stage appearance. My first appearance as a public performer was made at the tender age of two and a half years, and not upon the stage but in the pulpit! We were regular church folks, and I had been taught to carry tunes, and had mastered the words of a half-dozen popular hymns. When they led me to the pulpit to sing, they took off the huge Bible and stood me upon the desk, from which eminence I warbled the good old favorites, 'Keep to the right, boys,' and, 'I am a young abstainer.'

"My début was a marked success, and I continued to sing and recite. By the time I was nine I had memorized one hundred and fifty selections, a great many of which were excerpts from Shakespeare. My mother helped me to do that. Through long hours she drilled and encouraged me, with infinite patience and love.

"I have never been able to account for my mother's love of the theatre or for her ambitions for me. My father was a lawyer; but when his family grew to seven, and eight, and nine, he gave up law and bought a farm just outside of Rochester, New York. 'From a farm,' he said, 'I can always feed the family!' I was the eleventh baby. My mother was forty when I was born; but despite

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

ıe ten who preceded me her courage ran igh and her ambitions were undiminhed. All her life she had loved the ıeatre. When I came, Mother made up er mind that I should be an actress, and ıe deliberately fostered my childish inination to dress up and play.

"Before I was eight I was an emotional ctress with a Shakespearean repertoire. Vith a kitchen apron for a train and a uttonhook for a dagger, I played Lady Iacbeth. Rosalind, I found, went well ı the apple orchard. But my favorite ıeatre was a little-used gravel pit. Here acted and raved to my heart's content, aranguing the hilly sides with vigor and elight.

"I was theatre wise. Despite my father's isapproval, Mother had taken me to very possible performance. When I was ɜven a great event occurred. Madam anauschek came to Rochester. Mother ɔok me to see 'Meg Merrilies.' I am ound to say that Madam made very ttle impression upon me at this time; but ıere was a very handsome young man in ıe cast who wore a sugar-loaf hat and a ape coat, and who looked at me with ıerry eyes. I could not forget him. For ears I dreamed of him.

"I was a fragile, sickly child. School as too strenuous for me, so Mother ducated me at home until I was ten. ike many sickly children, I had an ugly nd violent temper. In all those years cannot remember Mother ever being ngry. But when I went to bed, I always ɔoked under my pillow, for there I might nd a little note. On good days I read ith misty eyes; but when I had been iolent the tears ran over. In the morning would slip into Mother's room and place note under her pillow in reply. Louisa lcott's mother had trained her this elightful way. It worked so well between Iother and me that we never bickered nd quarreled.

"After I was married, I recounted this cheme to my husband, and he thoughtully suggested that we make a pact that ve should never both get angry at the ame time. The first one angry was to be warning to the second to keep the peace. t takes two to make a quarrel, and we tuck heroically to our pact.

WHEN I was ten, I was sent to a convent school; but before I was ifteen I had left there and was entering ıpon my first engagement. A friend of ny uncle's was an actor and had seen me n amateur shows. He was taking out a oad company, and offered me a part. I ccepted in high feather. Mother agreed o go with me. I was cast for the deserted vife in 'Bertha, the Beautiful Sewing Mahine Girl,' and if you have ever seen hat old favorite, recently revived in a notion picture production, you can guess ıow well I fitted the rôle. I weighed just inety pounds, and my legs and arms vere all bones. Fortunately, legs were ıot on view in those days, but at one ɔoint I had to extend a hand and cry, I am that man's wife.'

"I made it as realistic as I could, but ɜvery time I looked down my broomstick of a forearm I doubted whether anyone n the audience believed me. The show was a failure, and when Mother and I arrived at New York on our homeward vay, we found we had just thirteen cents

TOBACCO

"THE BEST PIPE SMOKE EVER MADE!"

MADAM, the right tobacco means so much to him — give *him* Old Briar

GIVE him Old Briar Tobacco and you will give him more real enjoyment and contentment than he has ever gotten out of his pipe before. This Christmas, many thousands of women will get almost as much pleasure from their gift of Old Briar Tobacco as the men get themselves... When you see his enjoyment, when you, yourself, enjoy the fragrance of the smoke, when he tells you, as he will, that you've given him the best pipe tobacco he's ever smoked, your thoughtfulness will be more than repaid.

It has been the life work of experts, with years of scientific knowledge in the art of mellowing and blending tobaccos, that has produced Old Briar. Generations of tobacco culture have gone into its perfection. Its natural leaf—flavory, cool and slow-burning — has been developed and blended—and step by step perfected into the most satisfying tobacco ever made.

Give him Old Briar Tobacco, this Christmas. His appreciation will be whole-hearted and sincere. The friendly fragrance of your gift and its good cheer will be enjoyed by him every day.

STATE UNIVERSITY SYSTEM OF FLORIDA

between us. We knew if Father found it out that would be the end of the stage for me. Mother had written to my uncle, but she realized that while waiting for a reply thirteen cents would not last long. So we went to the station master where our trunks were held, and asked him to take them as security for tickets to Rochester. I've always remembered the Erie Railroad kindly, for, after some delay, we got our tickets and left the trunks. When we arrived home without them, Father was much upset.

"We had a hard time to keep him from writing the railroad, but we managed to hold him off until Uncle's money redeemed them.

"DISASTROUS as was this first effort, Mother refused to be discouraged. She wrote a playlet herself, and with the help of a musical friend we worked up a performance which took an entire evening, and which was designed to show my particular talents. This little sketch had a remarkable life; Mother and the musician and I traveled for months, presenting it at town after town. It gave me a good start, for I was offered a part in 'Chip o' the Old Block,' and started as a regular actress. Mother traveled with me. At fifty-six she played her first part upon the stage, and her happiness was no deeper than mine. But she stayed with us only a little while after that, and when I returned to the stage my sister traveled with me. The actor who had run the ill-fated 'Bertha' company wrote a play for Madam Janauschek which Madam highly approved. He told her of me and showed her a photograph, and upon that I was engaged to play a child part with her company. With fear and trembling, sister and I arranged to go to New York. The memory of Madam had faded; but I now realized her position and my great opportunity in playing with her. And, strange to say, I still had a very clear recollection of that young man!

"When we arrived at the stage in Brooklyn, we were told that Madam was conducting rehearsal. I begged for a peep around the scenes. I got it.

"In the center of the stage stood a huge woman. About her, voluminous petticoats bulged, layer upon layer, almost tentlike. On top of her head perched a tiny bonnet; she looked out from thick-lensed glasses; her ample feet were covered with Congress gaiters, flat-heeled and with gusset inserts. She stood with feet apart, a stein of beer in one vigorous hand, a rye-bread cheese sandwich in the other. I could hardly believe that this was the great tragedienne, beloved of two continents. And then suddenly she spoke. Waving the stein and the sandwich she called: 'No! No!'

"At the sound of that wonderful voice, resonant, compelling, I understood. Madam was very near the end of her career, the voice was all of her native attraction that was left. Another voice spoke. I peeped around the scenery. There were many people upon the stage rehearsing, but over near the opposite wing stood the young man of the sugar-loaf hat and the cape coat—the man I had remembered for all those years!

"I had a wonderful season with Madam. I studied the great actress with increasing appreciation of her technique. In this, the handsome man of my memories was a great help. He was Mr. A. H. Stuart, an able actor, and he became my good friend. He was twenty years my senior, but, after my mother, he was my first pal.

"At the end of the season the company disbanded and he went into stock. I was left, forlorn, to hunt an engagement. I wrote Augustin Daly. Daly told me later that he received at that time about one hundred and fifty applications a week for positions in his company; but for some reason my letter was answered. He offered me a position in the chorus and understudy at ten dollars a week. I took it.

"It was wonderful training to be with Daly, even as understudy for a chorus, and there were wonderful people in the company—Creston Clarke, James K. Hackett, Kitty Cheatham, and Mrs. Gilbert. Although my board would be eight dollars a week I decided I could make ends meet. I managed by giving music lessons. I secured six pupils at fifty cents a lesson.

"I almost starved that winter. I inked my fingers where skin showed through the holes in my black gloves. My board was meager; but one Jewish family where I gave Sunday lessons sensed my predicament, and that kindly mother always invited me to stay for a bounteous meal. I looked forward to that meal all the week. In the spring, when I was offered a part in a company going abroad I signed quickly. And then the manager frightened me. I refused to go; and Mr. Stuart found me, collapsed, hungry, scared, and out of work. I always think that he married me to take care of me. As for me, well, you must have guessed that to be taken care of by that handsome man whom I had remembered so long was nothing short of a miracle!

"My husband was a finished actor. He had been call boy with Edwin Booth. He brought to my love of the theatre fine traditions and high ideals. He sent me to the Forepaugh's Stock Company in Philadelphia, where he was playing, and I secured a part, because I could sing and play the piano. In two years at Forepaugh's, I played everything, from children, both girls and boys, to a leading part. It was twice-a-day stock. In the summer I went to Rochester with a stock company, and before I was eighteen I was cast for Camille.

"Well, I studied hard for three days, and played Camille, and the performance was such a success it had extra matinées all through the engagement."

ALTHOUGH the company continued throughout the season it was not a financial success and the house closed. Miss Bonstelle returned to New York. But the Shuberts, who were young men just starting in the theatrical business, had decided to add that house to their one theatre in Syracuse. When J. J. Shubert went to Rochester to find out what could be done with the recent acquisition, everyone there advised him to get Jessie Bonstelle.

"She's so popular here," they assured him, "she can make your house go—" So J. J. went to New York.

"You're coming to Rochester," he informed Miss Bonstelle, "and run a stock company for me."

"My goodness, I can't! I don't know how," protested Bonnie. "And, anyhow, I'm too young."

"So am I young," retorted J. J. Then both of them laughed, because they were young and it seemed absurd that such responsibility should be theirs. In the end she went, protesting, "But I haven't any money."

"All right," agreed Shubert. "I'll lend you enough for the first show." So she gathered a company and engaged a play for the second week. It was "Camille," which she thought had been popular enough to risk once more.

Before the first summer was over, the young manager was voted a success. Jessie Bonstelle not only put into the company her own ability and the charm of her own personality, but she was able, as always, to induce worth-while people to join her. In this company, and those at Buffalo and Detroit run under her direction, Fred Lewis, Frederick Eric, Margaret Mayo, Stephen Grattan, Margaret Wycherly, Francis Ring, Orin Johnson, Charles Hutchinson, now daredevil Hutchinson of the movies, all played with her at one time or another. Edgar Selwyn, then just beginning, joined her one year as an actor.

"He was one of the handsomest boys I ever saw," said Jessie Bonstelle, "and he had great, dreamy eyes that had a fine effect upon the audiences. But he wanted to write plays. He did a one-act sketch entitled 'A Night in Havana' and we produced it. It was, I believe, his first production."

A SUCCESSFUL manager before she was nineteen, Bonnie was never again allowed to be merely an actress. For seventeen years she ran summer companies, first in Rochester alone and afterward in Buffalo and Detroit as well. In the winter, she accepted various engagements. For five years she, in conjunction with Bertram Harrison, ran the Municipal Theatre at Northampton, Massachusetts, which provided a basis for her community house in Detroit. At various times she ran stock companies in Winnipeg, Halifax, St. Johns, Montreal, Toronto, at Newfoundland, and Providence, Rhode Island.

Although his own engagements prevented her husband from being with her in many of these ventures, he nevertheless remained her counselor and refuge. It is impossible to talk with Bonnie for five minutes without realizing that the marriage of these two was one of the beautiful factors of her life. When A. H. Stuart died, in 1911, she bravely carried on without him, working with new zeal toward the accomplishment of those ideals he had discussed with her, seeking to establish in the theatre that reflex of life that makes it such a great teacher.

The stock company, because of its intimate relationship to the people who patronized it, seemed to her the most desirable expression of the theatre. Even in New York City, she ran a successful stock company at the Harlem Opera House. On Broadway, she directed "10 U;" "Home Again;" "The Widow's Might;" "All Alone Susie;" "The Ruined Lady," with Grace George; the all-star revival of "Leah Kleschna;" her most famous production, "Little Women;" and other plays.

Digitized by Google Original from STATE UNIVERSITY SYSTEM OF FLORIDA

The struggle to get "Little Women" over marks a new phase of her character, that of patient, persistent effort against almost hopeless conditions. For years she had dreamed of producing a dramatization of the book, but the heirs of the Alcott estate were not friendly to the idea. After eight years of negotiations, they approved of the prospectus of a play based upon the book, written by Bonnie's old friend, Colonel Warren. But before he had completed it, Colonel Warren died.

With all her powers of persuasion Bonnie was unable to get any playwright of renown to tackle the subject. One evening she was talking the matter over with Marian de Forest, dramatic critic of the Buffalo "Express."

"Well, what are you going to do?" asked Miss de Forest. "Who is going to write the play for you?"

"*You* are," said Bonnie promptly.

"But I have never written a play!"

"But you can," urged Bonnie. "I'll help."

So "Little Women" was written. When it had passed the Alcott heirs there was a struggle for backing. Lee Shubert took a second, and finally William A. Brady took a third interest. At the first performance Bonnie's faith and struggle were justified. "Little Women" is one of those plays that, like the brook, will go on forever.

THAT the direction of the Detroit Theatre should be hers, seems logical. For fifteen years, she had managed a summer stock company in Detroit, where she was well known and heartily liked.

When the congregation of the Temple Beth-El moved to a new synagogue, and offered it for sale, someone suggested that it would make a wonderful playhouse. But it was some distance from the central district, and there was little faith that it could be made to pay. Then Jessie Bonstelle was sent for.

She proposed the plan of a community theatre, the seats to be sold mainly by subscription, and a close connection to be kept with the citizens of Detroit. With the impetus of her enthusiasm, plans grew. A syndicate, headed by the late E. H. Sloman, of Detroit, purchased the building and engaged her as manager. Under the supervision of C. Howard Crane the original building was remodeled into what is the most beautiful playhouse I have ever seen, and certainly one of the most beautiful in the country. When the name "Bonstelle Playhouse" went into electric lights over the doorway, Jessie Bonstelle felt that her ambitions had been crowned.

"How they all did laugh at me," she said merrily. "For when the 'phone rang I would answer it myself. I just wanted to be able to say,

"'Yes, *Bonstelle* Playhouse.'"

No stock venture of this magnitude had ever been attempted in any city in America. A task of considerable difficulty lay before the new manager. But her faculty of working with people served her well. The three years that have passed have justified the experiment. Last season was a dull one for the theatres of that city, yet with other houses dark, the Bonstelle Playhouse completed the year with a balance on the right side of the ledger, and a strengthened position in the community.

Photograph of a Belmont, Mass. home painted with 40-40-20

Brilliantly White When First Applied
Brilliantly White Throughout
Its Long Life
—that's 40-40-20 Paint

THE supreme tests of a white paint are its endurance and its ability to hold its color against Sun, Wind and Rain. Science has perfected a paint that successfully combats these destructors of man's handiwork—a dazzling white paint that does not darken—a paint that is brilliantly white when first applied and that stays brilliantly white during all of its long life.

The development of **40-40-20 paint** has been called the greatest advance in paint making in the last hundred years. It is made in ready mixed form in beautiful tints as well as in white, and in paste form for the professional painter's use. **40-40-20** costs no more than other quality paints.

The New Jersey Zinc Company does not make this paint. It is made by more than 130 paint manufacturers.

A *Booklet*—The whole story of this permanently *white paint*, **40-40-20**, is told in an interesting little booklet which is yours for the asking, free of charge.

New Jersey Zinc

Genuine 40-40-20 is made from The New Jersey Zinc Company's specified products according to its specially developed formula, and the manufacturers are authorized to use its registered trade-mark on their labels for paint so made.

Big Matt

(*Continued from page 11*)

at? Morris had been opposed to his nomination, and had been lukewarm during the campaign; did he think he could put something over on him?

In two years Morris would be coming up for reëlection; he was old, a back number, and in his wily way was already beginning to form his combinations.

"And it must be a matter of peculiar gratification to you," the senator was going on, "to have been chosen by the people of the finest state in the Union by the largest majority any gubernatorial candidate ever received."

Blake tried to appear modest, raised his hand to deprecate the senator's flattery; he wished that old Morris would come to the point. They chatted indifferently for a few moments, with an exaggerated and insincere amiability. Then suddenly, out of all that welter of words, the name of Matt Holt emerged.

"There is a man, Governor," the senator went on to say, "whom I may permit myself to recommend to your favorable consideration as an old and faithful supporter; I have known him for years intimately and favorably, as an indefatigable worker for the party, one who has toiled in season and out of season, without expectation of favor or anticipation of reward. I trust that you will find it possible to accord him that recognition which his merits deserve."

What did old Morris take him for? This praise, this recommendation of Matt Holt, this assumption that he did not know Matt, that their close and intimate friendship was not a notorious thing in the political world, was irritating, and all the more irritating because just now it broached a question that Blake would have postponed.

IT WAS all too patent: Matt had sent the senator there that morning to recommend him, and that was not very decent in Matt; it was too much like trying to force his hand in a delicate and difficult juncture. Blake had a notion to ask the senator why, if Matt was such a worthy fellow, he had not had him appointed United States Marshal when Matt unsuccessfully had sought that office.

But he forbore; nothing was to be gained by reviving old unhappy memories. The important fact that emerged from the orotund utterances of the senator was that Matt was going to demand his reward, and that it would be no small or insignificant one; he would ask, indeed, to be appointed Commissioner of Public Utilities.

And so Blake, indifferently, and with an easy laugh, while these considerations were flashing through his mind remarked: "Oh, you needn't tell me anything about Matt. I know him. We have been friends these long years, from boyhood, in fact."

"Ah, yes," said the senator. "Perhaps it was because of the peculiar relations existing between you that he felt a certain delicacy in approaching you, and so desired me to introduce the matter to your attention and bespeak your favorable consideration. I apprehended that you would view his claims with a benevolent and sympathetic regard."

"Matt knows that I would do that."

He began to doubt, after all, whether Matt had asked the senator to speak a word for him. It was more likely that the senator, assuming that Matt was to be appointed, was trying to get the credit of having brought the appointment about.

"Of course you understand," Blake hastened to add, knowing that any reply short of a brutal flat refusal would be considered a sacred promise, "I haven't given the subject of patronage any thought as yet. I haven't had the time."

"Naturally," the senator observed, with a courteous inclination of the head. "I merely desired to give you the benefit of my political judgment; and to endorse fully and unreservedly Mr. Holt for any position to which he may aspire. I would be inclined to leave to your more enlightened judgment the question as to whether or not his peculiar qualifications indicate him as the ideal or logical occupant of the important position of Commissioner of Public Utilities. However, I strongly apprehend that his appointment to some post worthy of his abilities and laudable ambition would greatly strengthen and consolidate our party throughout the length and breadth of the state."

Blake made no comment other than an ambiguous, "Oh, I see!" and, putting a question that he knew to be more pertinent than at first blush it seemed, asked:

"And your own prospects, Senator? Let's see, your term expires in two years, doesn't it?"

"It is a matter on which I have bestowed, as yet, no mature consideration. In fact, after having devoted so many years to public service, in the Senate and out of it, I regard the opportunity to retire to private life as very tempting."

"Oh, now, Senator, you mustn't think of such a thing!" Blake knew what was expected of him as a politician himself, and played the game, politely making the conventional protest to the conventional pretense.

Senator Morris rose, shook out the skirts of the morning coat, buttoned it, arranged the lock over his brow, fixed the expression with which he would appear before the crowd outside, and moved out of the room. When he had gone, Squire entered, carefully closing the door behind him, and leaning over the desk whispered:

"Big Matt's out there."

BLAKE wished that Squire would not invest Matt's first visit with so much mystery and importance. Was there anything strange or improper in the fact that Matt should come to see him? Squire would have to learn not to show his feelings so clearly—and not to use nicknames.

But Big Matt's bulk was already filling the doorway, and he came in now with a curious, almost furtive smile, and a quick glance of rather suspicious inquiry.

"Good morning, Governor," said Matt, as he took Blake's hand, giving him his new title with a scrupulous and significant respect.

Blake, observing the unusual quality in Matt's glance, felt, for an instant, a little embarrassed. The last forty-eight hours had brought him a new appreciation of his opportunities, perhaps a new conception of his responsibilities.

But now that Matt was there his intentions weakened; Matt's personality produced a queer effect on him; he could never be strong, assertive and independent in Matt's presence, and, before he knew it, he was clapping his hand on Matt's shoulder, and saying, with bluff, hearty enthusiasm:

"Oh, come off, Matt! What's got into you? Call me John, as you always did!"

The recognition of a change in their relations, implicit in this denial of it, apparently escaped Matt, who smiled delightedly and, flinging his overcoat over a chair and laying his hat upon it, said:

"Well, John then!"

He sank into the chair by the Governor's desk, passed his hand over his brow and sighed wearily. His hair was damp and sleeked down like Eddie's; his eyes were red, the pouches about them swollen, and his large cheeks showed the effects of a long steaming by the barber.

"Lord!" Matt exclaimed. "Never got to bed till five o'clock this morning! Sat in a poker game over at the Stanley—Judge Wilkinson and Hugh Garrett and Barney McGuire and Doc Sloane, and a lot of the boys."

Matt suddenly ducked his head forward, and spat at a large brass spittoon, accurately, making it ring like a gong. Then, drawing his hand across his mouth, he looked about him, and finally said:

"Well, John, here we are!"

JUST what did Matt mean by "we"? Blake wished that Matt wouldn't count himself in on it in this intimate way, as if they had both been elected, and were jointly occupying the governor's chair, like those old Roman Consuls, or whatever they were called.

But there was nothing to say. Matt was looking about him, peering at the portraits on the wall, as though they had a new interest now that his friend and comrade of a lifetime had been added, and largely by his efforts, to the long and distinguished succession.

Feeling that past governors and their troubles offered a safer subject of conversation than the present and his problems, Blake observed:

"Those are the men of an older and, in some respects, abler generation."

"Yes," acquiesced Matt, still gazing up at them, "in some respects, but in darn few. I expect, John," he concluded, turning 'round and looking at his old friend with an eye that, however affectionate, was often narrowed by the cynicism his long experience of politics had bred in him, "I expect that if the truth was known about them, they'd be found to be about as big humbugs as any of us!

"'Course," he added, after he had rung the bull's-eye of the spittoon again, "I ain't talkin' about you; I'm talkin' about the rest of us—me and old Morris, for

Into thousands of cultured American homes will come Dr. Eliot's Five-Foot Shelf of Books on Christmas Day. Every year more people give their loved ones this most lasting of gifts.

It took twenty centuries to make *this* Christmas gift for you

SIX YEARS before he compiled his famous Five-Foot Shelf of Books, Dr. Charles W. Eliot of Harvard wrote an essay called "The Happy Life."

"Books," he said, "are the most constant of friends, the wisest of counsellors, and the most patient of teachers. It is a mistake to suppose that a great deal of leisure is necessary. A few minutes a day, devoted affectionately to good books, will make all the difference."

All the difference! The difference between the plodding clerk and the clear-thinking executive. The difference between the deadly bore and the interesting talker. The difference between success and failure—in business and social life.

Because he believed what he said, Dr. Eliot undertook the colossal labor of editing and arranging the 418 masterpieces which make up his greatest work, The Five-Foot Shelf of Books. Tracing the progress of civilization through more than twenty centuries, this library contains in truth the essentials of a liberal education.

And today thousands of cultured families, in whose private libraries these fifty volumes have a place of honor, are ready to testify to the value of Dr. Eliot's guidance and the truth of his words.

Is Dr. Eliot's Five-Foot Shelf of Books in your home? Now is the time to get it at last. At least send now for the interesting book called "Fifteen Minutes a Day" which describes these famous Harvard Classics. It is absolutely free to any reader of this magazine who wants it. Your name and address on the coupon will bring it by return mail prepaid. Do not delay. The time to act is now.

Give yourself and your family a *real* Christmas gift this year—a lasting gift, a worth-while gift.

USE THIS COUPON NOW!

P. F. COLLIER & SON COMPANY
250 Park Avenue, New York City

By mail, free, send me the booklet that tells all about the most famous library in the world, describing Dr. Eliot's Five-Foot Shelf of Books (The Harvard Classics), and containing the plan of reading recommended by Dr. Eliot. Also, please advise how I may secure this supreme Christmas gift and pay for it in small monthly payments.

instance. But I want to talk about you; I want to look at you, see you sitting there in that chair! It does my old eyes good! What'd I tell you years ago? Come true, didn't it? Gosh, how I've worked for this! And, say, when I saw you yesterday I sure was proud! That inaugural speech was a peach. You didn't see me, but I was there, tucked away, in a good seat in the House. I just said to myself, 'I want John to have this day all to himself!'

"And when you got to that point where you said that about the people—how's it go now?—'I believe the government exists for the people and not the people for the government'—you know—something like that—and all the people yelled—well, I was that proud! I says to Judge Wilkinson, 'Judge,' says I, 'he'll be in the White House, you'll see!'"

"Oh, Matt!" Blake protested.

"No, honest to God, I mean it, John. That's the stuff to give 'em! They eat it. I don't see how you think it up!"

And he leant back in his chair, plunged his hands in his trousers' pockets, and gazed on Blake as on the work of his own hands.

BLAKE was accustomed to Matt's devotion; he had grown used to it; he took it for granted, as a matter of course; but just now it warmed his heart more than ever—burnt, in fact, a little; what if Matt knew that he, in his new position, had a slight suspicion that their old intimacy would prove to be something of an embarrassment?

But he liked Matt; he had never had such a friend, one he could always count on. How could he ever get along without him? There were, for instance, a thousand things that he wished to ask Matt, a thousand points of practical politics on which he wanted his advice; he had been so used in the past to depend on Matt. Matt knew men, he knew politics; he could give all the other politicians in the state cards and spades; he was foxy, Matt was. He always knew how to wriggle out of a tight hole.

Blake did not like to think of getting on without Matt. But, confound it, the most perplexing problem before him at that moment was precisely one that he couldn't submit to Matt's judgment—how to keep Matt's friendship without appointing him Commissioner of Public Utilities.

Matt could have told him how to do it; he would have balked at no expedient, except one—that of going back on a friend. In Matt's code, that was the unpardonable sin. Matt was loyal to every private and personal interest, though his public conscience, perhaps, had not been so extensively developed. And Matt would expect to be consulted in the distribution of patronage, to say who, among all the victors, was entitled to the spoils.

For Matt had made many a bargain, many a promise in the campaign, made them in Blake's name, with his authority and approval; he must talk with Matt about that, but—not just yet, because it would raise the question of Matt's own reward.

He apprehended, as Senator Morris would say, that Matt had been too accurately reading his base and disloyal thoughts, and his heart beat with a slight fear when Matt, leaning slightly forward, and speaking, as he always did when he grew serious and confidential, out of the side of his mouth, began:

"Say, John, what did old Morris want? Talk about jobs for his fellows?"

But that was easy! Blake felt relieved and, placing the fingers of his two hands together, tip to tip, and swinging gently from side to side in his swivel chair, he said, with a smile that he trusted was fond enough to reassure Matt—if he had any doubts:

"Well, he said a lot of nice things about you, for one thing."

"Oh, thunder!" exclaimed Matt, in disgust. Then he said, dryly: "Great talker, old Morris. He can set his mouth a-goin' and go 'way and leave it, and come back in an hour and find it goin' still."

"I told him," Blake went on, "that that was hardly necessary, as I knew you about as well as anyone. And I concluded it meant that you were going to be for him for reëlection."

"Well, yes. I thought this was a good time to have everybody get together and create harmony in the party. Morris is old, and no good anyhow; but he's out for reëlection, and it's better for you to have a dead one like him than some young and active fellow who might make trouble. You may want to go to the Senate yourself, you never can tell; and if we keep old Morris alive as a candidate, that warns everybody else off; and if, at the last minute, for any reason, we want to knock him out, why, we can do it. See?"

"Yes, Matt; but—"

"No, just you wait a minute. I'm for old Morris until you tell me to be for somebody else. I don't know what he said about me, and I don't care. I don't have to have anybody go to you in my behalf. There's plenty of time to talk about that. I don't want to bother you now. A little later I'll have to talk to you about one or two little matters; there's two or three fellows that have got to be taken care of—several that I promised, like Doc Sloane, and Sam Wall—and some others who helped.

"But that can wait. Just now you've got trouble enough; there's a lot of it sitting out there now on your doorstep"—Matt jerked his thumb over his shoulder in the direction of the antechamber—"waiting to come in: office-seekers, labor skates, Reverend Mills of the Anti-Saloon League, and that old what's-her-name—Mrs. Joseph Cullteton Cooke, of the Woman Voters' League— By heaven," Matt broke off in a kind of parenthesis—"that's one thing that gets me: this women-in-politics business!

"POLITICS is no place for the womenfolks. They ought to be at home, lookin' after the kids. They can't do both—run the house and the Government too, and play the society game at the same time. It's too big a strain. Why, it takes all my time to attend to politics alone—I've had to neglect everything else. I tell you, John, nothing in the whole campaign gave me the trouble they did; it's a new trick in the game, and I wasn't on to it."

"You did pretty well for a raw hand," Blake reminded him.

"Well, at that," Matt admitted, modestly, on second thought, "we got 'em. But it wasn't me, John. I kept out of their way; women hate an old political boss like me. You're the one that got 'em, because you look the part. You see, every public man's got two personalities: one is his own, what he is to his family, his wife, his kids, his friends. The other is the personality he's got for the public; the newspapers make that.

"Now, the newspapers have given you a good personality; it's a great asset; you want to hang on to it. It isn't hard to keep, once it's made in the public mind—if you stand in with the newspapers." Matt suddenly looked at his watch, started up and seized his overcoat. "And now, I must be going. I want to catch the one-thirty-five for Centreville. I'll be back again next week."

A few minutes later, Blake heard Matt's loud voice outside, as Matt addressed the reporters:

"I want to tell you boys something. I don't know as it's very startling news to anybody, but you can print it as coming from Matt Holt, that I've known this feller ever since he was knee high to a grasshopper, and he's going to make the best and greatest governor this state ever had, bar none. And what's more, he's going to be the next President of the United States!"

BLAKE, in the brief moment that was his before another caller claimed him, thought of what Matt had said about the two personalities with which every public man is endowed. Matt was right, as far as he went; the newspapers in a democracy could make or break a man.

But a man had another, a third, personality, that one away down deep inside him, that one which was really *him;* the one he made himself, in private, in secret, so that it was never known to anyone outside, either to his family, his wife, his kids, his friends, or to the newspapers; and that third personality was the real one; it was himself.

How was he going to be a successful governor and hang on to that personality, and stand in with himself?

However, nothing was to be gained by thinking of such things, and, besides, he didn't have the time just then. For Squire was always showing in some caller.

There was no end of them; they came in grinning affably—just for a second; they didn't want to take up his time; they knew how busy he was; they only wanted to shake the hand of the new governor and congratulate him. Then they would talk for a while, ask their favor, and Blake would perhaps not exactly promise, but say that he would see what he could do. And all the time he would be thinking about Matt.

He thought of Matt while he was talking with Mills, superintendent of the Anti-Saloon League, whereas he ought to have been thinking of Mills, watching him like a hawk; he had to be careful of what he said to Mills, and not offend him, or arouse his exceedingly sensitive suspicions. He didn't like Mills; but he was afraid of him because there were hundreds of thousands of votes that Mills could cast any way he pleased.

And so Blake listened to Mills attentively, hoping he wouldn't stay so long that the distrust of the liberal element would be aroused.

A Christmas Gift . . .

that comes twelve times a year

What gift could you offer this Christmas, more appropriate, more expressive of your heart's good wishes, than a year's subscription to The American Magazine?

A well-known lawyer tells us this story, as he asks us to send The American Magazine to a list of his business associates, as his Christmas gift:—

He had guests for dinner one night recently, and after dinner—bridge.

His little boy, a curly-head of nine, had worked all that afternoon on a surprise for his father. Before the guests arrived, the lawyer went to kiss his son good-night. But curly-head detained him, whispering shyly—"Dad, I made this for you. Good-night." Then he darted off to bed.

The father looked in surprise. In his hand was the gift—a crude little bridge-score card, carefully ruled and bound with string. On the rough front cover these words were traced:

"Dad, I hope you win."

Of all the gifts he had ever received, none had touched him so, given him half the pleasure that came from this one. Because it was a token of love and affection—a gift from his little boy's heart.

Isn't that the kind of gift you would like to receive this Christmas—and to give? Not a gift that costs too much and does little good to you or its recipient, but a gift from the heart—a gift that says: "I hope you win."

As though you said to your friend "I can't express all the things I feel but—Bob, Jim, Bill, Dad, *I hope you win.*

"I hope you win success in your business. So, to help you on, I am sending you the life stories of other men and women who tell you how *they* won it.

"I hope you win new knowledge of your world, of nature and health, of the hearts and minds of your fellow Americans. So I am sending you story-articles on popular science and psychology, on your money and your health.

"But most of all, I hope you win true happiness—you and all your family. So I am sending you true stories and fiction stories, to bear you away for a while to lands of romance, to bring you inspiration and help in all your plans, and the wise companionship of the best minds in America.

"And because I wish you all these things not only on Christmas day but on all days, I am sending you The American Magazine for a year.

"I shall be with you as you open its pages each month—in the person of your American Magazine—wishing you courage and happiness, *hoping you win.*"

To announce your gift

We shall send a beautiful Christmas Card painted by Herbert Paus. It will be reproduced in nine soft yet brilliant colors, just the kind of card you would choose yourself. It will arrive in the Christmas mail, bearing your name and announcing your twelve-fold gift. But don't delay. Soon the mails will be overburdened and delays will be inevitable. Make out your list now, pin it to the coupon below, and mail it in today. We'll do all the rest.

Our Special Christmas Offer

The regular price of The American Magazine is $2.50 a year. But during the Christmas season we are making you this special offer: your own subscription and one for a friend as a Christmas gift, both for only $4.00. And you may add as many more Christmas gift subscriptions as you wish, at $2.00 each. (Your own subscription or one gift subscription is $2.50.)

Clip here, then sign and mail the coupon today!

The Crowell Publishing Company, *Springfield, Ohio*

Please enter my own subscription to The American Magazine and also send it for a year with the Christmas card announcing my gift, to the following. Enclosed you will find $____in full payment. (Fill in the amount—$2.50 for one; $4.00 for two; $2.00 each additional one.)

	(With Christmas Card, to)
My Name	Name .....
My Address.....	Address .....
City	City .....
State.....	State.....

If any name you send us should already be on our subscription list, the new subscription will start when the present one expires. But we shall announce your Christmas gift just the same. If you send more than one Christmas gift subscription, pin your list to this order form and add $2.00 for each.

Mills was saying that he had no doubt that cordial relations and a good understanding would exist between him and the new administration, and Blake assured him that he could rely on that. Mills wouldn't take up any more of his time just then, for he knew how busy the Governor was, but he was glad to be able to give his friends assurances that the new Governor would faithfully carry out his campaign pledges.

AND there was just one other little thing he hoped, that Matt Holt, who was somewhat too well known as a political boss, would not be entrusted with any responsibilities that might affect moral interests, especially those that Mills represented. Oh, of course not, of course not; Mills and the moral interests could rely on that.

"That will be satisfactory, then," said Mills.

Strange, thought Blake, that everybody should be so curiously interested in Matt, and anxious to know what place he was to occupy in the new administration.

It was the very first question the reporters put to Blake when, his long morning over, he appeared in the anteroom. They gathered in an eager group about him, barring his way, and began to fire questions at him about Matt Holt. What had Matt come for? What did he want? What was he going to get? What had he said? Had he made any demands?

Blake was somewhat unnerved by this bombardment; but he remembered what Matt had said about standing in with the reporters, and smiled, and protested with an air of good humor:

"Oh now, boys, not all at once!"

And then the oldest of them—the dean, as it were—Colvin, correspondent of the leading metropolitan newspaper in the state, caught the Governor's eye, and asked:

"Governor, may I ask if the appointment of a Commissioner of Public Utilities was discussed with Mr. Holt?"

"No," said Blake, "we didn't talk politics. We talked about old times down in Allen County!"

The dean turned away, satisfied. But there was a young reporter there representing "The Star," a sensational newspaper that claimed to be independent and so was opposed to everybody, and he planted himself before the Governor.

"Then you have nothing to give out to-day?"

"No," said the Governor.

"Is Matt going to get the job?" the young man persisted.

A cigarette on the youth's stained lips bobbed up and down impertinently with his words; in his small eyes Blake saw the gleam of an instinctive malice and animosity. He hated the young fellow, and made no reply to his question, but brushed him aside and went out.

That evening, when he picked up "The Star," he saw on the first page, black headlines, which read:

BIG MATT TURNED DOWN

Governor Blake Refuses to Name Boss to Fattest Job

The article began:

The new state administration had not been seated one day in the saddle before a rift loomed in the wave of harmony which swept it there, and threatens to stage a sharp split in the party ranks, it is said.

Big Matt Holt, the boss and chairman of the State Central Committee, who has been credited for years with being a stanch friend and hot supporter of Governor Blake, and who managed the recent campaign last fall which landed the Governor high and dry in the gubernatorial chair, was an early caller at the State House this morning. The wily Matt was slated, so those who were wise to the inside situation said, for the job of Commissioner of Public Utilities, the fattest plum in the gift of the Governor.

Political circles around the State House were expecting the announcement would be made this morning, but there was nothing doing, and Big Matt failed to connect. He was kept waiting in the antechamber for an hour while the new Governor read his morning mail and otherwise got good and ready to receive him; but when he came out, after an hour's conference with his friend, though he tried gallantly to put up a merry front, and declared he was for the Governor for President, it was plain he had not gotten what he came after.

This was confirmed by the Governor at noon when he announced to a representative of "The Star" that nothing had been decided at the conference. Big Matt took an early train home for Centreville, and his friends say he went away sore and in no happy frame of mind, without saying what his future course of action will be. The public utility interests will demand Holt's appointment, it is thought.

Political circles at the Capitol are frankly amazed at this new turn of events, and politicians are anxiously asking among themselves if there is to be an internecine political conflict staged at this early hour of the proceedings. Holt's friends are openly indignant at this latest development and hint broken promises, it is alleged.

One significant fact is seen in the visit to the Governor this morning, immediately after Holt's early call, of Superintendent Mills of the Anti-Saloon League, who, the well-informed say, protested Holt's appointment on the ground that he was not acceptable to the moral interests of the state. Back of the action of the Governor lies a determination on his part to break away from the machine which engineered his nomination and election, and to be his own boss, it is said. No announcement was made as to who would be appointed Public Utility Commissioner.

AS BLAKE read the article, he began to swear, but under his breath, to himself. He pressed the button under his desk, and when Squire appeared, his blue eyes wide with wonder, Blake began to swear aloud.

"When that miserable whelp from 'The Star' comes in," he said, "throw him out!"

Then he began to think of Matt, of how he would feel when he read it, and he thought that he should write Matt a reassuring word. But on second thought, he decided not to do this; it was unworthy of him, unworthy of Matt, unworthy of their friendship. Matt would be back in a few days anyhow. Better to talk things over. What was it that old Elijah Gates once said: "Don't write; send word."

However, other newspapers in the state took up the story, and before long it was assumed everywhere that Blake and Holt had had a falling-out. Then the leaders in the party became concerned and began to take a hand. U. S. Grant Fenshard, the attorney general, came to see Blake.

"For heaven's sake, Governor," cried Fenshard, in his nervous, self-important way, as he came bustling into the Governor's chambers, a scowl on his sandy face, "you aren't going to let this row with Matt Holt go on, are you?"

"I have no row with Matt Holt!"

"Well, the newspapers say, everybody says—"

"The newspapers! Everybody!" exclaimed the Governor. "What do they know about it?"

But Fenshard shook his head doubtfully.

"Matt hasn't been here since the day of inauguration. He must feel that something's wrong. It would be too bad to have a split in the party."

"Would you appoint him Commissioner of Public Utilities if you were in my place?" asked Blake, curious to know whether Fenshard was ready to assume the responsibility of a formal recommendation, for Fenshard had ambitions higher than the attorney general's office.

"Well," Fenshard temporized, "you don't want him to get sore."

Blake was relieved; but he kept Fenshard a while, seeking to reassure him. He knew how touchy Fenshard was, how difficult to get along with.

IT WAS true, as Fenshard had said, that Matt hadn't been back since that first day; he was to have returned in a week; now three weeks had passed, and no sign of him. Was Matt really sore? Were Matt and he, between whom there had never been a shadow of a difference, much less a quarrel, drifting into open enmity? They ought to have an explanation; he ought to send for Matt; a word would dispel the misunderstanding.

And yet, there was a point of pride; after all, he was Governor; Matt ought to come to him; if Matt was pouting, if he was sulking like Achilles in his tent (as several of the newspapers had classically put it), then let him sulk; he wasn't going to humor him, to beg him to come out.

Besides, Matt oughtn't to have allowed things to reach this pass; he oughtn't to have embarrassed him; when he saw that his appointment would not be popular, he ought to have relieved him by announcing that he would not accept it.

Perhaps, after all, the best thing to do, the easiest way out, would be to let the situation drag on until Matt was worn out, and then, some day, appoint someone else.

There were as yet no candidates for the place; it had been so generally assumed that it had been preempted by Matt Holt that no one else had thought it worth while to try for it. But, a few days later, Senator Pedley came to see the Governor, and suggested a man named Stibbard for the position.

Blake had never heard of Stibbard; but that was not surprising, for, from Pedley's description, it was evident that Stibbard was a man of such immaculate reputation, of such lofty and disinterested character, that he had never in his life stooped to anything so low as politics. Indeed, Stibbard only consented now to allow his name to be brought forward because the public weal required that a man be named as Commissioner of Public Utilities who was above suspicion.

Pedley was a man whom Blake thought he ought to like because of his perfections; but he didn't like him. Pedley was a reformer; that is, he was a bore.

He would come to the Governor's office, sit by the hour, smiling blandly, and in a soft, monotonous voice explain in detail

Your parties won't sparkle unless you do!

HAVE you ever noticed how much the success of your parties depends on how you feel? If the day finds you sluggish, headachy or dull, all your skill as a hostess, all your most ingenious preparations, seem to go for nothing. You cannot get your guests "started," cannot communicate to them the party spirit.

And no amount of struggling with yourself, no amount of secret, panicky effort to seem gay, confident, full of infectious high spirits, does any good. If anything, it makes matters worse. You must *feel* well in order to be yourself.

Yet feeling well, if you are normally healthy, is quite simple. You may not have realized it, but that dull, loggy feeling often results from a sluggish intestinal tract. It is here that ENO, better than anything else, may help you. A dash of ENO in your morning glass of water promotes intestinal regularity—very effectually, yet very gently and safely. There's nothing harsh about ENO, either in its taste, or composition, or its laxative action.

Thousands of hostesses have learned that some of the delightful effervescence of this famous saline is likely to get into their own conversation after a drink of it. Thousands of women find household duties easier and pleasures keener since they adopted the ENO rule of health.

Get a bottle of ENO today. A dash in a glass of water makes a cooling, delightful drink. You'll enjoy it.

ENO, world-renowned for over half a century, from all druggists, 75c and $1.25 a bottle. Prepared only by J. C. Eno, Ltd. Sales Agents: Harold F. Ritchie & Co., Inc., Belmont Building, Madison Avenue at 34th Street, New York.

to Blake just what ought to be done about the State Board of Health, the State Board of Charities, the prisons, the reformatories, the asylums, about enforcing the laws in regard to Prohibition—about everything.

Pedley would sit very close to Blake, lean toward him, a thin, complacent smile on his dark, bearded face, and talk on and on in that monotonous voice; Blake felt as though he were being slowly anesthetized. But he hadn't the slightest intention of appointing Stibbard; however far he might go in yielding to the spirit of reform, he hadn't lost all of his political sense; the man whom he appointed, whether Matt or another, should be his own man, and not anyone else's.

"I shall take the matter under advisement, Senator," he said.

WHEN Pedley left, Blake went to one of the tall windows and threw up the sash, and took a deep breath of the cool winter air. He wondered what was the matter with him; he felt nervous, and half sick.

He looked down into the grounds around the State House; they lay now deep in snow, and across the pure, white, glistening surface of the snow, on the other side of the tall iron palisades, ran High Street, black and grimy; people were shuffling along in the slush, an ever-streaming crowd of them.

Each person there had his problem, perhaps, but none, surely, so difficult as his. . . . Now, if Matt would only be content with some less conspicuous place, and let him make it up in some other way, maybe . . .

But there, behind him, was Squire slipping into the room, with that expression of sympathy and concern which his pink face always wore when something was the matter. Confound it! Squire ought to get over that.

"Barney McGuire!" whispered Squire.

And Blake wondered what new complication the boss of the Democratic city machine had come to add to his problem. He had been glad enough to have McGuire's secret support in the elections, and he feared that McGuire had now come to demand his reward; but that was something that McGuire should have taken up with Matt; a governor wasn't supposed to know about such things.

McGuire came in with his heavy air, his Irish face wearing the expressionless, solemn mask that concealed the thoughts at work behind it. He took his seat and sat motionless and upright, his hands lying on his knees. His large head with its close-cropped iron-gray hair gave him, when sitting down, a dignity that he lacked when standing, for his body was small and his legs were short.

"Governor," he said, in his blunt way, fixing his small eyes on Blake's face, "you aren't looking well. You look troubled."

Blake was irritated by this tactless observation; a man oughtn't to say such things; he hadn't been feeling very well for days, but he wasn't going to let McGuire see that he was troubled, and so, trying for a careless smile, he said:

"Oh, I'm all right, Barney, just a little tired, that's all. I've got this Legislature on my hands, and then I've been a good deal worried by this business of the Public Utilities Commissioner." He might as well take the bull by the horns—in case McGuire had come to discuss that ticklish subject—and there was a certain advantage in being the first to mention the thing, to beat him to it.

"What do you want to let that worry you for?" asked McGuire.

What did he want to let that worry him for! Humph!

"Why don't you tell 'em to get to thunder out o' here, name your man, and be done with it?"

"Does it seem so easy to you?"

"Nothin's easy, y'understand, Guv'nor, and the longer you put it off the harder it gets."

"But you don't know, Barney, what pressure is being brought to bear on me."

"You mean this fellow Pedley—them guys?"

The Governor nodded.

"What do you want to pay any attention to them for? If you'd let 'em name every man in your administration, y'understand, they'd only double-cross you, and have 'em all out workin' agin you the first time you wanted annythin'!"

"But it's not only those fellows, Barney; there's a wide-spread public opinion reflected in the newspapers, everywhere, in fact, a very strong feeling; I am conscious of it every day of my life. I hear it on all sides; it comes to me constantly; I get letters, telegrams—look at that—" and Blake flicked the pile of letters lying on his table. "I've got to think of the people, you know."

McGuire cast an indifferent glance at the pile of letters, and then, fixing his small eyes gravely on Blake, he moved for the first time since he had taken his seat, moved sufficiently, that is, to raise one hand from his knee, and to wave a forefinger slowly, from side to side in a negative gesture.

"Nothin' in that, y'understand, Guv'nor's. Election's a long way off."

BLAKE didn't like those little eyes to fix themselves so steadily and imperturbably upon him, or that hand to wave slowly from side to side in its dissuading, disenchanting gesture; he turned in his chair and gazed out of the window at a thick fleece of wet snow that lay along the black limb of a tree. Presently, almost to his relief, McGuire was speaking again, in his low, soft Irish voice.

"Guv'nor," he said, "it isn't any of my business, y'understand, and I don't want to butt in. It's a matter that concerns just you and our friend, the big fellow—you know who I mean. I was fer you in the election, and I'm fer you now, right or wrong. I've got eleven votes in the House and three in the Senate, and they're yours, y'understand, any time you want 'em, exceptin' on a strict party vote. There's nothin' in it for me, y'understand; but listen, Guv'nor, you can't afford to have the boys, the regular fellows, think you'd throw down a friend!"

These last words fell plump in the stillness of the room. Blake gave a start; the old, practical politician in him had been touched. He felt that McGuire had caught him back from an abyss of dishonor.

"I hope you'll excuse me, Guv'nor," McGuire went on. "As I just told you, I ain't buttin' in. It's your appointment, y'understand. Course, we'd all like to see the big 'un get it; he's entitled to it, and he expects it. Not that he cares so much about the place, but it's the recognition, y'understand, that he wants. I'm just tellin' you how he feels, y'understand, not buttin' in."

THROW down a friend! Blake thought of McGuire's words all that day. They formed the device, the motto of the politician, and they recalled to him the standard of professional conduct. You can't afford to have the boys, the regular fellows, think that you'd throw down a friend. No, decidedly not.

And yet there were those letters, those protests, the opinions, not only of reformers like Pedley and Mills, but of decent fellows, like Laurence Price. And there were the people. That night of his inauguration, the State House dome, the flag in the white illumination, and those resolutions! He was going to show them that an old machine politician could serve the people as well as anybody. How easy it had seemed that night!

He had better walk home; the air and a little exercise would do him good after such a long, hard day, seeing people, listening to their requests, their advice, their complaints. He couldn't please them all. Every time he pleased one he offended a dozen or a hundred, maybe thousands.

The State House was empty at that hour. The Senate and House had long since adjourned, the members had gone to their hotels, and all their followers, hangers-on, lobbyists, had gone with them. When five o'clock came, all the clerks punctually went home; but he couldn't, and he was the Governor. Even when he went home, he took all his cares with him, took them to bed with him.

His heels echoed loudly, lonesomely, on the marble floor as he crossed the rotunda. Overhead the vast dome lifted itself, its perpetual twilight deepened into the soft purple dusk of a winter evening; its obscurity trailed down into the rotunda, illuminated like fog with a glimmering light, through which the red lamp at the cigar stand glowed. The negro bootblack was shining a man's shoes, in rag-time, with a taut strip of cloth. One of Representative Small's fellows, that bootblack, from the Third Ward in the city.

Blake looked up into the dome; there was something mysterious in that enormous inverted bowl, something inscrutable and weird. It was like a vast mind, in brooding meditation. What it must know, that enormous mind! What a lot of things that dome had seen—and covered!

He heard the man who was having his shoes shined say:

"So that's the new Governor, eh?"

"Yes, suh," the bootblack answered, "dat shuah is de new Guv'nah. He's a regular fellah, he is."

Blake went down the long, wide flight of stone steps that descended from the portico, out into the soft moist air of a thawing evening. Regular fellow . . . You can't afford to have the regular fellows think . . . Throw down a friend . . .

He looked back over his shoulder and up at the dome, gray and blurred in the dark wintry sky, brooding, pondering something in its mind. But what?

(*To be continued*)

ELECTRICITY has done much to make homes safe for children. It has almost totally eliminated old-fashioned open-flame lighting —a menace that existed for many, many years. It has given the youngsters an illuminated Christmas Tree without the former fire hazard.

Modern invention has brought many other safeguards against the dangers of fire. Protect your children by using them—especially those that lessen the use of matches.

Have electric flash-lights handy for searching in closets, storerooms and cellars; and electric lighters for smokers' use. Avoid open ash-trays that may leave smouldering cigarette-ends exposed to drafts and to contact with inflammable materials.

Whenever you buy anything for your home, consider its safety from the fire standpoint.

The North America Agent can advise you on modern, practical methods of protecting your home against fire. Consult with him.

THE FAMILY'S PROBLEMS

Thank the Lord, I'm No Longer a Perfect Housekeeper!

THE greatest discovery of my life came when I realized that houses are not primarily objects to be dusted and scrubbed and slaved over from morning to night.

My first experience in housekeeping was of course, thrilling, for then I was a bride. With just two to keep house for, it was like playing dolls on a large scale. And how I had liked to play dolls! Naturally, I kept my house scrupulously clean in those first few years. It was so easy then.

But when the babies began to come, how things changed!

With the first baby I began to let things lapse, at first slightly; but by the time my son reached the toddling age the lapse from good housekeeping was indeed noticeable. However, so small a matter as not being able to keep my house immaculate did not in the least trouble me. Just one smile or "goo" from my boy more than made up for the change in my home. Any old time I could clean house, but only once would I have my first baby to play with. I had sense in those days!

If my housekeeping suffered with the advent of son number one, it almost ceased to be with the arrival of number two. As the boys grew older, they played all over the house, while I looked on delightedly. And when my rancher husband entered the door, the children immediately clambered all over him, ready for a romp.

From one room to another they would go, playing hide-and-seek in and out the closets, behind tables and chairs, pulling things down as they went. Or, down on his all-fours my husband would go, with both babies on his back screeching and screaming and digging their heels into his sides to keep from falling.

OH, THEY had a marvelous time of it and all the while my housekeeping was going from bad to worse. And still I didn't worry. Finally, however, I awoke to the fact that my babies were no longer babies, and therefore no more an excuse for my poor housekeeping.

I must right-about-face, and not only improve my housekeeping but also train my boys to help in keeping things in order.

Madly and feverishly I returned to my old schedule. Now that I had no babies to take up my time, housekeeping once more became a mania with me. I was soon a slave to my house.

Every nook and every corner must be free of dust every day and every hour. No germ must show its face in my house! Day in and day out, week in and week out, it was the same mad rush to clean the house spotlessly every time. No matter if I was too tired to talk when my menfolks came in, the house they came home to must be clean.

And what was the result?

No more was there hilarity and spontaneous joy, as in the old days. I began to nag when things did not please me. My house looked stiff-starched; my children looked ill at ease; my husband looked bored. And I? I looked like a cross between an early Christian martyr and a dishrag.

Jaded and worn, tired and old before my time, the only redeeming feature about the whole thing was that I had a good conscience. I was doing my duty to my family—as I saw it.

Then I was taken ill. A nervous breakdown, the doctors said. Now, a nervous illness is the sickest sickness in the world; so I gave up. I thought I had finished my course. But, like Paul, I could say I had fought the good fight, even though my weapons were nothing more formidable than mop and broom.

THUS, sick and nervous, too tired almost to lift a finger, I did a great deal of thinking. One day the thought came to me almost as an inspiration: "Why, houses are made to live in, not just to keep clean all the time!"

"To live in! To live in!"

How the thought persisted and fascinated me. Why, we hadn't truly lived in our house since the day I recovered from my lapse in good housekeeping, and that now had been several years. But how truly we had lived those years when the babies were little and I hadn't much time for keeping things immaculate.

How I longed for the old days again!

My aim then had been to keep my family happy and comfortable; now it was to be a perfect housekeeper. I had crowded out the greatest for the least.

This new idea took possession of me, and acted like a tonic. I was soon up and able to take charge of my housework again, but not in the old way.

To an outsider my house looks clean, and it is as clean as health and comfort demand. Twice a year, with outside help, I give my house a thorough cleaning. Once a week I vacuum sweep, mop and dust. I do put things in order every day, and everything in its place. That is one bad habit even my illness could not efface.

But I have grown quite friendly with the clean dirt that just will blow in from the outside, even into the best regulated homes. Why, where I used to regard dust as my arch enemy and rush with mop to slay it, I now feel positively friendly toward it. Sometimes, with so much time on my hands, I even sit down and draw with my finger fantastic designs on the dust-covered library table.

Yes, after years I have learned that houses are made to live in, and not just to give employment to housewives every day and every minute of the day. My nerves are back to normal, and my husband feels at home again in his own house. My boys have become almost as frolicsome as when they were babies and did not feel the restraint that perfect housekeeping imposes upon everyone.
